THE

NINETY-FOURTH ANNUAL REPORT

FOR THE YEAR 1907.

The committee appointed by the Trustees to prepare the Annual Report to the Corporation have the honor to submit the following:

LAND.

The real estate of the Corporation has been increased during the year by the purchase of about one (1) acre of land at Waverley with the dwelling-house and barn thereon. This land is a desirable acquisition as its situation makes it important for the Hospital to control it.

BUILDINGS.

The Codman House at Waverley has been in full operation during the year and has been successful and satisfactory in every way.

At the General Hospital in Boston a new orthopedic ward has been finished and was opened Nov. 6, 1907. It contains eighteen (18) beds and four (4) cribs and has proved to be admirably adapted to its purposes.

The Tower, containing the service rooms of the medical wards, in the main Bulfinch Building has been re-arranged and renovated during the year and appliances have been there provided for keeping hot the food for the patients and for sterilizing all dishes and utensils.

Four of the medical wards have been repainted during the year. During the repairs in the summer the experiment was made of supplying the place of one ward by the use of seven (7) or eight (8) tents pitched in the Hospital Grounds. The use of these was found very satisfactory.

The buildings belonging to the Hospital are all in good condition.

It was again found necessary to make a very large outlay in fighting the gipsy and the brown-tail moths, but it is hoped that this expense will be less in the future.

FINANCIAL.

The annual deficit of the institution as a whole for 1907 is $14,829.27.

STATISTICAL.

AT THE GENERAL HOSPITAL IN BOSTON.

The comparison of expenses and receipts for the year 1907, with those of 1906, is as follows:

	1906.	1907.
Expenses	$256,367.30	$275,033.31
Received from Patients	93,053.46	98,169.76
	$163,313.84	$176,863.55
Income received from Special Funds and Free Bed Subscriptions	134,737.33	160,977.12
	$28,576.51	$15,886.43

The Income from various Special Funds and Free Bed Subscriptions shows an increase of	$26,239.79
Receipts from Patients show an increase of	5,116.30

The total number of patients admitted during the year was 5,517, against 5,075 in 1906. The daily average was 279, against 272 in 1906. The total number treated during the year was 5,793.

The number of free patients treated during the year was 3,285, against 2,850 in 1906, and the number of paying patients in whole or in part was 2,232.

In the Out-Patient Department the number of new cases treated was 20,358, against 20,010 in 1906.

The total number of visits from these patients was 107,063; the average daily attendance was 351, and the total number of prescriptions filled was 43,674.

The number of patients treated in the Accident Room was 5,802, against 5, 521 in 1906.

The average number of days during which patients have remained in the Hospital during the year was 20+, against 21 in 1906.

THE CONVALESCENT HOME IN WAVERLEY.

The comparison of expenses and receipts for 1907 and 1906 is as follows:

	1906.	1907.
Expenses	$10,987.77	$11,997.42
Received from Patients	3,641.83	3,645.30
	$7,345.94	$8,352.12
Income from Special Funds . . .	7,281.00	7,281.00
Deficit borne by General Fund . .	$64.94	$1,071.12

The total number of patients admitted during the year was 563, against 500 in 1906; the daily average was 26+, against 23 in 1906.

THE McLEAN HOSPITAL IN WAVERLEY.

The comparison of expenses and receipts for 1907 and 1906 is as follows:

	1906.	1907.
Expenses	$246,694.05	$275,158.24
Received from Patients	231,944.45	264,408.86
	$14,749.60	$10,749.38
Income from Special Funds	16,912.75	16,912.75
To credit of General Funds	$2,163.15	$6,163.37
Receipts from Patients show an increase of		32,464.41
Expenses show an increase of		28,464.19

The total number of cases treated during the year was 373, against 326 in 1906, and the daily average number of patients in the Hospital was 200, against 184 in 1906.

The average duration of illness, from the beginning of the attacks in 42 cases recovered, was 20.8 months, and the average duration of their residence in the Hospital was 9.9 months. The average weekly cost per patient in 1907 was $25.68, against $25.99 in 1906.

SUMMARY.

The total expenses in all departments exceeded the receipts and income by $14,829.27, 1907, compared with $28,153.24, 1906, thus:

	1906.	1907.
General Hospital in Boston . .	$28,576.51	$15,886.43
McLean Hospital.	2,163.15 Credit	6,163.37 Credit
Convalescent Home	64.94	1,071.12
Over expenditure of Income of Sundry Funds	1,674.94	4,572.19
	$28,153.24	$14,829.27

OFFICERS AND STAFF.

No changes have occurred in the Board of Trustees during the year.

In the Staff there have been the following changes: The term of office of Dr. Henry H. A. Beach expired and Dr. Arthur T. Cabot and Dr. George L. Walton resigned their positions. The resignations of these gentlemen were accepted by the Board of Trustees, and the appreciation of the Board of the long and faithful services of Drs. Beach, Cabot, and Walton was expressed by votes which were communicated to those gentlemen, who will serve us as members of the Consulting Staff.

The vacancies upon the Staff were filled by the appointment of Dr. Franklin G. Balch in place of Dr. Cabot, of Dr. Henry C. Baldwin in place of Dr. Walton, and of Dr. Charles A. Porter in place of Dr. Beach.

Mr. Solomon Lincoln, who had long served the Hospital with ability and devotion as its counsel, died during the year.

ADMINISTRATION.

This year has been the tenth of the service of Dr. Howard as Resident Physician at the General Hospital in Boston, and during the past two years he has also been Administrator of the whole institution. At the suggestion of the Board of Trustees, he has been enjoying a long vacation, which we feel will refresh and invigorate him for his future labors in the Hospital.

Dr. Joseph B. Howland has been appointed Second Assistant Resident Physician in Boston.

The Board of Trustees voted, Nov. 29, 1907, to secure annually a speaker of eminence to make an address as part of the ceremonies commemorative of the first administration of ether in the Hospital on Oct. 16, 1846. The Trustees desire to make the celebration of this day more and more impressive as time goes on. The Hospital may well be proud of the fact that the first surgical administration of ether took place within its walls and that it is thus identified with one of the most momentous events in the history of humanity.

DEPARTMENT OF SCIENTIFIC RESEARCH.

The report of Dr. Wright, which is appended, will show our progress here. The wonderful advances of medical science during the past thirty years and the promise of the future combine to make this department one of the most interesting and important of the whole institution, as it is always, and at every moment, possible that some new discovery may be made, and the progress and the discoveries which this department has already made have attracted the attention and received the approval of the most eminent minds in America and abroad.

No pains have been spared to make the department effective as an instrumentality of study and experiment, and those who give money to the Hospital may well feel that they are aiding most intelligent and painstaking efforts to find new agencies to repress and cure disease and pain.

COMPARATIVE STATEMENT.

The following comparative statement of the number of patients treated in the House and in the Out-

Patient Department, and the number of beds, the number of operations performed, the number of employees, and the expenses of the Hospital in Boston in the different years, 1887, 1897, and 1907, will be found to be interesting.

	Expense 1887.	*Expense* 1897.	*Expense* 1907.
General Hospital	$120,881.61	$171,469.60	$275,033.31
McLean Hospital	139,497.70	202,454.18	275,158.24
Convalescent Home . . .	9,201.49	9,594.25	11,997.42
	$269,580.80	$383,518.03	$574,133.23

NUMBER OF PATIENTS TREATED IN HOUSE.

	1887.	1897.	1907.
General Hospital	3,015	4,312	5,793
McLean Hospital	242	287	373
Convalescent Home	327	386	588

NUMBER OF PATIENTS TREATED IN OUT-PATIENT DEPARTMENT GENERAL HOSPITAL.

1887.	1897.	1907.
48,913	92,737	107,063

NUMBER OF OPERATIONS PERFORMED IN GENERAL HOSPITAL.

1887.	1897.	1907.
* ———	1,730	3,208

* Statistics not available.

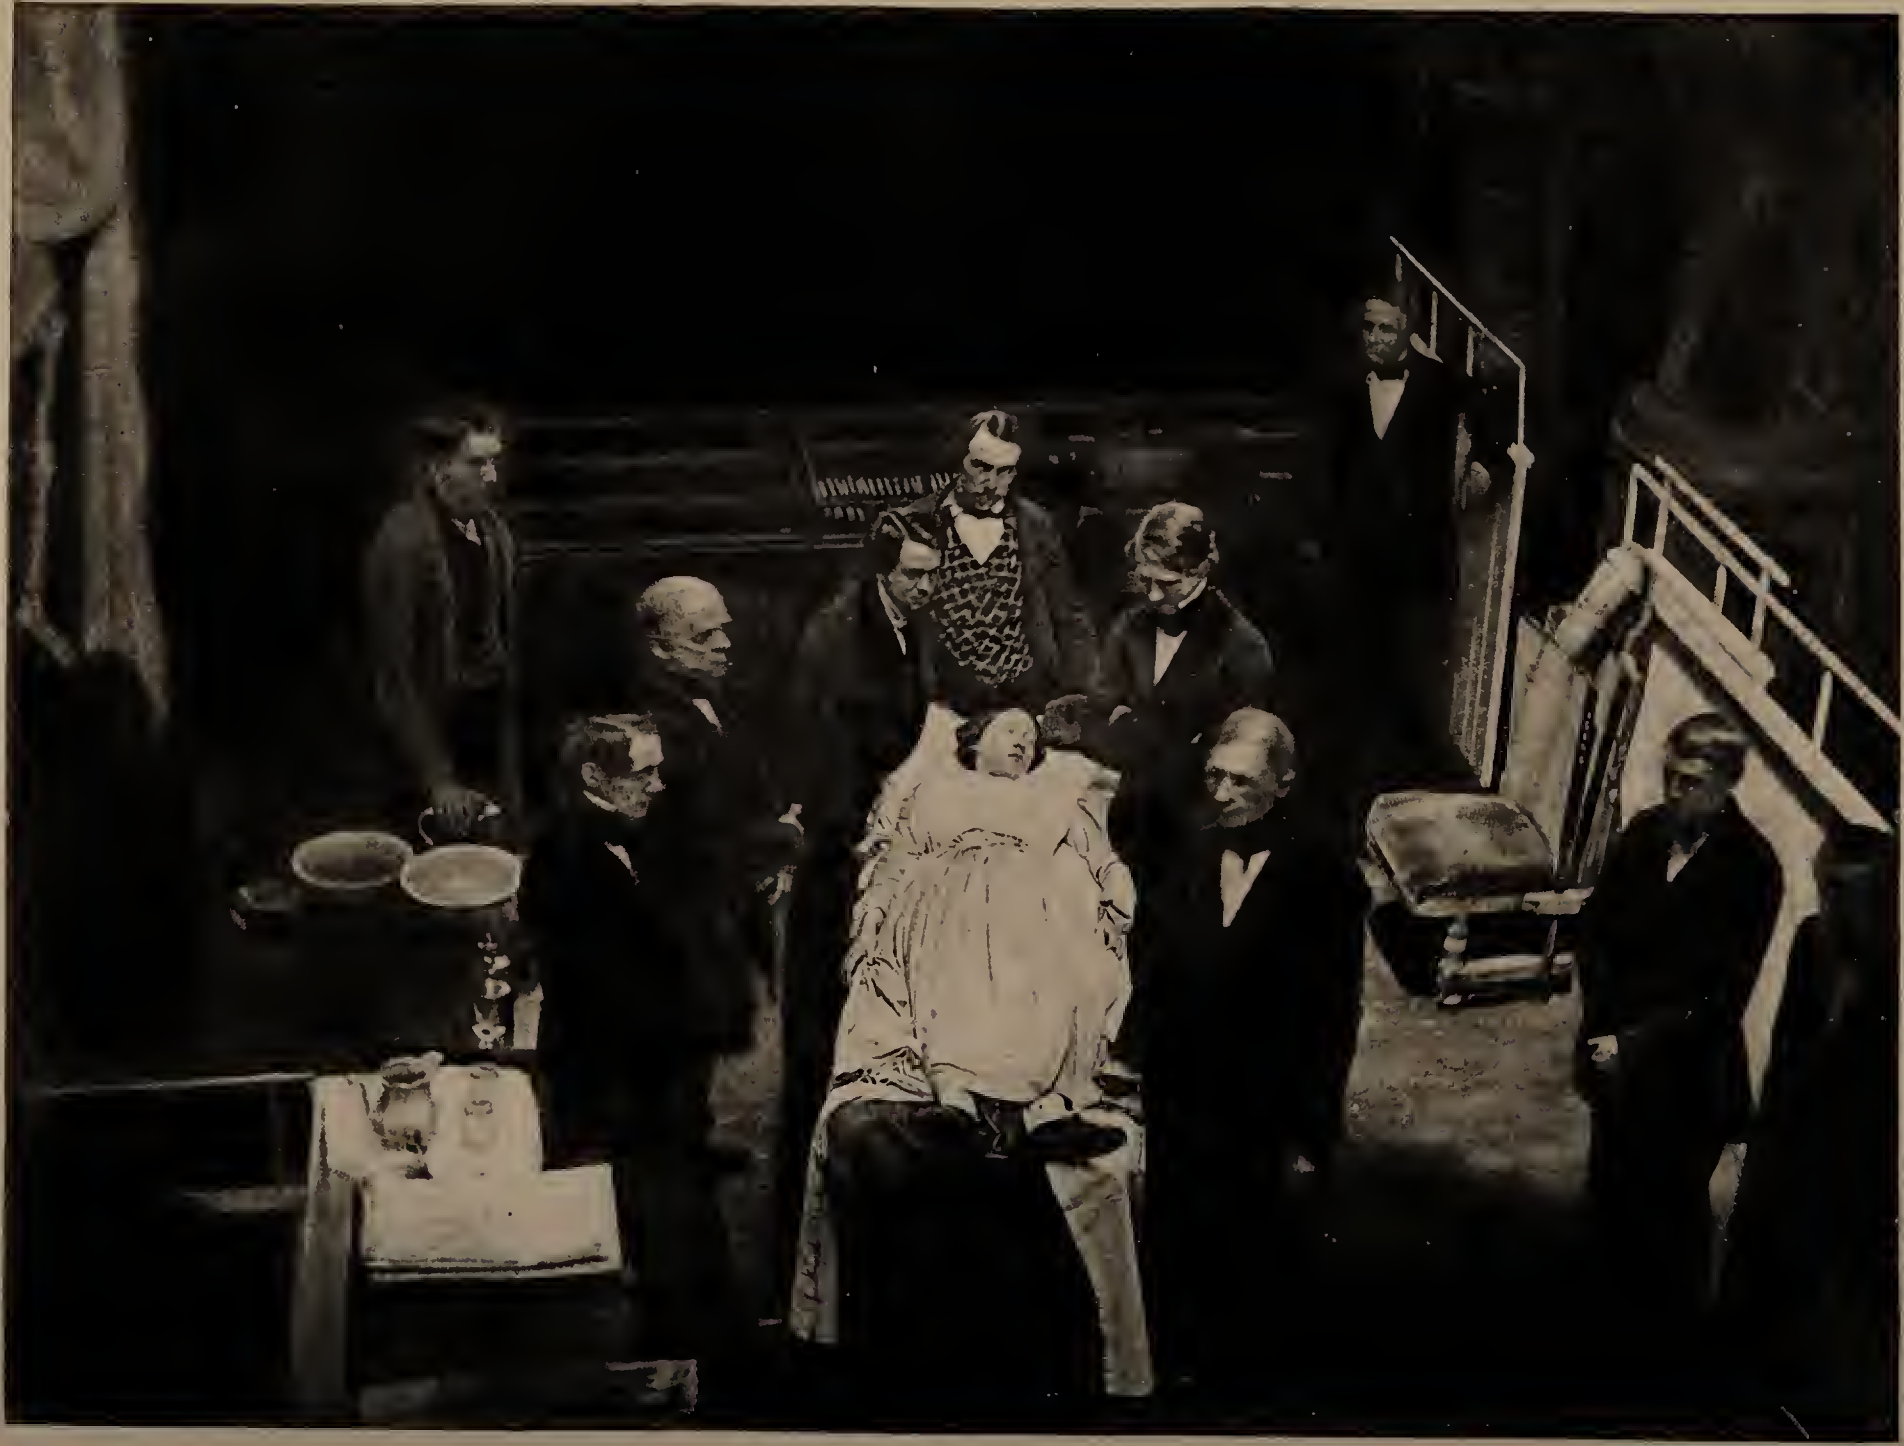
NUMBER OF EMPLOYEES.

	1887.	1897.	1907.
General Hospital	174	221	365
McLean Hospital	169	256	320
Convalescent Home	11	13	11

NUMBER OF BEDS.

	1887.	1897.	1907.
General Hospital	230	261	321
McLean Hospital	180	180	220
Convalescent Home	32	32	32

It is certainly an impressive fact that 5,800 persons should have been treated in the beds of the Hospital during the year 1907, and also that persons should have been treated 107,000 times during the same period in the Out-Patient Department, and anyone who traces the growth of the Institution in this statement must appreciate the constant expansion of the needs and of the work of the Hospital. Few people probably, however, are aware that although we treated 5,800 persons in our beds during the year, we had to refuse at least 5,800 worthy cases because we could not provide for them. Of the 5,800 cases treated, 3,429 were without charge. As we have said in our late reports, the public should bear in mind that this Hospital has not been subsidized by state or city since the state gave it the Province House nearly a hundred years ago, and is dependent for its work upon the contributions of benevolent people, and that no money which is given in charity can be surer of being applied to God's work on earth than that which is given to this Institution. The past history of the Hospital from its early days must be forever an inspiration to the people of Massachusetts and we have no fear that they will ever fail to give it a generous support; but our needs are ever present and constantly increasing, as the foregoing statement shows. We try in every way to practice intelligent economy and stretch our resources to the farthest point which is consistent with tender care



for our suffering patients, but even thus, as above stated, we are compelled to turn away many who are persons worthy to be received and relieved, though we now care for many more in proportion to the number of our beds than we did ten or twenty years ago.

Moses Williams,
Francis L. Higginson,
Committee of Annual Report.

Massachusetts General Hospital,
Dec. 31, 1907.

DONATIONS FOR 1907.

The Committee on the Book of Donations reports that the following donations and legacies have been received during the year :

Donation of a friend	$1,000.00
Legacy under the will of Charles E. French	10,000.00
Donation of Mrs. James J. Storrow	25.00
Donation of Henry Mulliken	500.00
Part of bequest of Anna S. C. Prince	500.00
Donation of Miss Georgina Lowell	25.00
Donation of Wm. Amory	50.00
Donation of Miss Longfellow	5.00
Legacy under the will of Charles Merriam, for free beds	5,000.00
Donations of Mrs. R. G. Shaw	100.00
Donation from a former patient, received through Dr. George T. Tuttle	5.00
Donation of Miss A. D. Blake	25.00
Gift from the estate of the late Thomas Wigglesworth	5,000.00
From donors to Orthopedic Ward and Scientific Fund by Dr. Joel E. Goldthwait	24,748.64
	$46,983.64
Received in subscriptions for free beds for 1907	19,200.00
	$66,183.64

And that these sums have been entered in the Book of Donations in the usual form.

George Wigglesworth,
Committee on the Book of Donations.

Massachusetts General Hospital,
Dec. 31, 1907.

REPORT OF THE TREASURER.

In accordance with the Fifth Article of the By-Laws, the Annual Report of the accounts of the Massachusetts General Hospital, made up to the last day of December, 1907, is respectfully submitted, to be laid before the Corporation at its annual meeting.

Examinations of Accounts.

BOSTON, Feb. 7, 1908.

To the Committee on Accounts,
Massachusetts General Hospital:

I hereby certify that I have examined the books of the Convalescent Home, McLean Hospital, General Hospital, and of the Treasurer, for the year ending Dec. 31, 1907, as follows, viz.:

The cash books, journalizings, and the trial balance, and I found the same correct. There are vouchers, or satisfactory evidence of payment for the cash disbursements.

I found cash, cash vouchers, and cash in the banks as per amounts called for by the cash books.

The accounts on the Treasurer's books agree with the accounts on the books at the McLean and General Hospitals.

I found bonds and stock certificates as per bond and stock accounts, and notes as per note receivable account on the trial balance herewith.

WALDO L. ABBOTT,
Auditor.

THE LADIES' VISITING COMMITTEE.

The Ladies' Visiting Committee, on their reorganization over a year ago, instituted monthly meetings which they feel have increased the efficiency of their work. The meeting each month of the visiting members of their Committee with the Visiting Trustees has been very helpful to their Committee, and they believe it has been productive of good results.

The development of the patients' library, the increased facilities for procuring books, and the larger distribution of books throughout the wards has proved of great benefit to the patients. The Committee appreciate the co-operation of the Trustees in this work, as well as in the establishment of a light lunch in the Out-Patient Department, in response to their suggestion.

The general work of the Ladies' Visiting Committee is so largely individual that it is not easy to give an account of it in detail. They aim, by sympathy and advice, and sometimes by a helping hand, to supplement the work of nurses and physicians who can, of necessity, give little time to individual cases. They have been much impressed with the pleasant relations existing between patients and nurses, often shown by expressions of gratitude on the one hand and by a strong personal interest on the other.

This Committee wishes to express their appreciation of the courtesy which they have received from the Trustees, from the Officers of the Hospital, and from all who are connected with its various departments. They hope, by persistent and systematic endeavor, that their efforts may help to promote, in some measure, the best interests of the Hospital.

CHARLOTTE S. SPRAGUE,
Secretary for the Ladies' Visiting Committee.
Dec. 19, 1907.

PLAN FIRST FLOOR, ORTHOPEDIC WARD I, GENERAL HOSPITAL

ANNUAL REPORT OF THE ADMINISTRATOR OF THE MASSACHUSETTS GENERAL HOSPITAL AND RESIDENT PHYSICIAN OF THE GENERAL HOSPITAL.

To the Trustees of the Massachusetts General Hospital:

In the absence on vacation of Dr. Herbert B. Howard, I have the honor to submit the following report for the year 1907.

The general rise in the price of supplies noted in last year's report has continued throughout 1907, and this higher cost of living is shown by the increased expenditures of all three institutions. Fortunately this has been offset by increased revenue, so that the total deficit is about half what it was last year.

At the McLean Hospital the Codman House has been opened and has proved satisfactory to the administration and to the medical officers in charge. This increases the capacity of the Hospital by 40 beds, making a total of 220 beds.

The contest with the gipsy and the brown-tail moths has cost the Hospital $6,782.56. The grounds are now well cleaned of underbrush, unnecessary trees, and old stonewalls so that we hope another year will show a much smaller expenditure for this purpose.

At the General Hospital the Orthopedic Ward was opened on November 6, and has proved to be a very satisfactory building to the administration and Orthopedic Surgeons. This increases the capacity of the Hospital by 18 beds and 4 cribs, making a total of 321 beds. The maintenance of this ward must be met, however, almost entirely by the income from the General Fund of the Hospital, as very little can be collected for board of patients because of the chronic character of the cases ; for, as a rule, these patients have had no earning capacity for a long period before their admission to the Hospital, and have none for some time after their discharge.

The medical wards in the old building have been re-painted and their ventilating system somewhat improved. The tower containing the serving-rooms has been re-arranged and apparatus installed for keeping the food hot while it is being served, and for disinfecting utensils. During the summer months the patients from one of these medical wards were housed in tents at the western end of the Hospital Grounds. It was found that the patients were contented and pleased, and the nurses and attendants gained in health and strength during this out-door life.

Dr. Joseph B. Howland, until recently Superintendent of the State Colony for the Insane, has been appointed upon the Administrative Staff.

Miss Pauline L. Dolliver, Superintendent of Nurses, has enjoyed a vacation during the last six months of the year. The position of Superintendent of Nurses was filled during her absence by Miss Annabella McCrae, whose duties have been performed faithfully and ably.

There is an increased number of graduate and pupil nurses. This is necessary because of the demands of the Medical Staff and because of our efforts to do our work a little better each year than the year before. The details of the Training School year will be found in the report of the Superintendent of Nurses.

Mr. Walter J. Dodd has been appointed Skiagrapher. The generosity of a constant friend of the Hospital has made it possible for us to have the benefit of improvements in X-Ray machines without calling upon the resources of the Institution. During the past year two large X-Ray machines have been added to the equipment of this department. One of the most recent applications of radiography is to diseases of the frontal and accessory sinuses. The Hospital has been well in advance in this work.

The Medico-Mechanical Department lost the services of Dr. Max Böhm in the spring, and since that time we have had a provisional head of the department. Another year will show this department upon a more settled basis.

No Dalton Scholarship was awarded this year. There were sixteen competitors for the Warren Prize. Essays were submitted in competition from Germany, Italy, Denmark, England, and America. The prize was awarded to Dr. Aldo Perroncito, University of Pavia, Pavia, Italy, for a very able essay upon the regeneration of the nerves.

The Wooden Leg Shop has manufactured twenty-two legs and two hands this year.

Ether Day was observed this year by opening the Orthopedic Ward for inspection.

At the Convalescent Home the year has been without remarkable incident. From motives of economy, the stable has been closed and the horse and carriages kept at the McLean Hospital stable.

The average number of patients in the General Hospital during the year was 279.

Paying patients were entered at the following rates per week: 1 at $70.00; 56 at $35.00; 27 at $23.34; 145 at $21.00; 1 at $20.00; 1 at $17.50; 6 at $15.00; 19 at $14.00; 1,345 at $10.50; 41 at $10.00; 17 at $8.00; 6 at $7.50; 475 at $7.00; 26 at $6.00; 1 at $5.50; 27 at $5.25; 292 at $5.00; 55 at $4.00; 1 at $3.50; 105 at $3.00; 3 at $2.50; 59 at $2.00; 3 at $1.50; 4 at $1.00.

Whole number of patients treated during the year:

Paying	2,189
Paying part of the time	175
Free	3,429
Total	5,793

The proportion of deaths to the whole number admitted was 8.53.

There were 5,802 patients treated in the Accident Ward. Of this number 1,829 were retained in the Hospital.

The greatest number of patients at one time was 307.

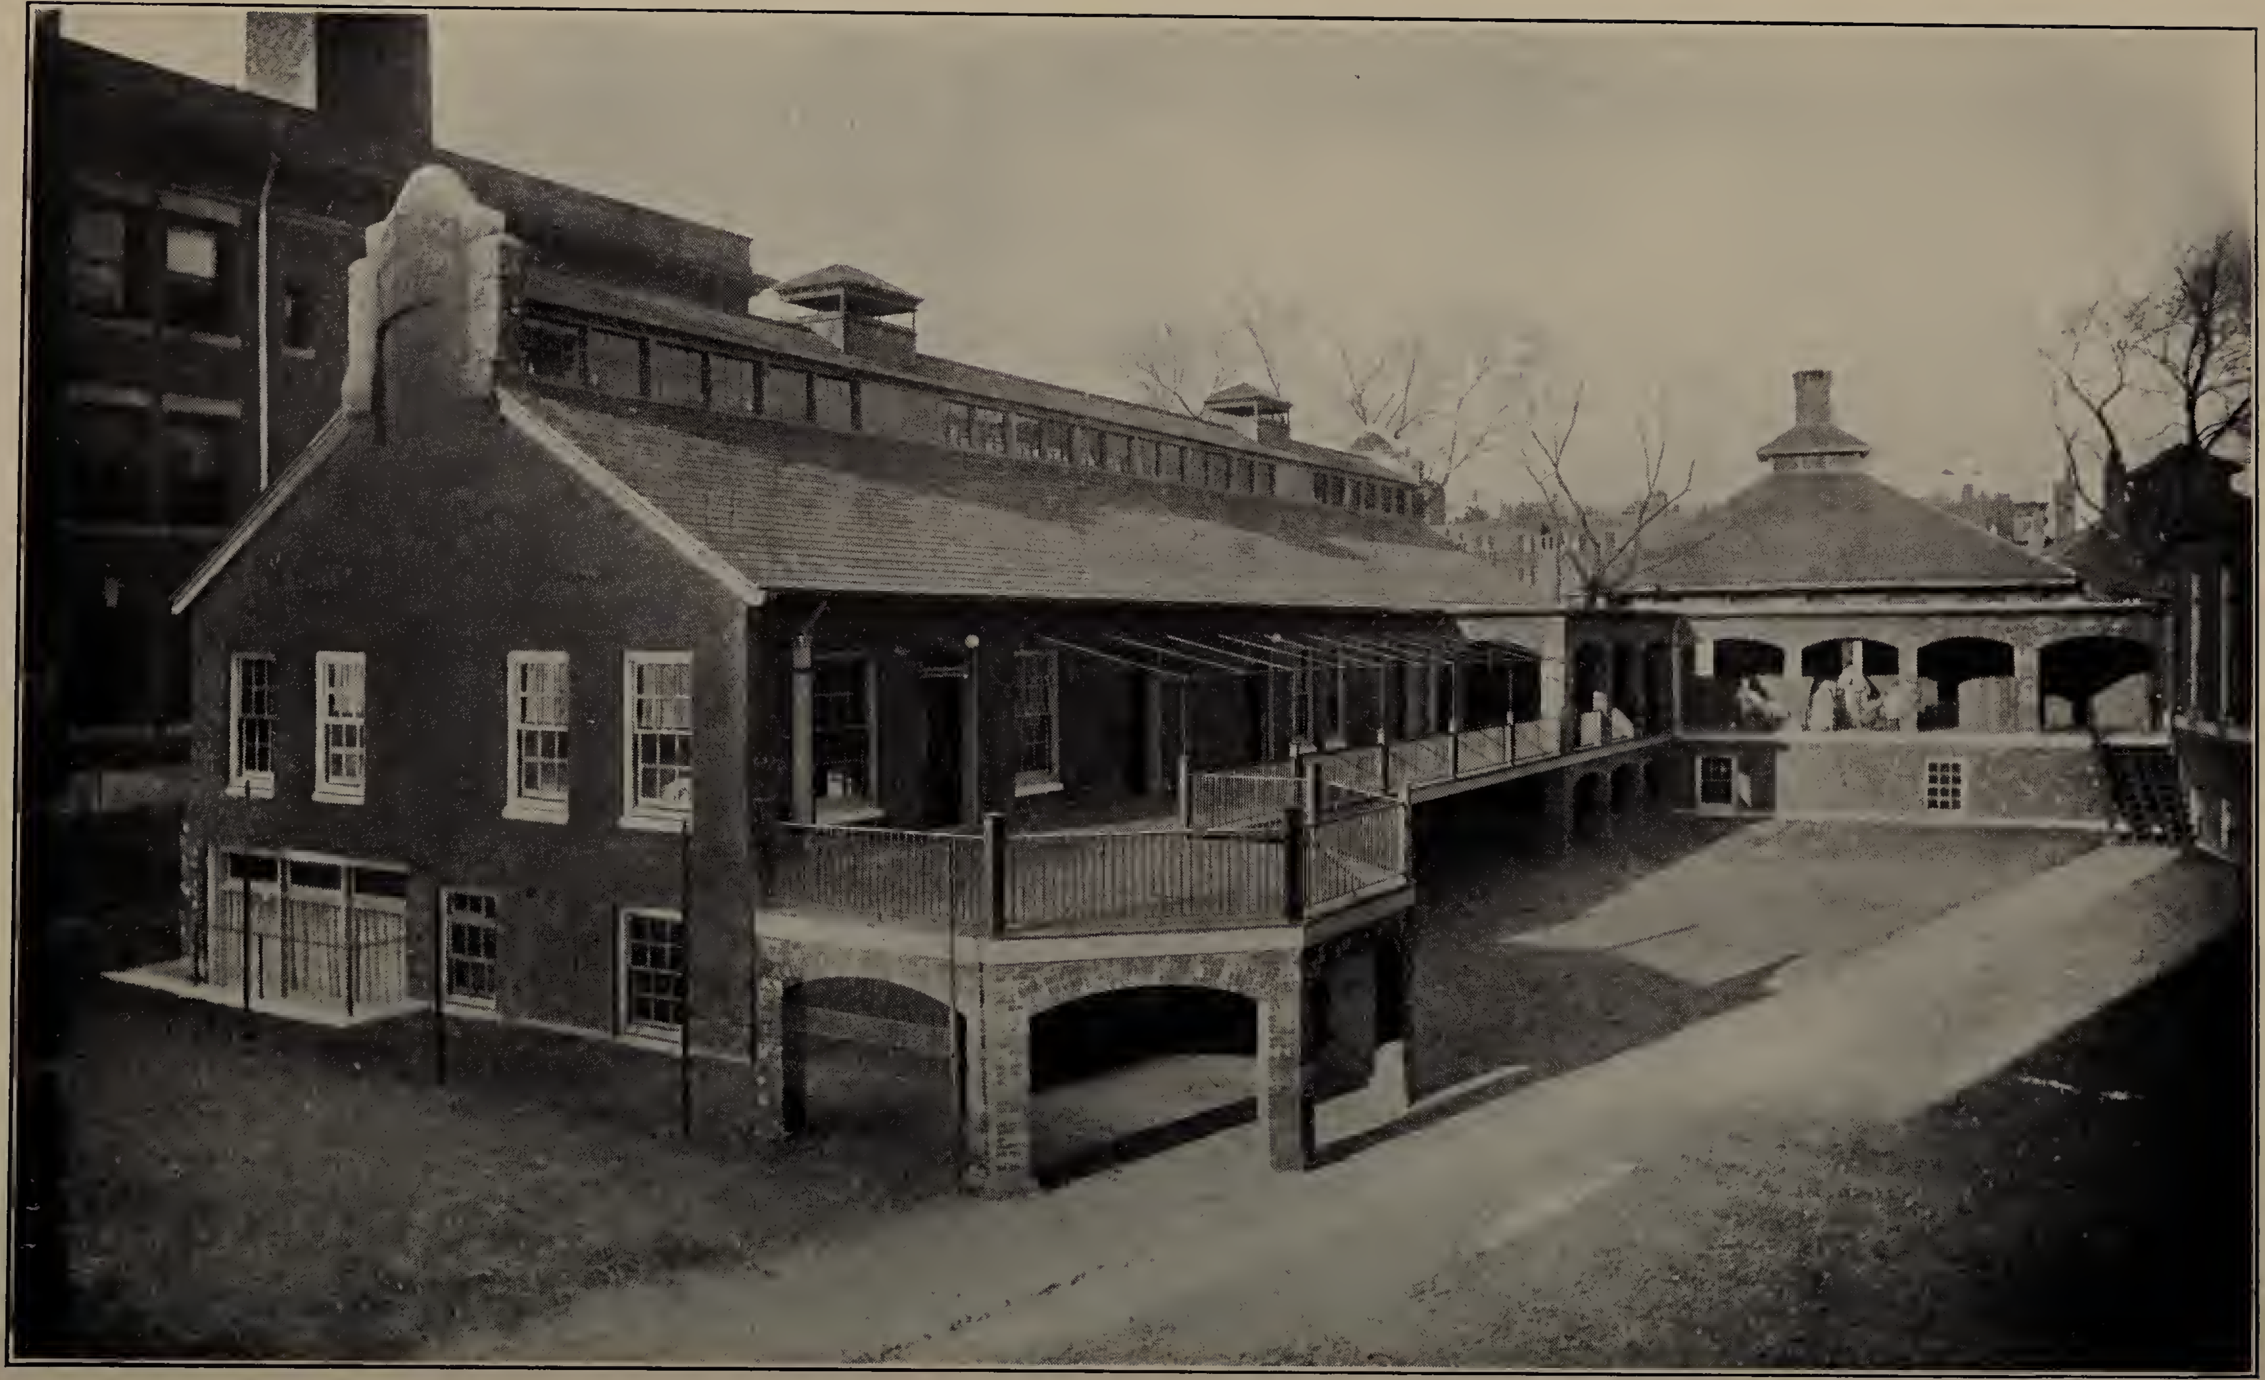
The least number of patients at one time was 252.

The total number of days for patients was:

Paying	48,674
Free	53,435
Total	102,109

The average time of paying and free patients was 18 + days.

The per capita weekly cost per house patient this year at the General Hospital has been $15.07. The price of board in the open ward is still $10.50



ORTHOPEDIC WARD I, GENERAL HOSPITAL

per week, a rate made many years ago when the cost of living was much lower than now.

The applicants for treatment at the Out-Patient Department this year numbered 22,819. Of this number 20,358 received treatment, 683 were referred to other institutions, and 1,778 were not considered proper persons to be treated in a charitable institution.

Number of ambulance trips,	1,535	Miles, 5,164
Number of carriage trips,	766	Miles, 2,338
	2,301	7,502

Number of prescriptions filled in the Out-Patient Department in 1907	43,674

Number of X-Ray cases taken in the Out-Patient Department	2,420
Number of X-Ray cases taken in the House	1,064
	3,484

The total number of days for patients at the Convalescent Home was 9,735.

The average time for paying and free patients at the Hospital and Convalescent Home was 20 + days.

I wish to express my thanks to your honorable board for the courtesy and consideration extended to the administrative officers of the Hospital, and to express my appreciation of the support of faithful and loyal officers and employees.

Very respectfully,

FREDERIC A. WASHBURN, JR., M.D.

Acting Administrator.

TABLE No. 1.

Number of Patients in the Hospital Jan. 1, 1907.

Paying	132
Free	144
Total	276

Admitted from Jan. 1, 1907, to Jan. 1, 1908.

	Male.	*Female.*	*Total.*
Patients paying board	1,161	896	2,057
Patients paying board part of the time	108	67	175
Patients entirely free	1,939	1,346	3,285
	3,208	2,309	5,517

Medical	2,021
Surgical	3,496
Children (included above)	724

Discharged During the Year.

	Medical.	*Surgical.*	*Male.*	*Female.*	*Total.*
Well	585	553	618	520	1,138
Much relieved	330	1,284	899	715	1,614
Relieved	536	1,267	1,125	678	1,803
Not relieved	190	58	138	110	248
Dead	237	234	317	154	471
Against advice	26	51	38	39	77
Not treated	9	155	91	73	164
Eloped	2	1	3	0	3
	1,915	3,603	3,229	2,289	5,518

During the year there were 104 more transferred from the medical service to the surgical service than from the surgical service to the medical service, which accounts for the discrepancy above.

Number of Patients Remaining Dec. 31, 1907.

REPORT OF TRAINING SCHOOL FOR NURSES.

The increased number of pupils in 1906 has been maintained through the past year and to meet the needs of the Hospital a still larger number will be received during this year. The Thayer was taxed beyond its capacity when the autumn probationers entered and cots had to be put up in several rooms. As the older nurses graduated and left and the unsuitable probationers fell out more room was available, but still every room was filled and we realized that we had outgrown the Thayer. A temporary provision for the larger number of nurses this coming year has been made by taking part of the house at 6 McLean Street and fitting it up as a dormitory.

One new ward has been opened, the Orthopedic Ward, which requires a staff of one graduate nurse and four pupils. Since February a second pupil has been on duty with the Instructive District Nursing Association, and an extra pupil has been on night duty to assist in the Accident Ward, in the Operating Room, and relieving nurses to go to the dining-room for their midnight meal.

In the Out-Patient Department the Orthopedic Clinic has increased from three to six clinics a week. At the request of the Out-Patient surgeons a graduate was appointed for the Female Surgical room to instruct and supervise the two pupils detailed for duty during the clinic hours. Miss Mary E. Shields has filled this position with satisfaction to the surgeons. The definite instruction and constant supervision of the pupils has had excellent results. During the afternoon hours Miss Shields has had charge of the

Hydrotherapy for women patients and a senior pupil nurse has assisted, thereby gaining valuable experience in the water treatment of disease.

Since October Miss Mary E. McElligot, the head nurse in Ward B, has had charge of the pupils on special duty, and has instructed them in the details of private nursing for sick patients and in the keeping of bedside records. This is a most important advance in our training and one we have all felt the need of for many years.

The special nursing of patients done by the pupil nurses in 1907 amounted to 640 days.

The class of applicants has been better than in past years. The letters of inquiry received were 793, 50 more than last year. There were 31 applicants for a post-graduate course. Forty-three probationers were admitted and 12 of the number withdrew or were dropped for inefficiency. Fifteen graduates of the McLean Hospital were accepted for the 13 months' course. Diplomas were granted to 25 who completed the three years' course of training, and to 10 of the 12 McLean Hospital graduates admitted who completed the 13 months' course. The number of Children's Hospital pupils who came for the four months' course was 10. One graduate of the John Sealey Hospital, Galveston, Texas, was given four months general ward experience. We were asked to suggest graduates for 44 nursing positions.

There were eight instances of severe illness among the pupils followed by long leaves of absence to insure full recovery. The class of 1908 lost two promising members, to our deep regret, Mrs. Sally G. Adams, who died of pneumonia January 12, and Miss Florence Doolittle, who had malignant scarlet fever and died after three days' illness on March 28.

Two pupils have withdrawn from the school and eight were dismissed for cause. Two are absent on indefinite leave because of their health.

The medical instruction is, as in the past, given by Dr. Badger. The surgical instruction given heretofore by Dr. Manahan has been given by Dr. Arthur H. Crosbie this year. Miss Lydia D. Morse, who has for three years been the Diet Kitchen instructor, was this year succeeded by Miss E. Grace McCullough.

The plan of receiving the McLean Hospital pupil nurses for eight months' general training in this hospital was begun in May and five pupils are now on duty in the wards.

While the four medical ward towers were being remodeled last summer the patients of one ward were removed to the Relief Ward, and tents were put up in the yard near Charles Street to accommodate the patients of the adjoining ward. The change to tent life was enjoyed by the patients, and the nurses on duty there derived great benefit from their weeks of work in the fresh air and sunshine. The improved facilities for housework in these new towers are greatly appreciated by the head nurses. The appliances installed for sterilization of dishes and utensils save both time and labor and actually accomplish that cleanliness and safety which in the past we have only tried to attain by the use of antiseptics.

The continued interest of the ladies of the Advisory Committee has been keenly appreciated by the school, and their visits and entertainments have been thoroughly enjoyed.

The staff of the Training School is as follows:

Superintendent	1
Assistant Superintendents	2

Night Superintendent	1
Graduate Head Nurses	21
Post-graduate Pupils	3
Pupils, Class of 1908	24
Pupils, Class of 1909	27
Pupils, Class of 1910	23
McLean Hospital Graduates	15
McLean Hospital Pupils	5
Pupils in Preparatory Course	10
Total	132

Special Instruction:

Diet Kitchen	Miss E. Grace McCullough.
Massage	Miss S. May Taylor.

Respectfully submitted,

PAULINE L. DOLLIVER,
Superintendent of Training School.

MEDICAL INSTRUCTION.

Given by George S. C. Badger, M.D.

No changes have been made in the course as given last year. Owing to the larger classes presented for instruction, it has been impossible, with sections of fifteen nurses, to give to each one as frequent opportunities of examining patients as seems desirable. The method adopted is as follows: Two or three patients are given out for examination, two nurses to each patient. After a few minutes all the nurses gather about the bedside, and the two pupils tell what they have observed and what they think of the patient's condition. A quiz is held before the patient, if he is not too ill, and the treatment as actually being given is carefully considered. When the nature of the disease or the condition of the patient is such as to prevent the bedside quiz, the last fifteen minutes of the exercise are taken in the amphitheater. In other words, clinical medicine at the bedside is taught for one year, but without the use of auscultation, percussion, or any chemical examinations.

The outline of the two years' course is as follows:

First half of first year: Physiology, eleven lectures with demonstrations, quizzes, and examination. Hygiene, two lectures.

Second half of first year and first half of second year: Clinical Medicine, ward visits.

Last half of second year: Lectures on Therapeutics, The Exanthemata, Tuberculosis, Malaria, Meningitis, Syphilis.

The year of ward visits is by far the most interesting and profitable. In spite of the fact that the nurses are constantly with the patients, it is found that systematic instruction in the observation of patients and diseases, and the results of treatment is very much needed and appreciated. Much time is devoted to diseases of the circulatory, respiratory, and digestive organs, and to those of the kidneys, and to typhoid fever.

At the close of the second year an examination is given, covering the work of the last year and a half.

During the third year it is proposed to hold three conferences. At these exercises two or three nurses are to present brief papers, to be followed by a general discussion. These papers are to present subjects of general interest, and are to be the expression of the nurses' own experiences and observations in the medical and surgical wards, supplemented by any reading they may choose to do.

SURGICAL INSTRUCTION.

Given by Dr. Arthur H. Crosbie.

The course in surgical nursing covers two years. For the first year instruction is given in the following subjects :

Bandaging,
Biology,
Anatomy,
Surgical Anesthesia,
Surgical Bacteriology,
Surgical Pathology,
Sterilization.

The instruction is given by didactic lectures, followed by recitations.

The lectures on these subjects are necessarily very elementary. The courses are dealt with so as to bring before the nurse those points which have a practical bearing on surgical nursing.

BANDAGING.

The nurses are instructed in the manufacture, economy, and indications for bandages. The fundamental bandages are first taught, followed by detailed instruction upon the common bandages in use. By the use of artificial legs and patients taken from the ward, the nurses have an opportunity of applying the various bandages under the direction of the instructor.

The preparation of ordinary splints used in fracture work is demonstrated either by the instructor or one of the head nurses.

BIOLOGY.

Subjects embraced :

1. Vegetable life, } Relation to disease.
2. Animal life. }
3. Normal development of the human embryo.
4. Elementary histology.
5. Definition of common, general, anatomical terms.

ANATOMY.

Skeleton. The instruction on the anatomy of the skeleton dealt with the general structure of the skeleton, the names of the common bones, with special reference to fractures, those bony prominences commonly associated with bed-sores, and the anatomical landmarks, which are used for the measurement of splints and apparatus.

Joints, Muscles, and Tendons. The relation of the structure of these parts to the theory of massage.

Heart, Vascular System, and Theory of Circulation. Special emphasis was placed upon the surface markings of the large blood vessels, in order that the nurses should be familiar with the points where pressure might be exerted in the control of hemorrhage.

Lungs, Abdominal Viscera, and Pelvis. Description of the viscera in general, with special instruction upon their surface markings, followed by demonstration at autopsy.

By means of lantern slides, the manikin, and dissection at autopsy, instruction upon the exact relations of the male and female pelvis was given.

In this way an effort was made to make the nurse thoroughly acquainted in the most practical way with the directions of the urethra and rectum, with special reference to the use of the catheter and rectal tube.

ANESTHESIA.

This instruction this year has been given by Dr. Allen, the Anesthetist to the Hospital. Under his personal direction, the nurses receive much more practical instruction than by the former method.

SURGICAL BACTERIOLOGY.

General considerations covering

1. Relation of bacteria to organic life.
2. Relation to infectious diseases.
3. Conditions favoring bacterial growth.
4. Conditions and agents used in inhibiting and preventing bacterial growth.
5. Means of identification, and methods of cultivation used in bacteriology.

Surgical Bacteria. Microscopical demonstration of the common surgical bacteria. Relation of these bacteria to surgical fevers and traumatic wounds. Relation of these bacteria to aseptic and to antiseptic surgery. Sources of infection and manner of entering the body. Methods employed to overcome their invasion.

SURGICAL PATHOLOGY.

Elementary histology of skin, connective tissue, muscles, bones, nerve, and mucous membrane.

Inflammation. Causes, symptoms, and results and treatment. Difference in the process dependent upon the special tissues.

Granulation Tissue. Its relation to repair, and importance in the healing of wounds.

Elementary consideration of tumors.
Definition of tumors in general.
    Benign — different varieties.
    Malignant — { Carcinoma. / Sarcoma. }

SURGICAL FEVERS.

Aseptic and septic fever. Urethral fever. Septicemia. Pyemia. Tetanus. Anthrax. Gangrene. Erysipelas.

STERILIZATION.

History of asepsis and antisepsis, and their evolution.

Methods used in hospital practice.

Methods used in private practice, embracing the use of dry heat, moist heat, and chemicals.

Special emphasis was placed upon the means of obtaining the proper conditions for carrying out aseptic surgery in private practice.

Duties of a nurse at a surgical operation in
    Hospital practice
    Private practice — preparation of room, materials, and utensils commonly found in the ordinary home, and their adaptation for use in a surgical operation.

The course of instruction in the second year covers most of the surgical diseases of the body from the standpoint of surgical nursing. These surgical diseases are taken up by regions. As an example, one or more clinical lectures on the surgical diseases of the head are given. At the next exercise a series of lantern slides, showing the common surgical lesions of the head, is presented. The instruction on this region is then completed at a clinical exercise, at which a nurse is assigned to a case. The nurse is allowed to study the case and then, with the help of the instructor, the clinical side of the case and the problems of nursing connected with the case are discussed before the class.

In this way, all the other regions of the body are systematically covered.

NURSING INSTRUCTION.

Ethics: Relation of pupil
- to Hospital.
- to Training School.
- to Patients.

Care of Hospital Property.
Care of Patients' Property.
Hygiene: Personal.
Ward. Ventilation, temperature, and sunlight. Cleanliness, order, economy, care of utensils, disposal of waste, soiled linen, etc.
Beds and bedmaking:
Bedsteads, springs, mattresses, pillows, linen, blankets.
Observation and care of new patients.
Care of bed patients:
Bathing and care of skin, mouth, teeth, throat, and nose, head, hands, and feet.
Food, medicines.
Observing, reporting, and recording symptoms.
Convalescence.
Enemata: Uses. Methods.
Douches — Catheterization.
External applications:
Fomentations, poultices, heat and cold, counter irritants.
Temperature.
Pulse.

Respiration.
The Urine.
Instruments and Utensils.
    Uses, care, repair.
Pantry and ward supplies.

NURSING IN MEDICAL CASES.

Typhoid fever, diseases of the lungs, heart, kidneys.
Rheumatism.
Contagious diseases.

NURSING IN SURGICAL CASES.

Uses of disinfectants.
Sterilization.
Care of fractures, etc.
Emergency cases.
Assisting at operations.
Gynæcological nursing.
Obstetrical nursing.
Nursing in nervous cases.
Sick children and infants.
Care of the dead.
Private nursing.

THIRD-YEAR LECTURES.

ETHICS.

DR. RICHARD C. CABOT	1 hour

NURSING IN GENITO-URINARY CASES.

DR. FRANKLIN G. BALCH	1 hour

NURSING OF SICK CHILDREN.

DR. CHARLES W. TOWNSEND	2 hours

NURSING IN NERVOUS CASES AND CONVALESCENCE.

DR. HENRY C. BALDWIN	2 hours

TREATMENT OF NEURASTHENIC AND HYSTERICAL PATIENTS.

DR. JAMES J. PUTNAM	2 hours

NURSING IN DISEASES OF THE SKIN.

Dr. John T. Bowen	1 hour

NURSING IN DISEASES OF THE EYE.

Dr. Frederick E. Cheney	1 hour

NURSING IN DISEASES OF THE EAR.

Dr. Henry L. Morse	1 hour

NURSING IN DISEASES OF THE NOSE.

Dr. Algernon Coolidge, Jr. Given by Dr. J. Payson Clark	1 hour

NURSING IN DISEASES OF THE THROAT.

Dr. Algernon Coolidge, Jr. Given by Dr. J. Payson Clark	1 hour

NURSING IN ABDOMINAL SURGERY.

Dr. Maurice H. Richardson	1 hour

[*The circular of information which is sent to applicants.*]

THE MASSACHUSETTS GENERAL HOSPITAL TRAINING SCHOOL.

The Massachusetts General Hospital Training School for Nurses in Boston has made arrangements for giving a three years' course of training to women who desire to learn the art of nursing the sick.

Letters of application to the Superintendent of the Training School should contain a brief personal history, and should be accompanied by a statement from a physician testifying to sound health and unimpaired faculties. Applicants must be between twenty-one and thirty-five years of age, and of at least average height and weight.

A high-school education or its equivalent is required, and applicants should be prepared to show school diplomas or certificates as an aid in determining the amount of education they have received.

The Superintendent of the Training School and the Resident Physician of the Hospital decide as to the acceptability of candidates. The class is formed during the spring and summer months, but application should be made at least six months in advance. If approved, applicants are received for a period of two months' probation, and during this time they should be prepared for an examination in reading, English dictation, and simple arithmetic. The Superintendent of the Training School will decide as to their fitness for the work, and the propriety of retaining or dismissing them.

Those who prove satisfactory are accepted, and become pupils of the School on signing an agreement to remain thirty-four months, after the period of probation, and to obey faithfully the rules of the Hospital and of the School.

During the first twelve months the record of the pupil is carefully considered, and if found unsatisfactory or unpromising, the Superintendent of the Training School can drop the pupil from the School. She may, at any subsequent time, suspend, and with the approval of the Resident Physician and the Training School Committee, dismiss a pupil for misconduct, inefficiency, or neglect of duty.

Except under special circumstances, failure to pass the examinations will be sufficient cause for terminating a pupil's connection with the School.

Pupils reside in the Home, and act as assistants in the various departments of the Hospital. They are expected to perform any duty assigned them by the Superintendent of the Training School.

The hours of duty are from 7 A.M. to 7 P.M.

A vacation of three weeks is given each year.

In sickness, the pupils are cared for gratuitously, but all time so lost must be made up.

As the School is unsectarian, there are no religious services connected with it; but all pupils are expected to attend the places of worship they prefer once on Sunday.

An allowance of $6.00 per month, exclusive of the months of probation, is made to defray the necessary expenses of uniforms and text-books.

Pupils receive board, lodging, and a limited amount of laundry work.

Pupils should come prepared to pay at the close of the period of probation for their uniforms and text-books, the cost of which will not exceed $20.

A regular course of lectures, recitations, and demonstrations is given, with examinations at stated periods. Instruction is also given at the bedside of patients by the visiting and resident physicians and surgeons.

The course includes three months' special training in obstetrics, three months in private nursing at the Corey Hill Hospital, Brookline, and one month district nursing with the Instructive District Nursing Association.

For those who desire it a preparatory course of four months is offered at Simmons College devoted to the study of the following subjects:

Household Arts,
Chemistry,
Bacteriology,
Anatomy,
Physiology.

(Each student who takes this course will be required to pay in advance a tuition fee of $50.00, and to deposit $10.00 for breakage.)

When the full term of training is completed, after passing the examinations, the nurse receives the diploma of the School, and is at liberty to choose her own field of labor, either in hospital or district work, or in private families. As it is believed that an annual report of the addresses and positions of the graduates of the School will be for the advantage of the nurses as well as the School, the graduates are requested to send their addresses to the Superintendent of the Training School on or before December first of each year.

A graduate of this School who wishes to gain special proficiency in the care of nervous and mental cases has the privilege, under certain restrictions, of entering the McLean Hospital Training School for Nurses. Such graduates will, after one year's satisfactory study, receive the diploma from that School in addition to the one received from the Massachusetts General Hospital Training School for Nurses.

Personal application may be made to the Superintendent of the Training School, Wednesday mornings, between 10 and 12 o'clock.

Postgraduate Course.

A two months' Postgraduate Course is open to the graduates of this Training School. The course consists of two months' surgical work, or of two months' medical work, or of one month each of medical and surgical work, as the graduate prefers.

Students must provide themselves with the uniform of the School. They live outside the Hospital, pay no fee, and receive no pay for this course. Their hours of duty conform to those of the pupils or the School, and they act as assistants in the wards.

Those who wish to take this course should apply to the Superintendent of the Training School; and state definitely what experience they wish to have, and the time when they could most conveniently take the course.

During the summer months there would be more openings for graduates, but, so far as possible, appointments will be made to suit the convenience of the applicants.

REPORT OF THE PATHOLOGICAL LABORATORY.

The usual routine bacteriological, chemical, and microscopical examinations in connection with the study of the diseases of patients in the Hospital have been carried on during 1907.

Dr. Oscar Richardson has continued to do most of the important work of performing the autopsies and of keeping the autopsy records. He has also carried on the routine bacteriological examinations required by the Hospital.

The facilities and material afforded by the laboratory for the instruction of physicians and of the students of the Harvard Medical School in bacteriology, pathological anatomy, pathological histology, and in diagnosis by laboratory methods have been extensively utilized.

The weekly demonstrations of post-mortem material and discussions of the clinical aspects of the cases conducted in the autopsy amphitheater before fourth-year medical students and others have been continued during the year by Drs. R. C. Cabot, Oscar Richardson, and J. H. Wright.

In addition to the instruction in pathology given to second-year medical students as in previous years by Dr. Wright, this year special instruction in the laboratory has been given by him to fourth-year medical students. Dr. Oscar Richardson has continued to give special instruction in pathology to graduate students.

A special room in the laboratory has been assigned for the laboratory work of certain students of the Harvard Medical School who are studying in the wards of the hospital. Special opportunities have been given to students and physicians to gain knowledge from the autopsies which are of the greatest educational value to them. Laboratory facilities have also been provided for the medical students in the course conducted by Dr. F. T. Lord.

An important innovation in the work of the laboratory has been the treatment of certain bacterial diseases by subcutaneous injections of killed cultures of the infecting bacteria according to the methods of Sir Almroth E. Wright of London. Through the active interest of Dr. A. T. Cabot and others in having this new mode of treatment instituted and tested in this community, a course of instruction was given in the laboratory by Dr. Ross during the month of January to a number of physicians. Since that time some hundreds of patients have received courses of the treatment in the wards and in the laboratory in which two rooms have been set apart for their accommodation. The treatment of most of these cases has been carried on by Dr. H. F. Hartwell and Dr. Roger I. Lee; Dr. Roger Kinnicut also did much work in this connection.

Facilities for special studies in various branches of pathology and bacteriology have been afforded as usual to a number of special workers. Of studies carried on in the laboratory during the year the following may be mentioned:

Dr. Mark W. Richardson has continued his studies upon the specific treatment of typhoid fever.

Dr. F. T. Lord has begun an investigation to determine, if possible, the nature of the infecting agent in influenza.

Dr. J. H. Wright has devoted much attention to the following subjects : the comparative morphology of blood corpuscles and of the blood forming cells in various animals ; the structure of thrombi ; the histogenesis of the blood platelets and certain subjects connected therewith.

A number of publications, based in whole or in part upon observations made in the laboratory, appeared during the year and are as follows :

"Influenza," by Dr. F. T. Lord. (Osler's Modern Medicine, Vol. II., chap. XVII.)

"Diseases of the Pleura," by Dr. F. T. Lord. (Osler's Modern Medicine, Vol. III., chap. XX.)

"Malignant Disease of the Pleura with Exhibition of Specimen," by Dr. H. F. Vickery and Dr. Oscar Richardson. (Boston Medical and Surgical Journal, Vol. CLVII., p. 824.)

"Treatment of Simple Infections of the Staphylococcus Aureus with the 'Vaccines of Wright,'" by Dr. H. F. Hartwell and Dr. Roger I. Lee. (Boston Medical and Surgical Journal, Vol. CLVII., p. 523.)

"Treatment of Typhoid Fever with Specific Sera, Filtrates and Residues (Vaughan)," by Dr. Mark W. Richardson. (Boston Medical and Surgical Journal, Vol. CLVII., p. 449.)

"Psuedo-Tuberculosis of the Peritoneum and Report of a Case," by Dr. Farrar Cobb. (Boston Medical and Surgical Journal, Vol. CLVII., p. 861.)

"Papillary-Cystadenomata of the Breast," by Drs. Robert B. Greenough and Channing C. Simmons. (Annals of Surgery, Vol. XLV., p. 188.)

"Osteogenesis Imperfecta and Idiopathic Fragilitas Ossium," by Dr. Channing C. Simmons. (Annals of Surgery, Vol. XLVI., p. 179.)

"Multiple Myelmona," by Dr. Henry A. Christian. (The Journal of Experimental Medicine, Vol. IX., No. 4.)

"Diffuse Carcinoma of the Stomach, Œsophagus and Duodenum," by Dr. Henry A. Christian. (The Journal of American Medical Association, Vol. XLIX., p. 650.)

"A Critical Estimate of the Fermentation Specific Gravity Method of Quantitating Sugar in Diabetic Urine," by Dr. Henry A. Christian. (The Boston Medical and Surgical Journal, Vol. CLVII., p. 178.)

"The Cause of a Positive Agglutination Reaction in Icterus," by Dr. Henry A. Christian. (The Boston Medical and Surgical Journal, Vol. CLVI., p. 536.)

"Diseases due to Vegetable Parasites other than Bacteria," by Dr. J. H. Wright. (Osler's Modern Medicine, Part V., Vol. I., chaps. XV. and XVI.)

Concerning the work of the chemical laboratory, Dr. W. F. Boos reports as follows:

"In the chemical laboratory chemical examinations of physiological and pathological specimens from patients have been carried out in a large number of cases. They include lead and arsenic determinations, analysis of urinary calculi, examinations of organs for the presence of exudates, transudates, etc.

"Dr. Boos has continued his researches. Nucleic acid from pus has been obtained in the pure form. The sugar contained in yeast nucleic acid has been isolated and analyzed. A new derivative of yeast nucleic acid has been found. From the blood of eclamptic patients an active crystalline tozin has been isolated. From sterile chest fluids a nucleo-proteid has been obtained in form of copper salt. Studies have been made on the extent of septic absorption from the intestines in a case of Still's Disease.

"Dr. Wilder Tileston is engaged on a study of fat absorption in a case of cancer of the pancreas.

"Dr. J. H. Pratt and Mr. Morrison have begun a series of metabolism experiments on a case of pancreatic disease.

"In conjunction with the medical house officers, Dr. Boos has applied certain recent advances in pharmacology to the treatment of hospital cases. On Dec. 20, 1907, Dr. Boos presented a paper on ' Ptomains and Toxins,' before the northeastern section of the American Chemical Association."

The death of Miss Ella G. Flynn, stenographer in the laboratory since 1900, is recorded with much regret.

Respectfully submitted,

James Homer Wright, M.D., S.D.,
Director.

ANNUAL REPORT

OF THE

TREADWELL LIBRARY.

1907.

The Library has been especially fortunate in the matter of gifts this year, 132 volumes having been received, and two sums of money; one of the latter coming from Dr. A. T. Cabot, and the other from Dr. F. B. Harrington. Through the Medical Library Association Exchange, 69 bound volumes have come, and 16 periodicals are regularly sent. Other gifts of books have been received from Dr. R. H. Fitz, Dr. F. C. Shattuck, Dr. A. T. Cabot, Dr. C. L. Scudder, Dr. J. H. Wright, Dr. F. A. Washburn, Jr., Dr. W. S. Bigelow, Dr. Henry Jackson, Dr. Royal Whitman and Dr. A. B. Judson of New York, Harvard Medical School, Library of the University, Manchester, England, the State and Municipal Governments and the United States Government. The thanks of the Library are hereby expressed to the various associations and societies who have so kindly continued to send copies of their transactions.

The gift received from Dr. Henry Jackson consisted of 14 books and 27 pamphlets from the library of the late Dr. J. B. S. Jackson. These are of early date, and several are of particular value to this Library. The gift from Dr. W. S. Bigelow included 4 bound volumes and 30 pamphlets.

The greatest need of the Library is more room. Bound volumes of periodicals fill the shelves rapidly, and it is this class of literature for which there is most frequent request. During the past year, a large number of the older books have been moved to a room downstairs in order to accommodate the increasing number of accessions, but shelves are already nearly filled again, and more room will be needed within a few months. The same is true of the Record Room which is filled nearly to its limit. Seventy-six volumes have been bound during 1907, and this number will probably be exceeded during the coming year.

Following are the statistics, including the work done upon Hospital Records:

BOOKS.

No. of vols. on hand Jan. 1, 1907		6,646
Purchased	25	
Gifts	132	
Periodicals bound	89	
Total no. of bound vols. added . . .		246

GRACE W. MYERS,

Assistant Librarian and
Keeper of Records.

DALTON SCHOLARSHIP.

The income of this fund, amounting to $500 annually, is devoted to investigation in the science of medicine. The rules of the Trustees applicable to it are as follows:

Article 1. Candidates shall be nominated to the Board of Trustees by a Committee consisting of the General Hospital Staff and the Director of the Pathological Laboratory, with recommendations for the information of the Board. They shall be either Internes of the General Hospital or male graduates of a regular American Medical College.

Article 2. The nature of the work in medical investigation proposed to be prosecuted by each candidate shall be designated.

Article 3. Scholars shall be appointed by the Board from among the candidates named.

Article 4. Scholars shall be under the supervision of the Staff and the Staff shall, whenever it thinks desirable, report to the Board any dissatisfaction it may feel as to the work or methods of scholars, and the Board may act in the premises as in the case of Internes.

Article 5. Scholars are required to do an amount of work equivalent to not less than ten hours per week from the last Wednesday in September to the last Wednesday in June, and to present to the Trustees, at the end of the year, a report on the amount and result of the work performed. The results of work of scholars shall appertain to the Hospital, and when made public, the name of the scholar shall accompany the publications; but no publication shall be made unless recommended by the Staff and approved by the Board.

Article 6. Should the work of a scholar extend through a part of the year only, he shall be entitled to a proportionate share of income.

Article 7. When the income is insufficient, appointments for the year may be omitted.

Article 8. Any income not used shall be cumulative and not added to the principal.

Article 9. Scholars shall be eligible for renomination and reappointment.

Article 10. Candidates for scholarship should make written application to the Resident Physician of the Massachusetts General Hospital on or before May 15, and the scholarship shall be held for one year from September 15 following.

Further information may be had by applying to the Resident Physician of the Massachusetts General Hospital.

WARREN TRIENNIAL PRIZE.

MASSACHUSETTS GENERAL HOSPITAL.

The Warren Triennial Prize was founded by the late Dr. J. Mason Warren in memory of his father, and his will provides that the accumulated interest of the fund shall be awarded every three years to the best dissertation, considered worthy of a premium on some subject in Physiology, Surgery, or Pathological Anatomy; the arbitrators being the Physicians and Surgeons of the Massachusetts General Hospital.

The subject for competition for the year 1910 is on Some Special Subject in Physiology, Surgery, or Pathology.

Dissertations must be legibly written, and must be suitably bound, so as to be easily handled. The name of the writer must be enclosed in a sealed envelope, on which must be written a motto corresponding with one on the accompanying dissertation. Work which has already been published will not be received in competition.

Any clue given by the dissertation, or any action on the part of the writer which reveals his name before the award of the prize, will disqualify him from receiving the same.

Essays must be typewritten in English, French, or German.

The amount of the prize for the year 1910 will be $500.

In case no dissertation is considered sufficiently meritorious, no award will be made.

A high value will be placed on original work.

HERBERT B. HOWARD,

Resident Physician.

RULES FOR ADMISSION, ETC.

Application for admission of patients should be made at the Hospital on Blossom Street, Boston, on week days between the hours of 9 and 11 A.M. and 2 and 3 P.M.

Recent accidents admitted at all hours.

Out-patients received on Fruit Street, between the hours of 8.30 and 10 A.M., week days only. Out-patient service is for the poor only.

Applications from a distance should be made in writing, accompanied by a full description of the case by the attending physician, with reason of the physician for thinking hospital treatment desirable, and when a free bed is needed, by a statement of the pecuniary condition of the patient. Always wait for a reply before sending the patient.

Contagious and chronic diseases are not admitted.

Regular charges to paying patients are as follows: in the Jackson Ward (private), $35 per week; in small room in the Townsend and Bigelow Wards, $21 per week; in the General Wards, $10.50 per week. These rates, covering only expenses of board and lodging, may be increased or abated in individual cases by the Resident Physician.

An ambulance, accompanied by a medical officer will be despatched to any point within the city proper for the conveyance of cases of accident or urgent sudden sickness, not contagious, to this Hospital, or elsewhere, upon notice from a physician, the police, or other responsible source, subject to the approval of the Resident Physician.

In cases requiring gratuitous treatment no charge will be made.

MEDICAL AND SURGICAL STATISTICS.

FROM JAN. 1, 1907, TO DEC. 31, 1907, INCLUSIVE.

TABLES OF DISEASES COMPILED FROM MEDICAL RECORDS.	ADMITTED.				DISCHARGED.						
	In Hospital, Jan. 1, 1907.	Males.	Females.	Total.	Well.	Relieved.	Not Relieved.	Not Treated.	Died.	In Hospital, Jan. 1, 1908.	Total.
GENERAL DISEASES.											
DISEASES OF THE BLOOD.											
Anemia	...	3	6	9	....	6	2	....	....	1	9
Chlorosis	1	....	5	6	1	5	....	....	....	....	6
Pernicious anemia	....	10	11	21	....	7	3	....	9	2	21
Leukemia	1	5	1	7	....	4	2	....	1	....	7
Pseudoleukemia	....	1	2	3	....	1	2	....	....	....	3
Purpura	....	....	1	1	1	....	....	....	....	....	1
Purpura rheumatica	....	2	....	2	2	....	....	....	....	....	2
DISEASES OF THE DUCTLESS GLANDS.											
Of the Thyroid Gland.											
Goitre	....	....	2	2	....	1	....	1	....	....	2
Exophthalmic goitre	....	....	9	9	....	6	....	....	1	2	9
Myxedema	....	1	1	2	....	2	....	....	...	....	2
Of the Adrenal Glands.											
Addison's disease	....	...	1	1	....	1	....	....	....	....	1
DISEASES OF THE LYMPHATIC APPARATUS.											
Cervical adenitis	....	1	....	1	....	....	....	1	....	....	1
Tuberculosis of mediastinal glands	....	1	....	1	....	1	....	....	....	....	1
LOCOMOTOR AND CONSTITUTIONAL DISEASES.											
Myasthenia gravis	....	1	1	2	....	....	1	....	1	....	2
Muscular rheumatism	....	1	1	2	1	1	....	....	....	....	2
Arthralgia	....	1	....	1	1	....	....	....	....	....	1
Arthritis:											
infectious	2	12	9	23	8	12	3	....	....	....	23
Carried forward	4	39	50	93	14	47	13	2	12	5	93

MEDICAL DISEASES, 1907 — *Continued.*

MASSACHUSETTS GENERAL HOSPITAL.

OUT-PATIENT REPORT

For the Year ending December 31, 1907.

NUMBER OF NEW PATIENTS, 20,358.

Men, 9,631 Women, 6,598 Children (under 14), 4,129
American, 9,697 Foreign, 10,661
Residents of Boston, 9,937 Residents of other places, 10,421
Total attendance, 107,063

MALE SURGICAL.

No. of new patients, 4,265 No. of old patients, 22,320

FEMALE SURGICAL.

No. of new patients, 2,553 No. of old patients, 13,455

MALE MEDICAL.

No. of new patients, 2,631 No. of old patients, 4,719

FEMALE MEDICAL.

No. of new patients, 3,831 No. of old patients, 7,046

SKIN.

No. of new patients, 2,355 No. of old patients, 8,751

NERVE.

No. of new patients, 828 No. of old patients, 5,572

THROAT.

No. of new patients, 2,608 No. of old patients, 8,776

ORTHOPEDIC.

No. of new patients, 1,287 No. of old patients, 5,556

ZANDER.

No. of new patients, . . No. of old patients, 5,391

HYDROTHERAPEUTIC.

No. of new patients, . . No. of old patients, 3,379

SUBURBAN TUBERCULOSIS CLASS.

No. of new patients, . . No. of old patients, 1,735

Mc. LEAN HOSPITAL GROUNDS

ANNUAL REPORT (NINETIETH)

OF THE

SUPERINTENDENT OF THE McLEAN HOSPITAL.

To the Trustees of the Massachusetts General Hospital:

The following report of the McLean Hospital for the year 1907 is respectfully submitted.

The whole number of patients under treatment during the calendar year was 373, which is 47 more than in 1906. The daily average number was 199.88, an increase of fifteen over that of the previous year. This increase in the number of patients is due to the occupation of the Codman House, which for the last three months of the year has been continuously full. Advantage was taken of this additional accommodation for women to make alteration and repairs in the first floor of the Women's Belknap House. An alcove was thrown into the serving room, which thus was more than doubled in size; a room for linen was provided; and all the rooms and corridors were painted. Because of these repairs twelve beds were not available for use during the last three months of the year.

The recoveries were 19.8 per cent of the admissions and 23.6 per cent of the dismissals.

Of the 192 admissions 53 per cent were voluntary patients, only one of whom was afterward formally committed; and there remained in the Hospital December 31 on the voluntary basis 71 persons, 37 men and 34 women.

The statistical tables presented herewith are for the year ending September 30, in order that they may be uniform in time with those of the Massachusetts state hospitals for the insane.

Expenditure on account of the gipsy moth has been disappointingly large, due chiefly to the purchase of an apparatus for spraying the trees. It is more than that for last year instead of being less as was anticipated. Other expenses also, especially for stores, heat, light and power and pay roll show a considerable increase over those of last year, but with the increased number of patients there has been a sufficient increase of income so that, with the help of the small return from invested funds, the year again closes without a deficit, if a very moderate allowance be made for stores on hand.

More than ordinary routine repairs have been made and still more will be necessary in the coming year. The various houses of the Hospital were finished, furnished, and occupied at about the same time, between twelve and thirteen years ago, and the decorations and furnishings have needed renewal at about the same time. This has been the cause of considerable expense during the past four years. The rooms of many of the houses need painting; rugs and other furnishings must be provided to maintain a proper standard of accommodation. Especially is there such need in the houses for excited patients. It is a comparatively easy matter to furnish nicely and keep in order the houses occupied by quiet and convalescent patients, but it is a better test of a good hospital that the wards for the excited patients be maintained at a high standard of comfort and attractiveness.

Repairs which will entail considerable expense should be made in the summer on the exterior of some of the houses. The stone coping on the gable ends should be removed and relaid with lead or copper sheathing beneath.

The cold storage plant of the Hospital, which never was entirely satisfactory, is now worn out and must be replaced. The new system should include a cold room for men and another for women for the storage of furs and winter clothing to protect them from moths. Clothing which is carefully put away in the spring is often found in the fall to have been practically ruined. Such losses are expensive and are open to just criticism. Cold storage rooms for the protection of the patients' clothing would add very materially to a satisfactory administration.

Work in the chemical laboratory has been continued by Dr. Folin. He was appointed Associate Professor of Chemistry in the Harvard Medical School October 1, but by an arrangement with the school a portion of his time is still given to the Hospital.

"During the year the metabolism in general paralysis and the metabolism in fasting have been studied. Preliminary reports on the results obtained have been presented before some scientific societies but have not yet been published. A considerable part of Dr. Folin's time has been given to the writing of a general review of recent work in biological chemistry for the Journal of the American Chemical Society. This paper is not yet quite ready for the printer. During the latter part of the year the attempt to separate methyl amine and ammonia was again taken up together with Mr. Erdmann, but as yet no adequate method has been found."

In the Psychological laboratory the work begun by Dr. Franz has been continued by Dr. F. Lyman Wells, Ph.D., Columbia 1906, lecturer in Psychology, Barnard College 1907, who has been appointed Assistant in Pathological Psychology. "The research work has dealt mostly with problems in the maximum rate of repeated voluntary movements in normal life and in the psychoses, a study suggested on the pathological side by investigations of tremor by Peterson, Herringham, and Sommer, and on the normal side mainly by the work of Desslar, Began, Gilbert, and Bliss. While little of strictly clinical significance has as yet been found in the original object of the investigation, the method has proved exceedingly suggestive in the development of a hitherto practically unrecognized means for the study of fatigue.

"The clinical suggestions of the recent work of Peterson and Jung, on the electric resistance of the body as correlated to various mental states, has led to the installation of apparatus for further investigations of this problem with certain elaborations of the technique. This research is as yet only in its preliminary stages. The problem is attracting a good deal of attention in the normal field, and much light on it from various sources may be expected during the year.

"Another department of the work has been directed toward the development of more standard methods of measurement for ordinary clinical use."

In order to obtain more space for research work a large room on the second floor of the men's gymnasium has been taken and is being fitted up for this

CODMAN HOUSE, McLEAN HOSPITAL

purpose. It should provide for the growing needs of the laboratory for a considerable period.

Among the more important pieces of apparatus added to the laboratory during the year are the following:

Jacquet chronograph.
Sound-hammer (Zimmerman's latest improved model).
Universal standard
Cattell gravity chronometer and tachistoscope.
Adjustable pendulum.
Leeds & Northrup D'Arsonval Galvanometer, type H.

In addition to the three papers of Dr. Franz, mentioned in the last Annual Report as being in the hands of editors, the following have been published during the year by:

Dr. Folin, "The Occurrence and Formation of Alkyl Ureas and Alkyl Amines."
"The Separate Determination of Acetone and Diacetic Acid in Urine."
"The Reduction of Barium Sulphate in Ordinary Gravimetric Determinations." (The Journal of Biological Chemistry.)
"The Acid Intoxication Theory." (The Journal of the American Medical Association.)

Dr. Wells, "Standard Tests of Arithmetical Associations." (Journal of Philosophy, Psychology, and Scientific Methods.)

"A Statistical Study of Literary Merit." (Archives of Psychology.)

The work on which the two papers are based was done in the laboratory at Columbia College.

Reviews:

Scripture, " Researches in Experimental Phonetics." (Science.)

Dreyfus, "Die Melancholie." (Journal of Philosophy, Psychology, and Scientific Methods.)

Dr. Packard, " Prognosis in Cases of Mental Disease Showing the Feeling of Unreality." (American Journal of Insanity.)

The following papers are in the hands of editors for publication or are nearly completed.

Dr. Folin, " Protein Metabolism in Typhoid Fever."

" Protein Metabolism in Fasting."

" Recent Advances in Biological Chemistry." (By request.)

"Chemical Problems in Hospital Practice." (By request.)

Dr. Wells, " On the Variability of Individual Judgment."

Following a custom established many years ago Dr. Packard was given leave of absence of six months to pursue medical studies in the Psychological Clinic and laboratory of Kraepelin and Altzheimer in Munich. He sailed October 5. The advantage to him, to other members of the staff, and to the medical work of the Hospital can scarcely be overestimated. The clinical men make routine visits and spend time with all the patients in the course of their daily work and are burdened with many executive details which take time and strength and are distracting. They, therefore, cannot pursue the long and careful study which some cases demand, and which always is necessary for the advancement of a knowledge of psychiatry. It is now generally recognized that for such work there is need of a man fitted by inclination and education, who will be at liberty to concentrate his attention on any given case as long as may be necessary, instead of being obliged to visit all the patients at regular intervals and talk with their friends. All the information he obtains is at the service of the medical staff. Such work is also a distinct benefit to the patients whose cases are so carefully studied.

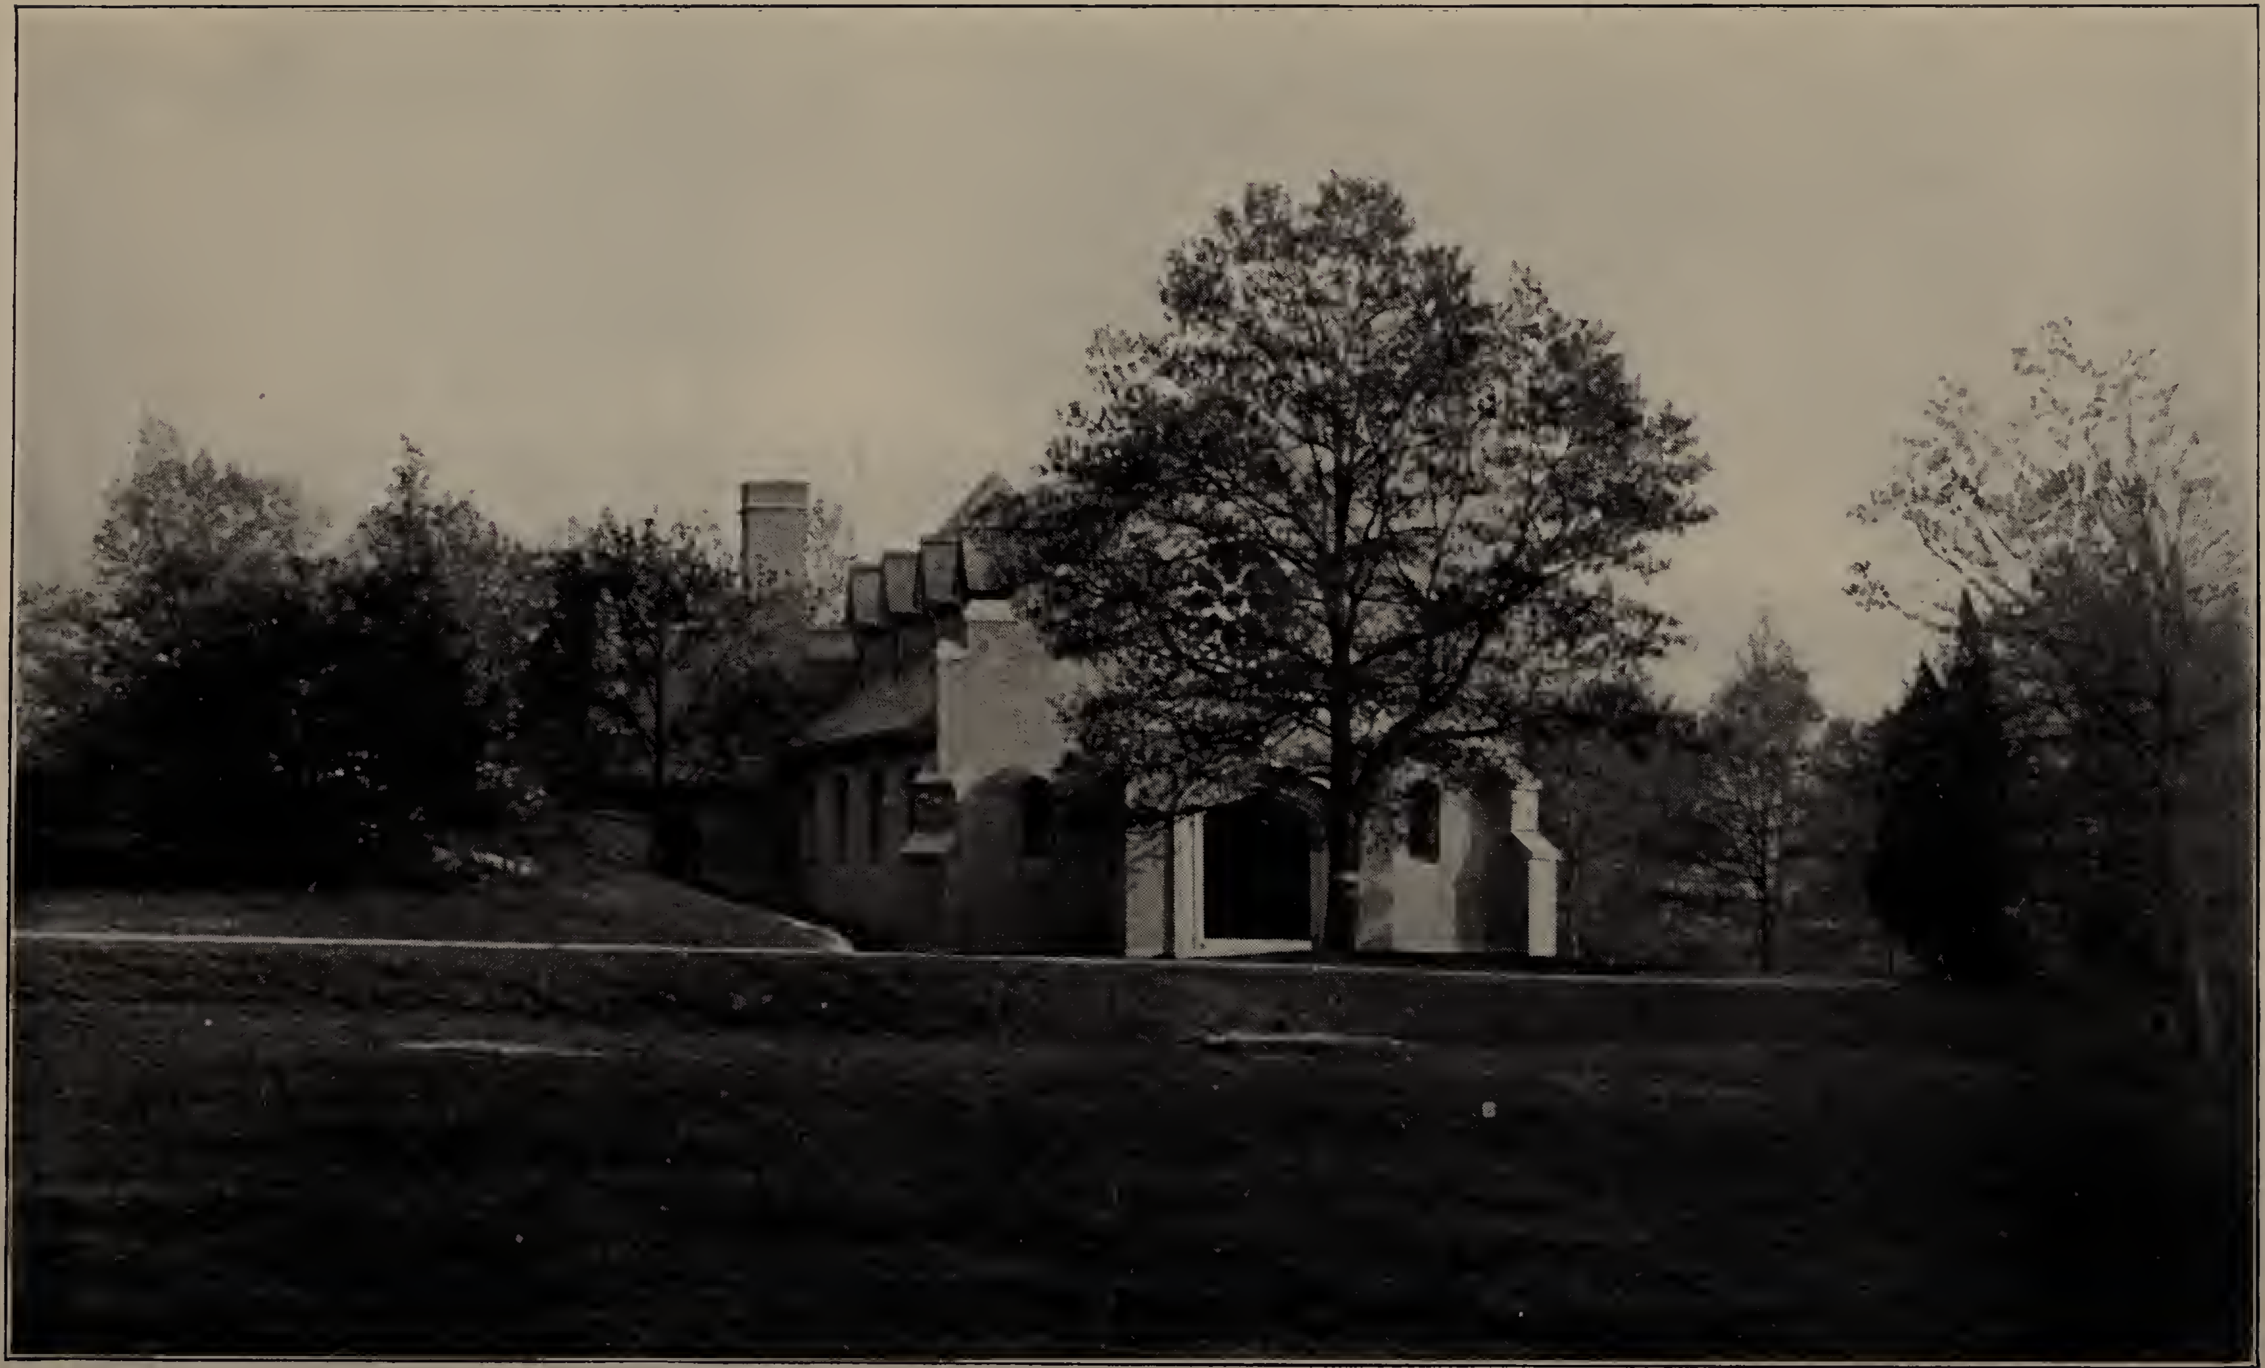
From recent rumors of as yet unpublished research it would appear that pathological anatomy may again take a prominent place in the study of mental diseases. For over four years no special work in this field has been done in our laboratories. It has been found to be a disadvantage because of the necessarily incomplete study of certain cases, of which the clinical side has been well observed. It is recommended that a junior assistant, who wishes to make a special study of neuro-pathology, be engaged for work in the anatomical laboratory.

During the year, $956.30 was expended for the general and medical libraries. Of this sum, $265.51 was for the former, to which were added 278 books. This collection for the use of the patients now numbers 5,528 volumes. The balance, $690.79, was for the medical library, and of this sum $573.58 was for periodicals. This library is exceedingly valuable for reference, and numbers 4,292 volumes — an increase of 198 for the year.

The art rooms have been maintained by friends of the Hospital, who have loaned during the year 91 oils, 53 water colors, 25 photographs, and 4 bronzes. Instruction in drawing and painting has been given as usual on two afternoons of each week to classes of the women patients by Miss Anna B. Chapman. An attempt is being made to provide better pictures for the sitting rooms and other rooms used in common by the patients of the various houses by purchasing from time to time photographs and other reproductions of the work of the best artists. Frames for these are made by men patients in the workshop, and are stained by the painter. In this way superior pictures are gradually being acquired at a trifling expense. About fifty were added during the year.

In the last annual report it was recommended that several cottages be built for the occupancy of married physicians and nurses. During the year a small house with about half an acre of land has been purchased. It is half a mile from the Administration House, and cannot well be used for a physician who has executive duty and should be near his work. It can, however, be used for another officer after some necessary repairs have been made. It is still desirable that other cottages be built on the Hospital estate for a married physician and nurses.

Another plea is here made for a house for the women nurses, who still are very inadequately lodged in the attic rooms on the third floors of the patients' houses. These rooms, except those in the Codman House, are of such shape and in such repair that they do not tend to comfort and contentment and, what is a still greater objection, they are over the heads of patients who, if sensitive, are liable to be disturbed even by the ordinary and perfectly proper movements



SAMUEL ELIOT MEMORIAL CHAPEL, McLEAN HOSPITAL of the nurse. A still greater objection to the rooms for nurses being in the same houses with their patients is the fact that they cannot escape from the atmosphere of their work, which always is difficult and is a severe strain on the nervous strength of the conscientious nurse. Her hours of work are long, and she should have absolute and restful freedom when off duty.

The following changes in the Hospital Staff have taken place during the year: Dr. Frederic B. M. Cady was appointed Junior Assistant Physician, April 13. Dr. Gilbert V. Hamilton, Junior Assistant Physician, resigned October 5 to engage in private work. Dr. F. Lyman Wells was appointed Assistant in Pathological Psychology, July 1. Mr. Christian Östergren, assistant in the Chemical Laboratory, resigned October 21. He was succeeded, November 4, by Mr. Charles C. Erdmann, who received his education at Bonn, Munich, and Heidelberg. Miss Cecilia K. Bradt, Instructor in Cookery in the Training School for Nurses, and who had other important duties in the culinary department, resigned August 20 to accept the position of Instructor in Household Arts in the Carnegie Technical School, Pittsburg, Pa. She had rendered the Hospital most valuable service for eleven years. Her successor is Miss Grace M. Swanson.

The immediate needs of the Hospital are:

A house for the women nurses.

Cottages for a physician and for married men nurses.

An increase to $10,000 of the fund for the art rooms.

An increase to $200,000 of the fund for research work in the laboratories.

In conclusion, I wish to express my grateful appreciation of the consideration invariably shown me by the Trustees of the Hospital, and of the faithful assistance of the officers and employees in the work of another year.

GEORGE T. TUTTLE,
Medical Superintendent.

SAMUEL ELIOT MEMORIAL CHAPEL, McLEAN HOSPITAL

McLEAN HOSPITAL, WAVERLEY, MASS.

TWENTY-FIFTH ANNUAL REPORT

OF THE

McLEAN HOSPITAL TRAINING SCHOOL FOR NURSES.

The Training School for Nurses, with the completion of the twenty-six years of its existence, has a roll of graduates including 596 names — 375 women and 221 men. In the following summary it is shown how many remain in the work of nursing, and into what positions in life others have gone.

	Men.	*Women.*
Number of graduates in twenty-three years	221	375
Graduates remaining in the service as nurses	17	22
Graduates remaining in the service as officers	2	5
Graduates in Mass. General Hospital Training School .		16
Pupils in Massachusetts General Hospital Training School		5
Previously graduated at Mass. Gen. Hospital Tr. School		130
Superintendents of hospitals	1	5
Superintendents of nurses, other hospitals		5
Asssistant superintendents of nurses		2
Employed in other institutions	11	10
Engaged in private nursing	45	137
Medical students	10	1
Physicians	33	3
Instructor in Physical Training		1
Sanitary Inspector		1
Dental students	1	
Dentists	10	
Masseur	1	2
Chiropodist	1	
Clergyman	1	
Missionary		1
Lawyers	4	
Students	1	1
In other business	50	1
At home	7	32
Married and left the profession		110
Deceased	14	17
Pupils now in this school	31	62
Unknown	12	3

It will be seen from this table that of 358 women graduates who are now living, 207 are still pursuing the work of nursing; and of the 207 men graduates who are now alive, 76 are still nurses, while 54 are physicians, dentists, or students of medicine or dentistry.

The complication in the work of teaching in the School, incident to the changes in the course of study from two to two and a half and then to three years, is somewhat lessened. All on the basis of two years are graduated. Twenty women are still in the two and one half years', forty-two women and thirty-one men are in the three years' course. At the end of another year all will be pursuing a uniform course of three years.

With the movement for the state registration of nurses and the efforts to raise the standard of the nurse's education, there came quite generally in training schools for nurses a lengthening of the course of study to three years. More recently there has been a reaction and there are those who say that two, or two and one half years is the proper length for such a course. It would seem to be evident that the length of time should depend on the amount and kind of instruction given. Very few hospitals contain within their own walls material to occupy a nurse advantageously for more than two years, but if their nurses are sent out to other special hospitals for additional instruction and experience, and if a preliminary course of study also is given, three years would not appear to be too long.

There is another fact which often is lost sight of in the somewhat theoretical consideration usually given to this question. There is no doubt that a young woman of ordinary ability and a fair preliminary education could acquire all the knowledge and experience necessary to begin her work as a private nurse, even including a knowledge of the nursing of special forms of disease, in two years if everything could be subordinated to the nurse's instruction. But she is paying for her living and education by her labor, and there is work to be done over and over again which is not absolutely necessary for her education, except it may be in the way of discipline, but which is necessary for the proper care of the patients. She therefore must spend more time than is needed merely to learn what she wishes to know. Most of the training schools of this country are established by hospitals for the benefit of their patients, and the necessity of the hospital constitutes the opportunity of a young woman to fit herself for the work of nursing while she is supporting herself and receiving a small sum of money for clothing and incidental expenses.

There is little demand for a school that charges even a moderate fee for tuition and board, for as a rule the young woman who can pay such expenses does not become a nurse. Such an education is not sought as an accomplishment but as a means of support. This is written of women only because there is not yet so general an appreciation by men of the value to them of a nurse's education that they can be placed on the same basis of pecuniary compensation.

The education of the men is still largely gratuitous on the part of the Hospital and for its own interest.

Mention should be made of an increase of fourteen in the number of ward-maids as compared with the number four years ago. Thirty-five are now employed in the care of dining-rooms and in other domestic work of which the nurse can properly be relieved. There also has been an increase in the number of women nurses because of the preliminary course of study, and the opening of the Codman House.

George T. Tuttle,
Medical Superintendent.

McLEAN HOSPITAL TRAINING SCHOOL FOR NURSES, WAVERLEY, MASS.

1882–1908.

The Trustees of the Massachusetts General Hospital Corporation established a school for the instruction of nurses at the McLean Hospital in 1882. It gives to men and women desirous of becoming professional nurses a three years' course of training in general nursing, with special reference to the care of cases of nervous and mental disease. The School is conducted by the Superintendent of the Hospital under the authority of the Board of Trustees.

Those wishing to receive such a course of instruction should write to the Superintendent of the McLean Hospital, Waverley, Mass., giving a brief personal history and also the names and addresses of three responsible persons, not of their own kin, who know of their good character and capabilities. If on receipt of this letter it is thought advisable for such prospective candidates to make a formal application, blank forms especially provided for this purpose will be sent to them.

Candidates must be in sound health, and must send with their application a certificate from a physician certifying to the fact. They should preferably have had a high school education or its equivalent, and should be not less than twenty, nor more than thirty-five, years of age.

On furnishing satisfactory evidence of their probable fitness they will be received for two months on probation. If accepted at the expiration of this time they will sign an agreement to complete the prescribed course of three years. At the end of the first six months the record of each pupil is again carefully scrutinized and the right is reserved to terminate then, or at any other time, the connection of any pupil or nurse with the School and Hospital for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

The pupils reside in the Hospital and are employed as assistant nurses in its wards. Men probationers while on duty will wear ordinary plain clothing. The women are expected to dress plainly and neatly in a cotton gown, and are permitted to wear the cap and apron of the regular uniform. After formally joining the School, at the end of the period of probation, both men and women are required to wear the Hospital uniform while on duty in the wards. Each woman nurse is required to have a gymnasium costume, the material for which, if desired, will be furnished at moderate cost by the Hospital.

As compensation for their services, both men and women receive board, lodging, and laundry, instruction in nursing, and a certain amount of money, which for the women is only sufficient to purchase books and uniforms and to defray other absolutely necessary incidental expenses. The men, who for the present do not receive the preliminary course of study given to the women, are paid twenty dollars ($20) per month during the first eighteen months, and twenty-four dollars ($24) per month during the remainder of the course. The women receive seven dollars ($7) per month during the first eighteen months, and ten dollars ($10) per month during the remainder of the course; except that while at the Massachusetts General Hospital women receive the amount regularly paid in that school, which is six dollars ($6) per month. Most graduates engage in private nursing, or accept positions of trust in other institutions. Some are invited to remain in the service of this Hospital. Both men and women graduates of this School are paid thirty dollars ($30) per month. Graduates of this School who are also graduates of the Massachusetts General Hospital Training School for Nurses in Boston, are paid thirty-five dollars ($35) per month.

All pupils and nurses are allowed one afternoon, a part of Sunday, and two or three evenings off duty each week. They are also given a two weeks' vacation in each year, and no deduction of time is made for sickness unless it exceeds two weeks in any given year.

On completion of the full term of three years, nurses who have passed all the required examinations receive diplomas certifying to their period of training, their proficiency, and their good character.

COURSE OF INSTRUCTION.

Instruction is given for eight months of the year, from October 1 to June 1. It is no disadvantage to enter the School between May and October, since the pupil will get some practical knowledge of the care of patients before taking up the required study.

The course for men differs from that for women. The latter receive less money and are allowed more time for study.

A preliminary course of four months is given to the women, and during half of the first school year the pupil is given no more work on the wards than is necessary to put in practice the instruction received. This occupies about two hours daily. Most of the time is devoted to lectures, recitations, demonstrations, and laboratory work. Instruction to both men and women, chiefly by the officers of the Hospital, includes courses in anatomy, physiology, hygiene, bacteriology, drugs and materia medica, urinalysis, hydrotheraphy, physical exercise (including massage, medical gymnastics, and Swedish movements), housekeeping, dietetics and cookery, general nursing, obstetrical nursing (to women), and especially nursing of cases of nervous and mental diseases. There are written examinations in the middle and at the end of each school year, and pupils must attain on critical marking at least 60 per cent.

In order to give the pupil more practical experience in the nursing of general medical and surgical diseases than can be obtained in a special hospital, an arrangement has been made for each pupil nurse of the McLean Hospital Training School to spend eight months of the three years' course of study at the Massachusetts General Hospital in Boston. This is optional with the men. Women graduates of this School have the privilege, under certain restrictions, of returning to the Massachusetts General Hospital Training School for additional instruction. Such graduates will, after five months' satisfactory study, receive a diploma from that school in addition to the diploma received from the McLean Hospital Training School.

ANATOMY. Recitations from a text-book on anatomy and physiology are required, and a course of lectures is given on applied anatomy, in which the general plan is to describe the anatomy of the various physiological systems, to refer briefly to their origin and use, to explain the different injuries and diseases to which they are liable, and to describe the treatment and nursing care of these morbid conditions. There is an articulated and a disarticulated skeleton which the pupils can use for study. It is intended that each one shall see a post-mortem examination.

PHYSIOLOGY. In addition to recitations from a text-book, lectures are given on the blood, heart, circulation, vaso-motor system, digestion (mechanical and chemical), absorption, secretion, respiration, animal heat, movement, nervous system, and special senses. In the senior year another course of lectures is given on the nervous system — general anatomy and physiology, peripheral nerves, sympathetic system, spinal cord and medulla, cerebellum and cerebrum.

HYGIENE. Recitations from a text-book are required, and a course of lectures is given which includes a consideration of water, food, air, ventilation, heating, lighting, sewerage, disinfectants and disinfection, and personal hygiene.

BACTERIOLOGY. A text-book is used for recitations, and a course of lectures is given on benign and pathogenic bacteria, methods of cultivation and examination, the relation of pathogenic germs to various medical and surgical diseases, with a consideration of some of the more common of these diseases.

DRUGS AND MATERIA MEDICA. Instruction is given in the dispensary by lectures, demonstrations, and practical work. The pupils are taught to use the prescription balance and the various measures, and are given practise in weighing and folding powders, the different methods of measuring drops, etc. They are taught to make weight-to-volume solutions of various strengths, also percentage solutions such as are used in the operating room or for purposes of disinfection.

Instruction is also given in elementary chemistry and botany, on the drugs in ordinary use, poisons and their antidotes. The course is made a laboratory exercise so far as is possible.

URINALYSIS. There are brief lectures on normal and abnormal urines and the diseases in which they occur. These are followed by demonstrations of methods of analysis, and the nurse is taught by actual practice to make different tests. It is principally a laboratory exercise.

PHYSICAL THERAPEUTICS. Lectures and demonstrations are given on the various hydrotherapeutic procedures and their effects. The pupils are also given instruction in general massage and free standing movements of the Swedish system, the use of apparatus in the gymnasium, and games. They are also taught the use of the Zander apparatus, of electricity, and later in the course a more extended system of medical gymnastics. During the three years' course of instruction the nurse has frequent opportunity for the practical application of the knowledge gained in the treatment of patients.

HOUSEKEEPING. Instruction is given by the Assistant Superintendent of Nurses, the Supervisor, and the Head Nurses, and consists chiefly in actual demonstrations and practice on the wards of general household duties, and of such special duties as are required for the proper care of the patients.

DIETETICS AND COOKERY. Twenty-four exercises of three hours each are given the women each morning for one month, during which a lecture of one hour is followed by two hours of practical work. The men receive twelve exercises of two hours each. The instruction includes a consideration of the purchase of food, utensils, kitchen and dining-room furnishings; dietetics and general cookery, with special reference to the preparation and serving of food for the sick and the convalescent.

During the course meals are prepared and served by the pupils, to illustrate the laying of trays and tables and the duties of the hostess and waitress.

After sufficient practice in the care of the kitchen and dining-room, the pupils are taken to the wards to apply their knowledge, and throughout the remainder of their service in the Hospital they assist in serving food to the patients under the supervision of the instructor.

NURSING. The theory of general nursing is taught by text-books, lectures, and demonstrations, and a practical application of the instruction is made so far as the facilities of the Hospital will allow. Much of the ordinary routine work of a nurse is the same for patients treated here as for those in a general hospital, while in the matter of bathing, changing bed and personal clothing, serving food, giving enemata, etc., it is often much more difficult.

Additional experience in the nursing of various medical and surgical diseases is obtained during the eight months at the Massachusetts General Hospital.

The lectures on Nursing given during the second year include a description of various diseases, a consideration of methods of prevention, the various remedial measures employed in the treatment of these diseases, and their nursing care.

The teaching of obstetrical nursing is necessarily by the use of text-books and by lectures. Many nurses, after graduation, take a three months' course at some maternity hospital. The nursing of cases of nervous and mental diseases is taught by recitations, lectures, demonstrations in the wards by the Superintendent of Nurses, Supervisors, and Head Nurses, and actual practice in the care of the patients of the Hospital. Besides this, written reports of individual cases are required, and nurses are taught to observe and make daily notes of cases under their care.

Previous to the consideration of insanity, a brief description of the normal mind is given in eight lectures. In order to make it as practical as possible, patients are assigned to each nurse to observe and to report verbally upon as to the condition of the various mental states or faculties while they are under discussion. Lectures are given on the causation, symptoms, treatment, and nursing care of the different forms of mental disease, with special attention to the duties of the nurse.

FIRST YEAR.

WOMEN: OCTOBER — JANUARY.

PREPARATORY COURSE.

Applied Anatomy: *Lecture*, Dr. Abbott, 15 hours.
Physiology: *Lecture*, 12 hours.
Physiology: *Recitation*, Miss Stone, 12 hours.
Physiology and Hygiene (Hutchison): *Recitation*, Mrs. Holmes, 15 hours.
Hygiene: *Lecture*, Dr. Kell, 8 hours.
Hygiene: *Recitation*, Miss Woodward, 8 hours.
Bacteriology: *Lecture*, Dr. Packard, 8 hours.
Bacteriology: *Recitation*, Miss Woodward, 8 hours.
Dietetics and Cookery: *Lecture, demonstration, and practice*, Miss Swanson, 72 hours.
Drugs and Materia Medica: *Lecture, demonstration, and practice*, Mr. Full, 15 hours.

Housekeeping: *Demonstration and practice*, Miss McIntosh, 10 hours.

Nursing: *Demonstration and practice*, Miss Stone, 10 hours.

Massage: *Demonstration and practice*, Miss Taylor, 12 hours.

Gymnastics: *Demonstration and practice*, Miss Taylor, 12 hours.

FEBRUARY — MAY.

Applied Anatomy: *Lecture*, Dr. Abbott, 15 hours.

Personal Hygiene (Pyle): *Recitation*, Miss Woodward, 8 hours.

Bacteriology and Surgical Technic (Stoney): *Recitation*, Miss McIntosh, 8 hours.

Technic of Aseptic Surgery: *Demonstration and practice*, Miss McIntosh, 10 hours.

MEN: OCTOBER — MAY.

Applied Anatomy: *Lecture*, Dr. Abbott, 30 hours.

Physiology and Hygiene (Hutchison): *Recitation*, Dr. Fernald, 15 hours.

Hygiene: *Lecture*, Dr. Kell, 8 hours.

Hydrotherapy, Zander Apparatus and Electricity: *Demonstration and practice*, Mr. Holmes and Dr. Packard, 10 hours.

Massage: *Demonstration and practice*, Mr. Holmes, 12 hours.

Gymnastics: *Demonstration and practice*, Mr. Holmes, 12 hours.

Housekeeping: *Demonstration and practice*, Mr. Magoon and Head Nurses, 12 hours.

Nursing: *Demonstration and practice*, Mr. Magoon and Head Nurses, 12 hours.

SECOND YEAR.

WOMEN: OCTOBER — MAY.

Nursing: *Lecture*, Dr. Abbott, 30 hours.

Text-book of Nursing (Weeks-Shaw): *Recitation*, Miss McIntosh, 15 hours.

How to Care for the Insane (Granger): *Recitation*, Miss Woodward, 10 hours.

Materia Medica (Stoney); *Recitation*, Miss Stone, 8 hours.

Medical Gymnastics: *Demonstration and practice*, Miss Taylor, 12 hours.

Hydrotherapy, Zander Apparatus and Electricity: *Demonstration and practice*, Miss Taylor and Dr. Packard, 18 hours.

Medical and Surgical Nursing: *Massachusetts General Hospital, Boston*, 4 months.

MEN: OCTOBER — MAY

Nursing: *Lecture*, Dr. Abbott, 30 hours.

Text-book of Nursing (Weeks-Shaw): *Recitation*, Mr. Magoon, 15 hours.

Bacteriology: *Lecture*, Dr. Cady, 8 hours.

Drugs and Materia Medica: *Lecture, demonstration, and practice*, Mr. Full, 15 hours.

Technic of Aseptic Surgery: *Demonstration and practice*, Dr. Fernald, 10 hours.

Dietetics and Cookery: *Demonstration and practice*, Miss Bradt, 24 hours.

Medical and Surgical Nursing: *Massachusetts General Hospital, Boston*, 4 months. (Optional.)

THIRD YEAR.

WOMEN: OCTOBER — MAY.

Physiology of the Nervous System: *Lecture*, 6 hours.

Physiology and Hygiene (Hutchison): *Recitation*, Miss Woodward, 8 hours.

Mental Diseases: *Lecture*, Dr. Tuttle, 24 hours.

Handbook for the Instruction of Attendants on the Insane: *Recitation*, Miss Woodward, 5 hours.

Manual of Nursing (Humphry): *Recitation*, Miss Woodward, 10 hours.

Obstetric Nursing (Fullerton): *Recitation*, Miss Stone, 8 hours.

Urinalysis: *Lecture, demonstration, and practice*, Dr. Packard, 6 hours.

Medical and Surgical Nursing: *Massachusetts General Hospital, Boston*, 4 months.

MEN: OCTOBER — MAY.

Physiology of the Nervous System: *Lecture*, 6 hours.

Physiology and Hygiene (Hutchison): *Recitation*, Dr. Fernald, 8 hours.

Mental Diseases: *Lecture*, Dr. Tuttle, 24 hours.

How to Care for the Insane (Granger): *Recitation*, Dr. Fernald, 10 hours.

Handbook for the Instruction of Attendants on the Insane: *Recitation*, Dr. Fernald, 5 hours.

Manual of Nursing (Humphry): *Recitation*, Mr. Magoon, 10 hours.

Urinalysis: *Lecture, demonstration, and practice*, Dr. Packard, 6 hours.

Medical and Surgical Nursing: *Massachusetts General Hospital, Boston*, 4 months. (Optional.)

LIST OF HOUSE PUPILS.

Adams, Benjamin Faneuil Dunkin	Surg.	1863	Died 1895.
Adams, Charles Goldthwaite	Surg.	1850	Died 1852.
Albee, Fred Houdelett	South Surg.	1904	125 West 58th St., New York City.
Alden, Eliot	West Surg.	1902	716 East Madison Ave., Cleveland, Ohio.

THE

NINETY-FIFTH ANNUAL REPORT

FOR THE YEAR 1908.

The Committee appointed by the Trustees to prepare the Annual Report to the Corporation respectfully submit the following:

LAND.

The real estate of the McLean Hospital has been increased during 1908 by the purchase of two tracts of land at Waverley, one on Mill Street, containing about 71,800 square feet, and the other, the Brown Farm, so called, comprising fifty-six and forty-eight one hundredths (56.48) acres, which had been occupied by the Hospital for several years under a lease. Since its purchase a spring has been discovered upon the Farm which has a large flow of water, sufficient, it is believed, for more than the present needs of the Hospital. A pipe line has been laid connecting with the old line, and a pump-house is in process of construction, in which a pump will be installed.

Three (3) lots of land on Fruit Street in Boston, with the houses thereon, adjoining the grounds of the General Hospital, have been bought during the year. This purchase completed the ownership by the Corporation of the land bounded by Blossom

Street, Fruit Street, the old yard of the Hospital, and the Parkman land and buildings on Fruit Street Place. All the old houses upon this property, thirty-three (33) in number, have been torn down, the land graded and made a part of the Hospital yard, around which a brick wall with a gate at the foot of North Anderson Street has been built. The accompanying illustration shows this gate, and the new land.

Ten thousand (10,000) square feet of land on Hammatt Road, West Roxbury, lying between two pieces of land belonging to the Hospital, were acquired by purchase.

BUILDINGS.

A bay window has been added to the Wyman House at Waverley and a partition removed, which will admit more sun and air, and a room for continuous baths for patients is now building.

At the Convalescent Home the two rooms which were formerly used as a laundry have been thrown into one, making a very pleasant small ward and increasing the number of beds from thirty-two (32) to thirty-six (36). The extra space gained has been used to obviate the crowded condition of the beds for men in the old wards.

A veranda has been added to the Weld Ward at the General Hospital through the generosity of Dr. Charles G. Weld.

FINANCIAL.

During the year the system of accounting at the Hospital has been changed to a uniform system, adopted by several of the most prominent hospitals of the country. The adoption of this system makes it difficult to make detailed comparisons of the

BULFINCH BUILDING, GENERAL HOSPITAL.

financial results in the workings of this Institution in 1908 with former years, but it can be said in general terms that the General Hospital has done a larger business, at about $9,000 less expense than in 1907.

The McLean Hospital, on a basis of 1907 accounting, will show for 1908 that the receipts, including the income from the Special Funds, exceeded the expenditures by about $3,000, and the Convalescent Home will show a deficit of about $1,000.

The income from invested funds, as shown in the Treasurer's Report, is considerably less than in 1907, but this difference is not the result of a less earning power of the investments, but has come about through the receipt in 1907 of certain unusual settlements happening in that year, and also to a difference in the system of bookkeeping, which closed the books on December 31, and did not include certain January first dividends in 1908, which happened to come in in 1907 and appeared in the accounts of that year.

In connection with the new system of accounting, which deals with cash transactions only, it was considered advisable to charge off the various stocks and uncollected charges for board at the McLean Hospital, which has occasioned a nominal shrinkage of the General Fund to that extent.

Under this new system it is expected that hereafter comparisons and an intelligent understanding of the workings of the Institution will be clearer and more valuable than ever.

STATISTICAL.

AT THE GENERAL HOSPITAL IN BOSTON.

The total number of patients admitted during the year was 5,362 against 5,517 in 1907. The daily average was 291 against 279 in 1907. The total number treated during the year was 5,637. The actual work done by the Hospital, however, is shown by the total patients' days treatment, 106,034 in 1908, as opposed to 102,109 in 1907.

The number of free patients treated during the year was 3,558 as against 3,285 in 1907, and the number of paying patients in whole or in part was 2,079 as opposed to 2,364 in 1907.

In the Out-Patient Department the number of new cases treated was 20,729 as against 20,358 in 1907.

The total number of visits from these patients was 116,008; the average daily attendance 382, and the total number of prescriptions filled was 46,390.

The number of patients treated in the Accident Ward was 5,313 as opposed to 5,802 in 1907. The average number of days during which patients have remained in the Hospital was 20— against 18+ in 1907. In the early part of the year two of our wards were closed for a short period because of scarlet fever.

THE CONVALESCENT HOSPITAL IN WAVERLEY.

The total number of patients admitted during the year was 508 against 563 in 1907. The daily average was 28— against 26+ in 1907. The total number of days' board was 10,106, as opposed to 9,735 in 1907.

THE McLEAN HOSPITAL IN WAVERLEY.

The total number of cases admitted during the year was 168 as against 192 in 1907, and the daily average number of patients in the Hospital was 216 as against 200 in 1907. The total number treated during the year was 394.

The average duration of illness, from the beginning of the attacks in the cases recovered, was 10.81 months, and the average duration of their residence in the Hospital was* 5.72 months. The average weekly cost per patient in 1908 was $24.37 against $26.01 in 1907.

OFFICERS AND STAFF.

No changes have occurred in the Board of Trustees during the year.

The Corporation lost by death early in the year its President, Mr. Charles H. Dalton. At the request of the Trustees the following tribute to his memory was prepared by the Chairman:

"Charles H. Dalton was a member of the Board of Trustees of this Hospital during the years 1866 to 1881. He was President of the Corporation from 1888 until his death on Feb. 23, 1908. During this long connection with the administration of the Hospital he gave it the same vigorous, intelligent, and devoted service which marked his life in the many important public and private employments to which his time was so freely given.

"As Chairman of the Building Committee of the new Hospital at Waverley, he was untiring in his labors, and the highly satisfactory result of this, the greatest undertaking of the Hospital, is largely due to his courage and foresight.

"Two distinguished members of his family have served the Hospital in its medical administration, and in their memory our late associate together with his brother, Mr. Henry R. Dalton, established 'The Dalton Scholarship,' a lasting memorial of the conspicuous, devoted, and wise contribution of this family to the cause of medicine and humanity.

---

* The statistics of McLean Hospital are made out for the year ending Sept. 30, 1908, in order that they may be compared with the tables of other Insane Hospitals in the State.

"The Trustees of the Massachusetts General Hospital in affectionate remembrance of their late associate have entered this tribute upon their records."

In less than two months after the loss of its President, Mr. Franklin Haven, Treasurer of the Corporation, was suddenly removed by death. At the next meeting after his death the Board adopted the following minute:

"For nearly a quarter of a century, Franklin Haven, who died on April 7, 1908, served as Treasurer of the Massachusetts General Hospital.

"The trustees desire to place upon their records their grateful appreciation of his long, continuous, and valuable services, of his fidelity to the trust committed to his charge, of his unvarying courtesy of manner, and of his cheerful welcome to this room (the Directors' Room of the Merchants National Bank) where at his invitation we have held our meetings for so many years.

"His kindly and constant presence at our meetings will be greatly missed, and his memory long be cherished."

On Oct. 16, 1908, Mr. Charles H. W. Foster, who had been acting, since Mr. Haven's death, as Treasurer *pro tempore*, resigned as Secretary and was elected Treasurer and Mr. John A. Blanchard was chosen Secretary.

The following changes have taken place in the Staff. The term of office of Dr. Reginald H. Fitz as Visiting Physician expired, and the Trustees expressed to him their "regret that the time for his retirement through age limit had arrived" and also entered upon their records their "high appreciation of his services as Microscopist and Curator of the Pathological Cabinet from 1871 to 1889, Pathologist from 1889 to

1892, and Visiting Physician from 1888 to 1908." Services such as these not only add to the high reputation of the Hospital, but increase the welfare of the whole community.

Dr. Elbridge G. Cutler, Dr. Henry L. Morse, and Dr. Joel E. Goldthwait resigned from the Staff, and the appreciation of their services by the Trustees was expressed by their votes and communicated to those gentlemen.

Dr. Fitz and Dr. Cutler were appointed upon the Consulting Staff. Dr. Elliott G. Brackett was appointed Orthopedic Surgeon in the place of Dr. Goldthwait, and Drs. Eugene A. Crockett and Harris P. Mosher were appointed Aural Surgeons.

Dr. Frederic C. Shattuck was appointed Continuous Service Physician at the General Hospital and Dr. Richard C. Cabot as his Assistant.

In the McLean Hospital Dr. Guy C. Fernald resigned.

ADMINISTRATION.

In the Administration Department Dr. Herbert B. Howard resigned to accept the position of Superintendent of the Peter Bent Brigham Hospital. The Board accepted his resignation with regret and requested the Secretary to express to him their appreciation of his able and faithful administration and of the tact, justice, and courtesy shown by him in the settlement of the intricate affairs of the Hospital.

Dr. Frederic A. Washburn was appointed Administrator to fill the vacancy caused by the resignation of Dr. Howard, and Dr. Joseph B. Howland was appointed Assistant Administrator.

The Trustees express their gratitude to the Ladies' Visiting Committee and to many other ladies interested in the Hospital for the loyal and efficient service rendered by them in contributing to the comfort and entertainment of the patients.

In their Report for the year 1886, the Trustees said: "The excess of the ordinary expenses over the income is substantially due to the number of free beds at the General Hospital. That this deficit should cease to exist without curtailing the number of our free beds and diminishing our charity we must make large additions to the subscribers to our free beds." This is equally true at the present time. And the Trustees would again ask for a more generous support to the fund and annual subscription for free beds, to the end that a restriction in their number need not become an imperative necessity, resulting in a reduction in the number of free patients.

The pressing needs of the General Hospital are an Administration Building, a new Nurses' Home, and suitable quarters for graduate nurses employed by the Hospital. The Trustees would call attention to the Report of the Administrator and Resident Physician for the reasons given by him why these needs ought to be met now, and make an appeal to the friends of the Hospital for prompt and liberal contributions to enable them to make the needed improvements without delay.

The Medical Superintendent at the McLean Hospital has again brought to the notice of the Trustees the need of a new Nurses' Home at that Institution, a need too well known by the Trustees who have been prevented by the want of funds alone from erecting a new building for that purpose. For these funds the Trustees make an earnest appeal to the benevolent and charitable.

In conclusion the Trustees invite attention to the

Treasurer's Report; the Report on Donations; the Report of the Ladies' Visiting Committee, and the valuable reports of Drs. Washburn and Tuttle, and through them to the detailed reports of medical and surgical cases, records, and statistics.

DAVID P. KIMBALL,
FRANCIS HENRY APPLETON,
Committee on Annual Report.

DONATIONS FOR 1908.

The Committee on the Book of Donations reports that the following donations and legacies have been received during the year:

Donation,	Miss Georgina Lowell	$25.00
„	"A Friend"	1,000.00
„	in memory of Moses Williams	5,000.00
„	Mrs. B. L. Young	25.00
„	Philip S. Sears	25.00
Bequest,	Mrs. Anna S. C. Prince	650.00
„	Edward Gerrish	8,000.00
„	Henry Mulliken	79,865.00
Donation,	Miss Harriet O. Cruft	5,000.00
„	Mrs. W. Scott Fitz	5,000.00
Bequest,	Luther Farnham	466.63
„	J. Putnam Bradlee	168,033.28
„	Mrs. Grace M. Kuhn	10,000.00
Donation,	Nurses' Alumnæ Association	4,720.02
„	Charles W. Hubbard	25.00
„	Mrs. John H. Sturgis	10.00
From "Sundry Donors to Yearly Free Beds"		20,750.00
		$308,594.93

Donations to McLean Hospital Art Room Fund:

Henry Simonds	$10.00
Miss Marian Wetherell	25.00
„ Edith L. Simonds	10.00

These sums have been entered in the Book of Donations in the usual form.

George Wigglesworth,
Committee on the Book of Donations.

Massachusetts General Hospital,
December 31, 1908.

REPORT OF THE TREASURER.

In accordance with the Fifth Article of the By-Laws, the Annual Report of the accounts of the Massachusetts General Hospital, made up to the last day of December, 1908, is respectfully submitted, to be laid before the Corporation at its annual meeting.

MASSACHUSETTS GENERAL HOSPITAL.

C. H. W. Foster,

Treasurer.

Examinations of Accounts.

Boston, Feb. 5, 1909.

To the Committee on Accounts,

Massachusetts General Hospital:

Dear Sirs: — We have examined the books and accounts of the Massachusetts General Hospital, McLean Hospital and Convalescent Home, and of the Treasurer for the year ending Dec. 31, 1908, and hereby certify:

That all funds shown to have been received have been accounted for; that we have found vouchers or other satisfactory evidences of payment for all disbursements; that the various balances of Cash were on hand as called for by the books; that we have inspected securities and notes representing the items of Stocks, Bonds, Annuities Receivable and Notes Receivable, as shown in the Balance Sheet; and, that the accounts on the Treasurer's books are in agreement with the accounts which they represent on the books of the Hospitals.

Very respectfully,

EASTERN AUDIT COMPANY,

By Fred. A. Caton, *Manager.*

REPORT OF LADIES' VISITING COMMITTEE.

The Ladies' Visiting Committee are unable, in so brief a report, to enter into the details of their work in the wards of the Hospital. This work has been of great interest to them, and they believe it has been of benefit to the patients.

The Committee have received constant assistance from Miss Tippet, and on account of her intimate knowledge of the patients, her suggestions have been very helpful to the members of this Committee in their efforts to make their work more effective.

The Committee have now undertaken to include the entire Hospital in their friendly visiting. Two or three visitors are assigned to visit the Hospital each month of the year, and each visitor assumes for the time responsibility for the work of the Committee in certain wards. They have also undertaken more frequent visits to the Convalescent Home at Waverley, and they are now preparing to furnish some handiwork to those of the patients in the Home who may care for it. They believe a very simple occupation, voluntarily undertaken, will prove helpful during the period of convalescence.

The Committee are able to report a marked increase in the circulation of books in the wards, from the Warren Library. Several donations, including some of the best class of fiction, have been greatly appreciated, as books of this order are constantly called for. They are also glad to place on record the testimony of many patients in the Hospital to the excellent quality of the food, the faithful care of the nurses, and the skill of the physicians and surgeons in charge.

The members of the Ladies' Visiting Committee wish to thank the Administrator of the Hospital and his assistants for their courtesy, and to express to the nurses and to others in various departments, with whom they are brought in contact, their appreciation of their ever-ready cooperation.

Respectfully submitted,
CHARLOTTE S. SPRAGUE,
Secretary.

ANNUAL REPORT OF THE ADMINISTRATOR OF THE MASSACHUSETTS GENERAL HOSPITAL AND RESIDENT PHYSICIAN OF THE GENERAL HOSPITAL.

To the Trustees of the Massachusetts General Hospital:

Gentlemen:— I have the honor to submit my first report as Administrator of the Massachusetts General Hospital.

When, upon the resignation of Dr. Herbert B. Howard to become Superintendent of the Peter Bent Brigham Hospital, I was elected by your Board to the position of Administrator, the appointment was accepted with deep appreciation of the responsibility to the Trustees and to the community thus placed upon me.

The year has been a satisfactory one, upon the whole, at all three institutions. The actual cost of operating has been slightly less in 1908 than in 1907. The system of bookkeeping has been changed this year to agree with the uniform system of accounting which has been adopted by several New York hospitals and other large institutions. This system makes our accounts more easily understood by the general public and makes it possible to compare the expenditures of large general hospitals upon approximately the same basis. The change in the method of accounting makes it difficult to compare this year's expenditures with those of last year, and so in spite of the fact that the General Hospital spent less this year than last, the cost per patient per day shows greater. The reason is that this is the first time that the expenditures from the Special Funds have been counted in reckoning the per capita cost. Henceforth we shall be upon the same basis with other institutions which have adopted the system and it will be possible to compare the cost intelligently.

The receipts at the General Hospital from board of patients are $8,277.93 less in 1908 than in 1907. The lessened income of wage earners during the past year has been largely responsible for this. There have been more free patients than usual, and the amounts contributed by those who did pay something for their board were less than in the preceding year.

There has been an increase of $10,094.63 in the amount received from board of patients at the McLean Hospital. This is due mainly to the fact that more accommodations have been available, as this is the first full year that the Codman House has been used to its capacity, and the Women's Belknap, which had been partially closed for repairs, has been in service the greater part of the year.

The receipts for board at the Convalescent Home show an increase of $236.90 over 1907.

GENERAL HOSPITAL, BOSTON.

I would respectfully urge upon the Trustees the pressing needs of the General Hospital. Of first importance is an Administration Building. The entrance of the Hospital is entirely unsuited to the size of the institution. The offices are outgrown for the business carried on, and the congestion in narrow, dark corridors is serious and gives rise to well-grounded complaints. This is especially noticeable at visiting hours when long lines of the friends of patients pack the front corridor.

A new Administration Building would properly include quarters for the Resident Doctors and House Staff. The present accommodations for such officers are outgrown and unsuitable. We cannot quarter on the premises all of the House Doctors who should properly live here now, and the needs of the immediate future are quite beyond any accommodations which the Hospital can furnish.

An Administration Building could be so built that it would include an Accident Ward convenient of approach, equipped with modern facilities for the care of the injured, and in such a situation would be under easy control of the administrative officers.

Another pressing need is suitable quarters for graduate nurses employed by the Hospital. During the great expansion of recent years and the increased demand for better care of the patients, it has been necessary to employ skilled graduate nurses as assistant superintendents of nurses and at the head of departments, such as the Out-Patient Department, Surgical Building, and Accident Ward. For these positions we wish to retain the best of our graduates, and to do so it is essential that we should give them better accommodations than single, small sleeping rooms, such as are supplied to pupils of the Training School. To accomplish this, new construction is necessary. Either a new Nurses Home should be built, or an addition to the present building.

The orderlies and other men employed at the Hospital are at present crowded in the old Out-Patient Building and the attic of the Bulfinch Building. Suitable dormitories and rooms should be provided for these employees. If a new Nurses Home were built, the present building could be fireproofed and used for these men.

In urging these needs and the new construction involved I do not lose sight of the needs of the patients and the changes required in the present wards. We are all here to serve the patients, but before we can build for them we must perfect our organization, and also clear the ground for ward construction and the remodeling of old buildings. New ward buildings are necessary to properly house the present number of patients. In the Bulfinch Building, the Children's Ward is not suited for its purpose. All of the wards in this building are crowded. They should contain not more than two-thirds as many patients as they now have. Small wards are demanded, especially for the medical service. This is important, so that the different classes of cases may be separated. It is particularly desirable that cases of typhoid fever should be treated by themselves.

The Bulfinch Building should be made fireproof. This cannot well be attempted until new wards are built in which the patients may be placed while this work is being done.

The needs of the General Hospital as I have indicated them are numerous and costly, but they are urgent and should be met as I have outlined them above, or in such other manner as seems wise to your Board, if we are to maintain the high standard of our work and perfect it as the years go by. There has been no new building of importance at the General Hospital since the Out-Patient Building was finished in 1903. The amount of our work increases greatly from year to year, and the character of it improves. Both these things mean more facilities, and more officers and employees. Construction cannot lag if we are to reach a high grade of excellence in all branches of our work.

The increased yard of the Hospital is much appreciated. The razing of the neighboring tenements gives admittance to more light and air. It is hoped that the effect upon our elm trees will be beneficial. We have lost a number of these trees in recent years and those that remain are not in flourishing condition. A veranda has been added to the Weld Ward by the gift of Dr. Charles G. Weld.

The year at the General Hospital shows a falling off of the number of patients admitted to the Hospital wards; 5,362 in 1908, as opposed to 5,517 in 1907. The actual work done by the Hospital, however, is shown by the total patients' days treatment, 106,034 in 1908, as opposed to 102,109 in 1907. The average number of days each patient has been in the wards was larger this year than last. Twenty minus days in 1908. Eighteen plus days in 1907. In the early part of the year two of our wards were closed for a short period because of scarlet fever. There were 3,634 operations upon house patients as opposed to 3,212 operations in 1907.

The Accident Ward shows fewer visits this year than last, 5,313 in 1908, as opposed to 5,802 in 1907. Visits made to the Out-Patient Department show an increase: 116,008 in 1908, as opposed to 107,063 in 1907, making an average of 382 – visits a day in 1908, as opposed to 351+ visits per day in 1907.

Attention is invited to the reports of the Director of the Pathological Laboratory, Superintendent of the Training School for Nurses, and the Assistant Librarian, which are appended.

During the year Miss Alice O. Tippet, graduate nurse, has been employed as an "Executive Assistant." Her work has been in the wards among the patients. It is her business to make the acquaintance of every new patient admitted, select those who have needs, and see what we can do to aid them. In this work she has cooperated with the Ladies' Visiting Committee to their satisfaction. She has been the patients' friend, and has been of use to the Visiting Ladies so that they have not needed to waste their time and effort in finding which patients were in need of their sympathy and help. She has also been of use to this office in helping us place cases which have to be moved from the Hospital to an institution of a more chronic nature. This was work formerly done by an Assistant Resident Physician, but it was found to demand more time and attention than could be devoted to it by him. Miss Tippet's report to me brings out a fact which has impressed itself upon all hospital workers in Boston, and that is the need of a hospital for chronic cases other than the pauper sick.

I would here express to the Trustees my appreciation of the debt which the Hospital owes to the Ladies' Visiting Committee for the faithful visiting and generous thought which they have given the Hospital. We are also indebted to the ladies who have voluntarily given their services to social work in the Out-Patient Department, and other ladies not connected with either of these associations.

McLEAN HOSPITAL, WAVERLEY.

The new farm land acquired during the year will be of value to the McLean Hospital and, to a lesser extent, to the General Hospital and Convalescent Home. The fact that it contains a spring with a large flow of water is sufficient in itself to justify its purchase. It also gives us an increased area of grazing and arable land. A new piggery has been built. The small cottage on Mill Street opposite the farmhouse, which was acquired last year, has been made habitable and is now occupied by the Supervisor of the Men's Department at the McLean Hospital. Considerable expenditures have been made for repairs and furnishings, but much remains to be done in these two lines. The greatest need of the McLean Hospital, in the administration department, is a new power house situated at the foot of the hill.

The total patients' days treatment was 78,897 in 1908, as opposed to 72,956 in 1907.

CONVALESCENT HOME, WAVERLEY.

The year at the Convalescent Home has not been remarkable. The laundry has been given up and the work is done at the McLean Hospital. The two rooms which were formerly used for the laundry have been thrown into one and make a very pleasant ward of eight beds. This has enabled us to rectify the over-crowded condition in the other men's wards. The total number of beds at the Home is now 36, against 33 last year. The total patients' days treatment was 10,106 in 1908, as compared with 9,735 in 1907.

The statistics for all three branches of the Hospital will be found elsewhere in the Report.

I wish to thank your Board for the consideration shown the Administrative Officers of the Hospital and to state my appreciation of the faithful work of officers and employees.

FREDERIC A. WASHBURN,
Administrator.

TABLE NO. 1.

Comparative Statement of Statistics.

	1908.	1907.
Patients in Hospital January 1, 1908:		
Medical	100	98
Surgical	175	178
Total	275	276
Patients admitted during the year:		
Medical	1,908	2,021
Surgical	3,454	3,496
Total	5,362	5,517
Total patients treated during the year:		
Medical	2,008	2,119
Surgical	3,629	3,674
Total	5,637	5,793
Patients discharged during the year:		
Well	1,112	1,138
Much relieved	1,418	1,614
Relieved	1,823	1,803
Not relieved	308	248
Against advice	80	77
Died	465	471
Not treated	135	167
Total	5,341	5,518
Patients in Hospital at end of year:		
Medical	98	100
Surgical	198	175
Total	296	275
Total patients' days treatment:		
Free patients	58,516	48,674
Pay patients	47,518	53,435
Total	106,034	102,109
Percentage:		
Free days	55+	48—
Pay days	45—	52+
Total	100	100

Average patients per day:	1908.	1907.
Free	160+	133+
Pay	130+	146+
Total	291−	279+
Average time per patient in the Hospital	20− days	18+ days

REPORT OF TRAINING SCHOOL FOR NURSES.

The letters of inquiry in regard to the Training School have increased from 793 last year to 905. There were 34 applications for postgraduate work and three graduates of German and Dutch schools of nursing have requested the privilege of spending several months in the wards of this Hospital during the coming year. Two of our own graduates came to take the two months' postgraduate course in surgical work, but neither of them remained the full time.

There were 62 probationers admitted, 56 for the three years' course, and 41 of this number were accepted as pupils of the school. The other six were graduates of the McLean Hospital Training School; five were accepted for the thirteen months' course; one withdrew because of illness in her family. One pupil was dismissed for cause during the year and one was asked to withdraw. The number who completed the three years' course and graduated was 23. Eleven graduates of the McLean Hospital completed the thirteen months' course. Three others were prevented by serious illness from finishing their course. Fourteen pupils of the Children's Hospital completed the four months of ward duty. Twelve of the pupils had long illnesses; three were cases of typhoid fever and nine were contagious diseases. All made good recoveries.

The demand for our graduates to fill positions grows steadily and is far greater than can be met. The positions offered last year numbered 65. There were many requests for practical teachers of nursing methods, for district and school nurses, and for social workers, in addition to the usual calls for superintendents of small hospitals and of training schools. Almost invariably graduates of experience have been asked for. The six months' course in institution management, recently established in the Hospital, meets the need of providing training and experience for those who would become hospital superintendents.

Although the school shows larger numbers, it is still impossible to supply nurses for some departments where their services are needed. Consequently we have made an arrangement with the New England Baptist Hospital for one year to receive one pupil at a time for two months who shall assist at the clinics in the Men's Surgical room in the Out-Patient Department during forenoons and in the Accident Ward afternoons. This pupil has the privilege of attending the lectures which are given to our pupils. At the request of the superintendent of the Melrose Hospital, it has been decided to receive the senior pupils from that hospital for two months' general ward duty.

By mutual agreement the plan of receiving pupil nurses from the McLean Hospital for eight months' training has been given up. Twelve pupils entered and ten of the number completed the course.

In January the number of assistant superintendents of the Training School was increased from two to three, and Miss Jessie E. Grant was appointed to the position. During the year we lost two important members of the school staff who had given us many years of most efficient service. In May Miss Frances A. Chandler, the second assistant superintendent of the Training School, resigned to become superintendent of a hospital; and in October Miss Nellie J.

Hart, the night superintendent, resigned to be married. They were succeeded by Miss Frances C. Daily and Miss Elizabeth M. Jamieson.

The surgical instructor appointed for the year was Dr. Robert M. Green. The preparatory course for pupils at Simmons College has been offered us for three years' trial without fees; this year the Hospital Trustees have generously undertaken the payment of a tuition fee of $50 for each pupil.

The supervision and instruction of pupils who are on duty as special nurses is continued by Miss Margaret Lea, who also is head nurse of Ward B. The special duty of pupils increased to 1,026 days last year. The Surgical Out-Patient Clinic for women and the Hydrotherapy are now in charge of Miss Margaret K. Smith.

In July a graduate of this school, Miss Alice O. Tippet, was appointed executive assistant; her duties consist in cooperating with the Ladies' Visiting Committee and in finding suitable places in homes or institutions for the ward patients who need such provision when they are discharged from the Hospital.

Our thanks are again offered to the ladies of the Advisory Committee whose visits to the nurses, both on duty in the ward and during illness, have been most welcome. They have also remembered us generously with tickets for concerts and entertainments throughout the year.

The present Training School Staff is as follows:

Superintendent	1
Assistant Superintendents	3
Night Superintendent	1
Graduate Head Nurses	20
Postgraduate Pupils	3
Pupils, Class of 1909	25
Pupils, Class of 1910	35

Pupils, Class of 1911	30
McLean Hospital Graduates	6
McLean Hospital Pupils	1
Probationers	2
Pupils in Preparatory Course	10
Total	137

Special Instruction :

Diet Kitchen	Miss E. Grace McCullough.
Massage	Miss S. May Taylor.

Respectfully submitted,

PAULINE L. DOLLIVER,
Superintendent Training School.

SURGICAL INSTRUCTION.

Given by Robert M. Green, M.D.

The surgical teaching covers the first two years of the course in the Training School. During the first year instruction is given in the following subjects:

Bandaging.
Anatomy.
Biology.
Bacteriology.
Pathology.

The method of instruction is by weekly lectures, at which the nurses are expected to take notes and of which they are required periodically to prepare abstracts, by demonstrations and recitations, and by assigned reading in a text-book.

The attempt is made to have the lectures simple and informal, to encourage the asking of questions by the class, to emphasize always the practical importance to surgical nursing of the subject under study.

There are two written examinations during the course.

BANDAGING.

The instruction is given to small sections of the class once a week. After consideration of the manufacture, economy, and indications for bandages, the fundamental figures of bandaging are taught, followed by detailed instruction in the common bandages used for the several regions of the body. By the use of artificial legs and of patients from the wards, each nurse has opportunity to apply the various bandages under the individual direction of the instructor. The application of swathes and the preparation of the ordinary splints is demonstrated by the instructor or by one of the head nurses.

ANATOMY.

The normal anatomy of the adult human body is considered under the following topics:

The skeleton (bones and joints).
Muscles, fascia, and skin (with its appendages).
The alimentary system.
The respiratory system.
The cardio-vascular and lymphatic systems.
The genito-urinary system.
The nervous system.
The organs of special sense.

In connection with the gross anatomy under each of these topics is taught the elementary histology of the tissues in question and the attempt is made to correlate this instruction with that given in physiology. Especial attention is paid to surface anatomy, not only to bony landmarks in relation to fractures and measurements but to the location of the large blood vessels with reference to the control of hemorrhage. The lectures are illustrated by pictures, lantern slides, microscopic sections, the manikin, fresh organs from autopsy, and demonstrations on the living subject. Particular emphasis is laid on the relations of the male and female pelvis with regard to the use of the catheter and the rectal tube. In general, the practical rather than the academic aspects of the subject are made prominent.

BIOLOGY.

The primary concepts of vegetable and animal life are briefly considered, and the relation of lower organisms to human disease. The cellular theory is explained, and the normal development of the human embryo outlined.

BACTERIOLOGY.

After a sketch of the development of the science of bacteriology and the enormous importance of its discoveries to medicine and surgery, the nature, action, and growth of bacteria are described and the methods of identifying and cultivating them studied. By means of material from the hospital laboratories are demonstrated the cultural and microscopic characteristics of all the common surgical bacteria, and in connection with each is taught the mode of action by which it produces disease.

Great emphasis is laid on the practical application of bacteriology to the treatment and the prevention of disease. The history and evolution of antisepsis and asepsis are sketched, methods of sterilization described at length, and the duties of a nurse at a surgical operation explained. Instruction is given in methods of avoiding infection, both for the nurse and for the patient, and in its prompt recognition and treatment. The elementary principles of immunity and of the use of bacterial vaccines are outlined.

PATHOLOGY.

In connection with the study of the various bacteria is taught the elementary pathology of the lesions produced by each. The nature of inflammation is explained, and the repair of tissues and the healing of wounds studied.

During the second year instruction is given in surgical anesthesia and in the surgical diseases. The method is similar to that of the first year — by weekly lectures, notes, abstracts, demonstrations, recitations, and two written examinations. Emphasis is laid on the practical application of the knowledge gained to the immediate care and subsequent nursing of surgical cases.

ANESTHESIA.

A lecture is given to the class on the fundamental principles of surgical anesthesia and the methods of its production. During the year each nurse then receives at least twice individual instruction in the actual administration of ether to patients for surgical operation, and is also taught the manufacture of cones and the care of ether patients.

SURGICAL DISEASE.

All the important surgical diseases are considered in detail, under the following groups:

Trauma.
Malformations.
Neoplasms.
Infections.

In the discussion of each disease are presented its causes, nature, symptoms, recognition, and immediate treatment. The subjects are abundantly illustrated by lantern slides, pathologic specimens, and patients from the wards. So far as possible the case method of teaching is employed. Attention is also paid to diseases on the border line between medicine and surgery. The aim is to familiarize the nurse with the common appearances of disease, to fit her by this knowledge to care intelligently for the sick, and to prepare her to act promptly and efficiently in emergencies.

MEDICAL INSTRUCTION.

Given by George S. C. Badger, M.D.

The present method of teaching has been in force for several years, and is proving very satisfactory. The work is carried on as follows:

During the first five months physiology alone is taught by lectures and quizzes, supplemented with the use of the reflectorscope. A knowledge of the fundamentals of physiology is essential and must be acquired before other instruction can advantageously be given. A few nurses receive their instruction in physiology at Simmons College, but the majority must receive it while giving their services in the wards. The latter are at a disadvantage because often too tired to give their concentrated attention to a lecture after a day's work. Following the course in physiology are two lectures on hygiene.

In the second half of the first year the nurses are taken into the medical wards in sections of twenty, where once a week for a year a medical clinic is held. These ward visits are by far the most interesting and profitable part of the course. In spite of the fact that the nurses are constantly with the patients, it is found that systematic instruction in the observation of patients and diseases and the results of treatment are very much needed and appreciated. Much time is devoted to diseases of the circulatory, respiratory, digestive, and excretory organs, and to typhoid fever. The subject matter of lectures is apt to be soon forgotten, while the mental pictures of actual disease conditions seen at the bedsides are retained. The progress of diseases is watched, the results of treatment noted.

The last half of the second year is taken up with lectures on therapeutics, and certain diseases not seen in the open wards, as the exanthemata and tuberculosis.

It is apparent with this system of instruction that the nurses have become better clinical observers and more intelligent and enthusiastic workers.

The outline of the two years' course is as follows :

First half of first year :

- Physiology, fourteen lectures with demonstrations, quizzes, and examination.
- Hygiene, two lectures.

Second half of first year and first half of second year :

- Clinical medicine, ward visits.

Last half of second year :

- Lectures on Therapeutics, The Exanthemata, Tuberculosis.

NURSING.

Course Given to Probationers by Demonstrations.

Care of refrigerators and water coolers.
Sweeping and dusting.

Beds and bedmaking :

- Care of linen.
- Disinfection of beds, linen, etc.

Care of bed patients :

- Bathing and care of skin, mouth, teeth, head, hands, and feet.
- Filling and applying ice-caps and hot water bottles.
- Application of abdominal swathes.

Reception and care of new patients.

- Observing and reporting symptoms.
- Charting — temperature, pulse, respiration.
- Food — medication.

Enemeta : Uses. Methods.
Douches — Catheterization.
Surgical Dressings.
Surgical Supplies.
Sterilizing Instruments.

Subsequent Instruction by Lectures, Recitations, and Demonstrations.

Ethics : Relation of pupil { to Hospital. / to Training School. / to Patients.

Care of Hospital Property.
Care of Patients' Property.
Ward Supplies.
Hygiene: Personal. Ward.
External Applications.
The Urine.
Nursing in typhoid fever cases, in diseases of the lungs, heart, kidneys. Rheumatism.
Nursing of contagious diseases.
Nursing of sick children and infants.
Nursing in nervous diseases.
Obstetrical nursing.
Gynæcological nursing.
Emergency cases. Fractures.
Assisting at operations : sterilization : uses of disinfectants : the uses, care, and repair of instruments and utensils.
Care of the dead.
Private nursing.

THIRD-YEAR LECTURES.

ETHICS.

Dr. Richard C. Cabot — 1 hour

NURSING IN GENITO-URINARY CASES.

Dr. Franklin G. Balch — 1 hour

NURSING OF SICK CHILDREN.

Given by Dr. J. Payson Clark

NURSING IN ABDOMINAL SURGERY.

Dr. Maurice H. Richardson 1 hour

[*The circular of information which is sent to applicants.*]

THE MASSACHUSETTS GENERAL HOSPITAL TRAINING SCHOOL.

The Massachusetts General Hospital Training School for Nurses in Boston has made arrangements for giving a three years' course of training to women who desire to learn the art of nursing the sick:

Letters of application to the Superintendent of the Training School should contain a brief personal history, and should be accompanied by a statement from a physician testifying to sound health and unimpaired faculties. Applicants must be between twenty-one and thirty-five years of age, and of at least average height and weight.

A high school education or its equivalent is required, and applicants should be prepared to show school diplomas or certificates as an aid in determining the amount of education they have received.

The Superintendent of the Training School and the Resident Physician of the Hospital decide as to the acceptability of candidates. The class is formed during the spring and summer months, but application should be made at least six months in advance. If approved, applicants are received for a period of two months' probation, and during this time they should be prepared for an examination in reading, English dictation, and simple arithmetic. The Superintendent of the Training School will decide as to their fitness for the work, and the propriety of retaining or dismissing them.

Those who prove satisfactory are accepted, and become pupils of the School on signing an agreement to remain thirty-four months, after the period of probation, and to obey faithfully the rules of the Hospital and of the School.

During he first twelve months the record of the pupil is carefully considered, and if found unsatisfactory or unpromising, the Superintendent of the Training School can drop the pupil from the School. She may, at any subsequent time, suspend, and with the approval of the Resident Physician and the Training School Committee, dismiss a pupil for misconduct, inefficiency, or neglect of duty.

Except under special circumstances, failure to pass the examinations will be sufficient cause for terminating a pupil's connection with the School.

Pupils reside in the Home, and act as assistants in the various departments of the Hospital. They are expected to perform any duty assigned them by the Superintendent of the Training School.

The hours of duty are from 7 A.M. to 7 P.M.

A vacation of three weeks is given each year.

In sickness, the pupils are cared for gratuitously, but all time so lost must be made up.

As the school is unsectarian, there are no religious services connected with it; but all pupils are expected to attend the places of worship they prefer once on Sunday.

An allowance of $6.00 per month, exclusive of the months of probation, is made to defray the necessary expenses of uniforms and text-books.

Pupils receive board, lodging, and a limited amount of laundry work.

Pupils should come prepared to pay at the close of the period of probation for their uniforms and text-books, the cost of which will not exceed fifteen dollars.

A regular course of lectures, recitations, and demonstrations is given, with examinations at stated periods. Instruction is also given at the bedside of patients by the visiting and resident physicians and surgeons.

The course includes three months' special training in obstetrics, three months in private nursing at the Corey Hill Hospital, Brookline, and one month district nursing with the Instructive District Nursing Association.

For those who desire it a preparatory course of four months is offered at Simmons College devoted to the study of the following subjects:

Household Arts.
Chemistry.
Bacteriology.
Anatomy.
Physiology.

When the full term of training is completed, after passing the examinations, the nurse receives the diploma of the School, and is at liberty to choose her own field of labor, either in hospital or district work, or in private families. As it is believed that an annual report of the addresses and positions of the graduates of the School will be for the advantage of the nurses as well as the School, the graduates are requested to send their addresses to the Superintendent of the Training School on or before December first of each year.

A graduate of this School who wishes to gain special proficiency in the care of nervous and mental cases has the privilege, under certain restrictions, of entering the McLean Hospital Training School for Nurses. Such graduates will, after one year's satisfactory study, receive the diploma from that School in addition to the one received from the Massachusetts General Hospital Training School for Nurses.

Personal application may be made to the Superintendent of the Training School, Wednesday mornings, between 10 and 12 o'clock.

Postgraduate Course.

A two months' Postgraduate Course is open to the graduates of this Training School. The course consists of two months' surgical work, or of two months' medical work, or of one month each of medical and surgical work, as the graduate prefers.

Students must provide themselves with the uniform of the School. They live outside the Hospital, pay no fee, and receive no pay for this course. Their hours of duty conform to those of the pupils of the School, and they act as assistants in the wards.

Those who wish to take this course should apply to the Superintendent of the Training School, and state definitely what experience they wish to have, and the time when they could most conveniently take the course.

During the summer months there would be more openings for graduates, but, so far as possible, appointments will be made to suit the convenience of the applicants.

REPORT OF THE PATHOLOGICAL LABORATORY.

The usual routine bacteriological, chemical, microscopical, and pathological examinations in connection with the study of diseases of the patients in the Hospital have been carried on during 1908. During the year two hundred and five autopsies were performed in the Laboratory, including those performed by the Medical Examiner. Dr. Oscar Richardson has continued to do most of the important work of performing the autopsies and keeping the autopsy records. He has also carried on the routine bacteriological examinations required by the Hospital.

The facilities and material offered by the Laboratory for the instruction of physicians and of students of the Harvard Medical School in bacteriology, pathological anatomy, pathological histology, and in diagnosis by laboratory methods have continued to be extensively utilized.

The weekly demonstrations of pathological material and discussions of the clinical aspects of the cases conducted in the Laboratory before fourth-year medical students and others have been continued during the year by Drs. R. C. Cabot, Oscar Richardson, and J. H. Wright.

Instruction in pathology to second-year students and special courses in this subject to fourth-year students have been given by Dr. Wright. During the summer, courses in pathological anatomy and clinical pathology for graduates in medicine were given by Dr. Oscar Richardson ; Drs. W. H. Smith and R. I. Lee cooperating in the latter course. Eighteen physicians attended these courses. It is worthy of note that most of them came from outside the city and several from other states.

A special room in the Laboratory has been assigned again for the laboratory work of certain students of the Harvard Medical School who are studying in the wards of the Hospital. Laboratory facilities have also been provided for the students in the summer courses conducted by Dr. F. T. Lord.

The treatment of cases of bacterial infections by the subcutaneous injection of killed cultures of the infecting bacteria has been continued in the Laboratory during the year on a larger scale than before. Including a number of cases treated in the wards and in the Lying-In Hospital, nearly five hundred patients were treated during 1908. Most of these patients came to the Laboratory rather than to the Out-Patient Department to receive injections, because those who administer the treatment require the facilities of a well-equipped bacteriological laboratory close at hand, and spend much of their time and energy in obtaining cultures of the patient's own infecting bacteria and in preparing special material for injection from these. Most of this time-consuming and exacting work, requiring a practical knowledge of bacteriology and skill in a special technique, has been done by Dr. H. F. Hartwell assisted by Dr. E. C. Streeter. Drs. R. I. Lee and R. M. Green have also participated in the work.

The results obtained in many of these cases will be published soon by Dr. Hartwell and his collaborators. For the present it may be stated that this method of treatment has been followed by very satisfactory results in many of the cases and that it seems to be an important addition to therapeutics.

Facilities for special studies in various branches of pathology, bacteriology, and chemistry have been afforded as usual to a number of special workers. Among these may be mentioned the following: Dr. Mark W. Richardson has continued his study of the specific treatment of typhoid fever; Dr. Wyman Whittemore has investigated the value of hæmolysis in the diagnosis of cancer, and, in conjunction with Dr. Roger I. Lee, has begun a study of the Wasserman reaction for the diagnosis of syphilis; Dr. F. T. Lord has studied the epidemic of influenza and has conducted investigations on tuberculin; Drs. H. S. Denison and L. H. Newburg have studied the blood of pernicious anæmia with reference to hæmolysis; Dr. Oscar Richardson, in cooperation with Dr. C. J. White, completed an extensive study of an obscure case of leprosy; Dr. J. H. Wright has studied the properties of the blood platelets and their relation to thrombosis and the coagulation of the blood. In a part of this work he has been assisted by Dr. H. K. Marks. Dr. Wright also worked upon the revision for the fourth edition of the text-book "Pathological Technique," of which he is joint author with Dr. F. B. Mallory.

Concerning the work done in the Chemical Laboratory, Dr. Wm. F. Boos reports as follows: "The scope of the laboratory work has greatly increased during the past year. The house pupils have been encouraged to carry on systematically more advanced chemical work in conjunction with the clinical observation of ward cases. Besides numerous chemical tests supposed heretofore to be beyond the training of the house pupils, the latter have carried out a series of careful studies on the metabolism of kidney diseases, as well as of the acidosis in cases of diabetes mellitus.

Dr. F. W. Peabody has prepared concentrated solutions of pyocyanase and has studied the action of this body on B. diphtheriæ and other organisms.

Dr. Haskell has begun an investigation of surgical acetonuria.

In order to determine the value of the so-called "Cammidge reaction" Dr. P. W. Harrison has applied this test to a large number of urines including the specimens from all cases of pancreatic disease. He has also examined the urine of dogs for the Cammidge body. A stable crystalline derivative of the body yielding the Cammidge test having been obtained by Dr. Boos, Dr. Harrison is at work to identify this most interesting urinary constituent by means of its derivative. Other tests designed to throw light on the function of the pancreas have been applied by Dr. Harrison in all suitable cases.

Dr. F. T. Lord has been at work on methods to concentrate cultures of the tubercle bacillus without the use of heat.

Dr. Wilder Tileston has continued his studies on fat absorption in cases of pancreatic disease. As Dalton scholar he has been engaged in an extensive study of a case of probable benign disease of the pancreas in which pancreatic digestion is entirely absent. There is also achylia gastrica in this case. The metabolism is being determined under various forms of diet, both with and without the use of drugs, pancreatic preparations. and pepsin-hydrochloric acid. The various functional tests for pancreatic disease have also been applied.

Besides continuing his studies of eclampsia Dr.

Boos has been at work on methods for clinical quantitation of albumin and urea. He has devoted considerable time to a study of the excretion of lead and of methods for its detection in the excreta. A paper on this subject was read by Dr. Boos at the clinical meeting of the staff on Nov. 13, 1908. His research on the reducing component of yeast nucleic acid is to appear in the January number of the Journal of Biological Chemistry.

At a meeting of the Norfolk District Medical Society held Dec. 29, 1908, Dr. Boos spoke on the pharmacological action of the digitalis group, as also on the indications for the intravenous use of strophantin."

A number of papers based in whole or in part on subjects and observations made in the Pathological Laboratory proper and in the Chemical Laboratory under Dr. William F. Boos, have appeared during the year. The titles and authors of these papers are set forth below. It may be worthy of mention that to one of these papers was awarded the Boylston Medical Prize for 1908 of the Harvard Medical School.

"Primary Carcinoma of the Hepatic Ducts," by Charles L. Scudder, M.D., and O. Richardson, M.D. (Annals of Surgery, Vol. XLVII., p. 728.)

"Endocarditis," by A. K. Stone, M.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 65.)

"Lymphosarcoma of the Tonsil," by J. L. Goodale, M.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 409.)

"Final Report on a Case of Stokes-Adams Disease," by H. F. Vickery, M.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 435.)

"Etiology of an Epidemic of Influenza. Relation of the Influenza Bacillus and Other Organisms to the Recent Epidemic in Boston (1907–08). Comparison with an Inter-Epidemic Period (1902–04)," by F. T. Lord, M.D. (Journal of Medical Research, Vol. XIX., p. 295.)

"Experimental Study of the Conjunctival Tuberculin Test in Guinea Pigs Infected with Human, Bovine, or Avian Tubercle Bacilli; Specificity, Reaction, Unity of the Group; Lack of Sensitization," by F. T. Lord, M.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 639.)

"The Subcutaneous, Cutaneous, and Conjunctival Use of Tuberculin in Diagnosis; Technic; Reliability; Results of Animal Experimentation," by F. T. Lord, M.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 779.)

"Acute Yellow Atrophy of the Liver. A Report of Two Cases, One with Ascites," by Wilder Tileston, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 510.)

"Certain Aspects of the Treatment of Infections with Bacterial Vaccines," by Roger I. Lee, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 14.)

"A Differential Stain for Nucleated Red Cells," by L. H. Newburgh, M.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 868.)

"On the Present Status of Serum and Vaccine Therapy," by Mark Wyman Richardson, M.D. (Transactions of the Association of American Physicians, Vol. XXIII., 1908, p. 449.)

"Some Personal Experience with Specific Vaccines in the Treatment of Bacterial Disease," by Mark Wyman Richardson, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 12.)

"Facts and Speculation Concerning the Nature of Typhoid Fever," by Mark Wyman Richardson, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 688.)

"The Use of Tuberculin in the Treatment of Localized Tuberculosis Excluding Pulmonary Tuberculosis," by Roger I. Lee, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 671.)

"Age and Its Relation to Arteriosclerosis and Death from Arteriosclerosis," by William H. Smith, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 701.)

"Two Cases of Atypical Leukemia," by Williston W. Barker, M.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 609.)

"On the Toxin of Eclampsia," by William F. Boos, M.D., Ph.D. (Boston Medical and Surgical Journal, Vol. CLVIII., p. 612.)

"On the Excretion of Lead," by William F. Boos, M.D., Ph.D. (Boston Medical and Surgical Journal, Vol. CLIX., p. 860.)

"Pathological Technique. A practical manual for workers in pathological histology and bacteriology, including directions for the performance of autopsies and for clinical diagnosis by laboratory methods," by Frank Burr Mallory, M.D., and James Homer Wright, M.D., S.D. Fourth edition. (W. B. Saunders Company, 1908.)

"The Histogenesis of the Blood Platelets," by James Homer Wright, M.D., S.D. (Not yet published.) To this essay was awarded the Boylston Medical prize for 1908.

Respectfully submitted,
JAMES HOMER WRIGHT, M.D., S.D.
Director.

ANNUAL REPORT

OF THE

TREADWELL LIBRARY.

The work of the Library force has steadily increased during the past year, as is shown in the appended table of statistics. Readers number nearly 500 more than in 1907, and the number of cards added to the clinical catalogues exceeds by over 1,000 the number of last year. Eighty-five volumes of Records have been compiled and indexed, ready for binding. It has been necessary to store away about 150 volumes of the oldest Records in another part of the building, in order to accommodate the new books. More room is needed in every way : for the library, for the Records, and for the workers.

Gifts of books have been received as follows : From Dr. J. C. Warren, Dr. F. C. Shattuck, Dr. G. L. Walton, Dr. J. G. Mumford, Dr. R. C. Cabot, Dr. J. H. Wright, Dr. H. B. Howard, Dr. F. A. Washburn, Dr. G. O. Clark, Dr. J. B. Hawes, 2d, Dr. C. H. May of New York, Dr. Aldo Perroncito of Italy (the winner of the Warren Prize of 1907), Harvard University, the Medical Library of McGill University, Montreal, the University of Manchester, England, the State and Municipal Governments, and the United States Government. Thanks are hereby expressed to the various Associations and Societies who have again contributed copies of their Transactions.

A smaller number than usual of reprints has been received. It is desired to keep in the Library as complete a file as possible of the writings of all members of the Hospital Staff, and of ex-House Officers, and each one is invited to send reprints as they appear. These files are already large enough to be valuable, although by no means as complete as it is hoped to make them.

A renovating coat of paint applied to the walls during the summer has given the Library a much fresher and more attractive appearance.

Following are statistics :

BOOKS.		
No. of vols. on hand Jan. 1, 1908		6,889
Purchased	37	
Gifts	56	
Periodicals bound	103	
Total no. of bound vols. added		196
Making total no. of accessions		7,085
Given away		18
No. of vols. on hand Jan. 1, 1909		7,067
No. of vols. loaned	211	
Approximate number of readers	1,771	
PAMPHLETS.		
No. on hand Jan. 1, 1908		3,779

WORK ON HOSPITAL RECORDS.

No. of vols. indexed and prepared for binding		85
Cards written :		
For Clinical catalogues	10,632	
For Name catalogue	5,870	
Total	16,502	
No. of Records abstracted or copied . . .		358

Respectfully,
GRACE W. MYERS,
Assistant Librarian and
Keeper of Records.

DALTON SCHOLARSHIP.

The income of this fund, amounting to $500 annually, is devoted to investigation in the science of medicine. The rules of the Trustees applicable to it are as follows:

ARTICLE 1. Candidates shall be nominated to the Board of Trustees by a Committee consisting of the General Hospital Staff and the Director of the Pathological Laboratory, with recommendations for the information of the Board. They shall be either Internes of the General Hospital or male graduates of a regular American Medical College.

ARTICLE 2. The nature of the work in medical investigation proposed to be prosecuted by each candidate shall be designated.

ARTICLE 3. Scholars shall be appointed by the Board from among the candidates named.

ARTICLE 4. Scholars shall be under the supervision of the Staff and the Staff shall, whenever it thinks desirable, report to the Board any dissatisfaction it may feel as to the work or methods of scholars, and the Board may act in the premises as in the case of Internes.

ARTICLE 5. Scholars are required to do an amount of work equivalent to not less than ten hours per week from the last Wednesday in September to the last Wednesday in June, and to present to the Trustees, at the end of the year, a report on the amount and result of the work performed. The results of work of scholars shall appertain to the Hospital, and when made public, the name of the scholar shall accompany the publications; but no publication shall be made unless recommended by the Staff and approved by the Board.

Article 6. Should the work of a scholar extend through a part of the year only, he shall be entitled to a proportionate share of income.

Article 7. When the income is insufficient, appointments for the year may be omitted.

Article 8. Any income not used shall be cumulative and not added to the principal.

Article 9. Scholars shall be eligible for renomination and reappointment.

Article 10. Candidates for scholarship should make written application to the Resident Physician of the Massachusetts General Hospital on or before May 15, and the scholarship shall be held for one year from September 15 following.

Further information may be had by applying to the Resident Physician of the Massachusetts General Hospital.

WARREN TRIENNIAL PRIZE.

MASSACHUSETTS GENERAL HOSPITAL.

The Warren Triennial Prize was founded by the late Dr. J. Mason Warren in memory of his father, and his will provides that the accumulated interest of the fund shall be awarded every three years to the best dissertation, considered worthy of a premium on some subject in Physiology, Surgery, or Pathological Anatomy; the arbitrators being the Physicians and Surgeons of the Massachusetts General Hospital.

The subject for competition for the year 1910 is on some Special Subject in Physiology, Surgery, or Pathology.

Dissertations must be legibly written, and must be suitably bound, so as to be easily handled. The name of the writer must be enclosed in a sealed envelope, on which must be written a motto corresponding with one on the accompanying dissertation. Work which has already been published will not be received in competition.

Any clue given by the dissertation, or any action on the part of the writer which reveals his name before the award of the prize, will disqualify him from receiving the same.

Essays must be typewritten in English, French, or German.

The amount of the prize for the year 1910 will be $500.

In case no dissertation is considered sufficiently meritorious, no award will be made.

A high value will be placed on original work.

FREDERIC A. WASHBURN,

Resident Physician.

RULES FOR ADMISSION, ETC.

Application for admission of patients should be made at the Hospital on Blossom Street, Boston, on week days between the hours of 9 and 11 A.M. and 2 and 3 P.M.

Recent accidents admitted at all hours.

Out-patients received on Fruit Street, between the hours of 8.30 and 10 A.M., week days only. Out-patient service is for the poor only.

Applications from a distance should be made in writing, accompanied by a full description of the case by the attending physician, with reason of the physician for thinking hospital treatment desirable, and when a free bed is needed, by a statement of the pecuniary condition of the patient. Always wait for a reply before sending the patient.

Contagious and chronic diseases are not admitted.

Regular charges to paying patients are as follows: In the Jackson Ward (private), $35 per week; in small room in the Townsend and Bigelow Wards, $21 per week; in the General Wards, $10.50 per week. These rates, covering only expenses of board and lodging, may be increased or abated in individual cases by the Resident Physician.

An ambulance, accompanied by a medical officer will be despatched to any point within the city proper for the conveyance of cases of accident or urgent sudden sickness, not contagious, to this Hospital, or elsewhere, upon notice from a physician, the police, or other responsible source, subject to the approval of the Resident Physician.

In cases requiring gratuitous treatment no charge will be made.

MEDICAL AND SURGICAL STATISTICS.

MEDICAL DISEASES.

FROM JANUARY 1, 1908, TO DECEMBER 31, 1908, INCLUSIVE.

MASSACHUSETTS GENERAL HOSPITAL.

OUT-PATIENT'S REPORT

For the Year ending December 31, 1908.

NUMBER OF NEW PATIENTS, 20,729.

Men, 9,520. Women, 6,967. Children (under 14), 4,242
American, 10,093 Foreign, 10,636
Residents of Boston, 10,145 Residents of other places, 10,584
Total attendance, 116,008

MALE SURGICAL.

No. of new patients, 3,952 No. of old patients, 22,789

FEMALE SURGICAL.

No. of new patients, 2,647 No. of old patients, 14,261

MALE MEDICAL.

No. of new patients, 2,593 No. of old patients, 4,359

FEMALE MEDICAL.

No. of new patients, 3,918 No. of old patients, 7,717

SKIN.

No. of new patients, 2,224 No. of old patients, 8,784

NERVE.

No. of new patients, 844 No. of old patients, 5,752

THROAT.

No. of new patients, 2,734 No. of old patients, 8,750

ORTHOPEDIC.

No. of new patients, 1,817 No. of old patients, 8,235

ZANDER.

No. of old patients, 8,925

HYDROTHERAPEUTIC.

No. of old patients, 4,282

SUBURBAN TUBERCULOSIS CLASS.

No. of old patients, 1,425

ANNUAL REPORT (NINETY-FIRST)

OF THE

SUPERINTENDENT OF THE McLEAN HOSPITAL.

To the Trustees of the Massachusetts General Hospital:

The following report of the McLean Hospital for the year 1908 is respectfully submitted.

The whole number of patients under treatment during the calendar year was 345, which is 28 less than for 1907. The daily average number was 215.54, an increase of 16 over that of the previous year. The recoveries were 33.6 per cent of the admissions and 34.7 per cent of the dismissals. Of the 128 admissions 67 per cent were voluntary patients, five of whom were afterward formally committed, and there remained in the Hospital December 31 on the voluntary basis 69 persons, 37 men and 32 women. The statistical tables presented herewith are for the year ending September 30 in accordance with the requirement of the State Board of Insanity.

Repairs of various houses have been much more extensive than usual and there has been some new construction. The halls and rooms of the Bowditch House have been repainted and linoleum laid on the floors of the halls. The Proctor House also has been quite thoroughly renovated and is now in good condition. Twenty-four rooms on the third floor of the Women's Belknap House, occupied by nurses, have been put in order, with new tubs in the bath rooms ; and twelve wardrobes have been built in the third floor of the Codman House, which changes have very materially improved the accommodations for a number of our nurses. All the furniture of four sitting rooms in the Women's Belknap House has been recovered and rugs have been laid on the corridors of this house and on four large halls of the Upham Memorial House. The cottage opposite the farm house has been thoroughly renovated and is occupied by the supervisor of the men's department.

Most important changes are being made in the Wyman House. A partition in the center of the house which divided a service corridor from the main hall has been removed and a spacious sitting room has thus been obtained. A bay-window of two stories has been built on the south side, which adds eight feet to the length of the two sitting rooms and admits an abundance of light. Two new skylights have been placed where additional light was needed. These changes have improved the ventilation, added greatly to the cheerfulness of the house, and have provided additional space in the sitting rooms which was so much needed. A one story addition is being finished on the northeast side of the house, which will provide two bath rooms, one for two, the other for three tubs, which are to be used in the treatment of excited patients by means of the continuous warm bath. The ordinary bath room with its small, high placed window offers few attractions for its continuous occupation. These new rooms will be well lighted, cheerful, and have an outlook that will afford some diversion to the patients. The bath-tubs will be of special construction, adapted to the purpose.

The men's gymnasium is now undergoing renovation, which includes a restaining of the finish of the house to a darker and richer color and painting of the walls throughout. This is the men's club for all who are well enough to use it.

The hospital laboratories are the centers for our medical work. Dr. Folin, who has been the head of the chemical laboratory where he has done such advanced and valuable work since Oct. 1, 1900, was obliged to resign October 31, to give his whole service to the Harvard Medical School where he is associate professor of biological chemistry. Since Dr. Folin's departure the laboratory has been under the direction of Mr. Erdmann. Work has been continued on "the separation of methylamine and ammonia as applied to urine analysis and its significance in metabolism experiments." This is not yet finished, but will be ready for publication in a few months. Work also has been started in connection with the chemistry of the brain. It is a new field of research so far as this laboratory is concerned, and time will be required to show results.

"The work of the psychological laboratory has proceeded almost exclusively along the lines indicated in the previous report. The anomalous fatigue phenomena in manic-depressive depressions have been studied in a number of other cases, and seem to afford a fairly precise indication of the presence and extent of motor retardation in these disorders. The result of the method in thirteen cases has been published, and the remainder of the cases studied, including observations with other psychoses, are practically ready for publication.

In that large group of cases, mainly dementias, which are inaccessible to observations involving voluntary cooperative effort, the study of the involuntary responses to experimentally given situations is indicated as a fruitful problem. The possibilities of this field are well indicated in the recent work of Diefendorf and Dodge. Efforts are being made in the laboratory toward the study of vaso-motor and allied responses, especially as influenced by affective elements. The immediate clinical bearing of this inquiry is the problem presented, in certain cases, of the differentiation between the retardation of manic-depressive insanity and the blocking of dementia præcox.

Some work directed toward the standardization of psychological tests, especially those of association, has also been carried on in the laboratory, the conditions of which are peculiarly adapted to problems of this nature.

The principal additions to the equipment of the laboratory are a rotary transformer, and a continuous record kymograph especially adapted for the continuous registration of the movements of a beam of light."

" During the last year work in the clinical department has been carried on along the same lines as adopted now for some years. A special effort has been made to get accurate, detailed histories of the cases previous to the time of entrance to the Hospital. Owing to the class of cases usually admitted it is possible, as a rule, to obtain excellent information as to heredity, educational and social environment, and the reaction of the patient thereto–facts indicating the general character and make-up of the individual–as well as the details of onset and development of the attack. Soon after entrance, and at frequent intervals throughout their stay at the Hospital, the patients are carefully observed and thorough mental examinations made with the aid of such psychological tests as are applicable. The physician is aided not only by the assistants, but also by the nurses who are especially instructed in the observation of patients and the daily recording of the results of such observation. A summary of the nurses' notes for the time between the observations of the physician not only gives continuity to the records but often furnishes valuable additional information.

Such complete histories and records are naturally of great assistance in forming an opinion as to diagnosis and prognosis, but more than that they furnish the data for later scientific work. The Hospital has now accumulated data of this kind extending back for nearly fifteen years, and it is the custom from time to time to send out letters of inquiry concerning patients who have left the Hospital in order to complete the records and bring them up to date. In this way we obtain observations of individual cases extending over many years. At the present time in addition to the routine work we have begun collecting additional information concerning some five hundred patients, many of whom left the Hospital ten years ago. When these records shall have been brought up to date in this way they will form a very excellent data for scientific work and it is proposed to study them and publish the results."

In the pathological department six autopsies have been done during the year and the grosser pathological findings recorded.

The following papers have been published during the year by :

Dr. Folin, " Chemical Problems in Hospital Practice." (Journal of the American Medical Association, May 2, 1908.)

"On Total Sulphur Determinations in Urine." (Journal of the American Medical Association, January, 1909.)

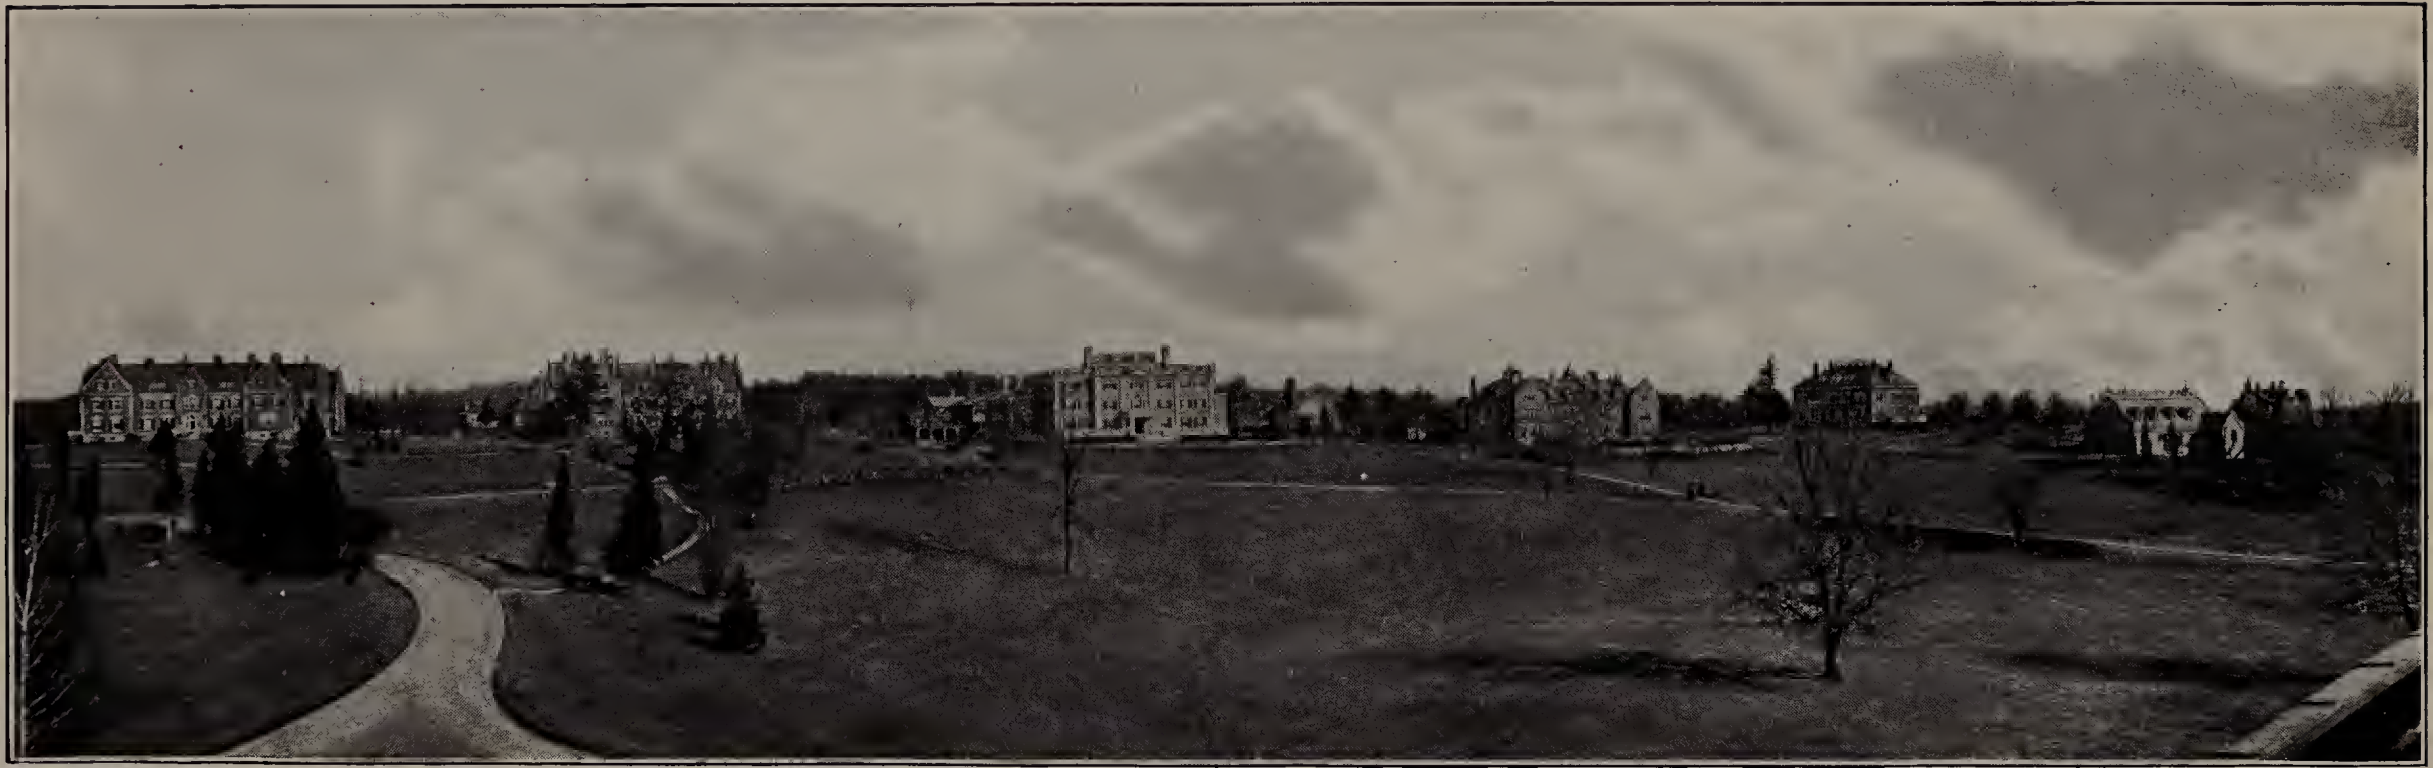
Dr. Wells, "Technical Aspects of Experimental Psychopathology." (The American Journal of Insanity.)
"A Neglected Measure of Fatigue." (The American Journal of Psychology.)
"Normal Performance in the Tapping Test." (The American Journal of Psychology.)
"Studies in Retardation." (The American Journal of Psychology.)
In collaboration with Dr. Cady, "A Critique of the Psycho-Galvanic Reflex, with Some Experiments." (Abstract of a paper read at a meeting of the New England Society of Psychiatry, March 31, 1908.) (The American Journal of Insanity.)

Reviews :

Van-Ginneken, "Principes de Linguistique Psychologique." (Journal of Philosophy, Psychology, and Scientific Methods.) Wieg-Wickenthal, "Zur Klinik der Dementia Præcox." (Journal of Philosophy, Psychology, and Scientific Methods.)

There has been expended during the year $943.88 on the libraries, of which sum $252.27 was for the general library and $691.61 for the medical libraries.

The library, devoted to the use of patients, now numbers 5,811 volumes, 283 having been added in the year. The room has been entirely redecorated and partially refurnished; window seats have been added and it now is most attractive. The patients come here in the evening where with an open fire, periodicals, and books they can spend a pleasant hour. It is a great resource and is invaluable in our work.



PROCTOR HOUSE. MEN'S BELKNAP. PIERCE BUILDING. WOMEN'S BELKNAP. APPLETON HOUSE. CHAPEL. SUPT'S HOUSE.

McLEAN HOSPITAL.

The space is already insufficient and many of the books, at least thirty-five shelves, are consigned to the basement till more room is provided. An almost ideal arrangement would be to add to the library the large square room across the passage way, after building shelves around the walls. It is in need of repair and it is hoped that this change may be made during the coming year.

The medical libraries located in the medical offices and the laboratories now number 4,522 volumes, 230 having been added during the year. It is indispensable for the physicians who try to do good work and is becoming one of the most valuable assets of the Hospital.

The loans to the art rooms during the year are eight oils and seventeen water colors. There have been gifts of twenty-nine oils; one was presented by Miss Emery and twenty-eight by Mrs. Henry S. Grew, Mrs. Henry Pickering, Mrs. W. S. Fitz, Mrs. A. S. Porter, Jr., Mr. Edward Wigglesworth, and Mr. George Wigglesworth. These twenty-eight pictures have been hung together in the art room of the women's gymnasium and have made a most interesting collection. Twelve framed photographs, and several more unframed, were presented by Charles P. Greenough, Esq. Forty-three pictures were framed in the carpenter shop during the year by men patients and have been hung in the Proctor and Wyman houses. There now remain, chiefly loans, hung in the art rooms of the two gymnasiums, eighty-nine oils, fifty-one pastels and water colors, and thirty-four photographs.

Although something over half the number of women nurses are comfortably accommodated on the third floors of the Codman and Belknap houses they, and the others, still are in rooms over the patients and have not the feeling of freedom and relaxation when off duty which they would have in a house devoted entirely to their use. I venture to make another plea for such a house in the interest of the young women who are doing valuable work and who should have the opportunity of rendering such trying service under the most favorable conditions.

It is one of the most important requirements of a good hospital that the food should be of sufficient variety, well cooked, and properly served. A special effort is being made to improve the dietary and to this end another officer has been added to the Hospital Staff. Miss Elizabeth Hinchman was engaged September 1, and was given charge of the culinary department with gratifying results. Steam-tables are being placed in the serving rooms, which will lead to changes in the matter of cooking and serving food and it is hoped, with a high degree of expectation, that there will be a still further improvement in the immediate future.

The following changes in the Hospital Staff have taken place during the year: Dr. Ralph C. Kell, Junior Assistant Physician, resigned June 30 to accept the position of Second Assistant Physician in the Worcester State Asylum. Dr. Otto Folin, Assistant in Pathological Chemistry, resigned October 31 to give his entire service to the Harvard Medical School. Dr. Frederic B. M. Cady, Junior Assistant Physician, resigned November 5 to engage in private work. Mr. Elmer D. Full, apothecary, resigned November 6 and was succeeded by Mr. Bernard C. Burdette. Dr. Guy G. Fernald, Second Assistant Physician, resigned November 13 to accept the position of Physician to the Massachusetts Reformatory. He had been an officer of the Hospital for over nine years and had rendered most faithful service. He was succeeded November 27 by Dr. Earl D. Bond who had been a Junior Assistant Physician since July 1. Dr. Edmund M. Pease was elected a Junior Assistant Physician October 1 after having served in that capacity since June 21. Miss Elizabeth Hinchman assumed charge of the culinary department September 1. Miss Emma M. Stone, Supervisor of the Women's Department, was given leave of absence August 31; Miss Clara H. Luscombe has been the acting Supervisor since that date. Mr. George A. Allen, storekeeper, withdrew from the service August 31. He was succeeded October 22 by Mr. Rufus F. Ames.

My thanks are due and are here expressed to all who have aided in the hospital work by faithful and cheerful service and to the Trustees for their invariable kindness and support.

George T. Tuttle,
Medical Superintendent.

TWENTY-SIXTH ANNUAL REPORT

OF THE

McLEAN HOSPITAL TRAINING SCHOOL FOR NURSES.

The Training School for Nurses, with the completion of the twenty-seven years of its existence, has a roll of graduates including 615 names — 394 women and 221 men. In the following summary it is shown how many remain in the work of nursing, and into what positions in life others have gone.

	Men.	*Women.*
Number of graduates in twenty-three years	221	394
Graduates remaining in the service as nurses	9	26
Graduates remaining in the service as officers	3	5
Graduates in Mass. General Hospital Training School .		9
Pupils in Massachusetts General Hospital Training School		1
Previously graduated at Mass. Gen. Hospital Tr. School		141
Superintendents of hospitals	1	5
Superintendents of nurses, other hospitals		6
Assistant superintendents of nurses		3
Employed in other institutions	7	14
Engaged in private nursing	59	142
Medical students	12	1

Dental Students	1	
Dentists	9	
Masseur	1	2
Principal of High School	1	
Clergyman	1	
Missionary		1
Lawyers	3	
In other business	60	1
At home		34
Married and left the profession		116
Deceased	14	19
Pupils now in this school	45	62
Unknown	6	4

It will be seen from this table that of 375 women graduates who are now living, 211 are still pursuing the work of nursing; and of the 207 men graduates who are now alive, 75 are still nurses, while 56 are physicians, dentists, or students of medicine or dentistry.

Another change has been made in the length of the course of study in the school. It is made two and a half years for both men and women. The men did not care to avail themselves of the privilege of spending eight months at the Massachusetts General Hospital for additional experience in general nursing, and the women preferred to get this experience in a post-graduate course as, except for a recent short period of time, has always been the custom. It also was found expedient to make the change for reasons pertaining to the nursing service from the point of view of the Hospital. The women graduates still have as before the privilege under certain restrictions of taking a post-graduate course of thirteen months at the Training School of the Massachusetts General Hospital in Boston.

Because of change in the course no man was graduated this year.

It has been found best to arrange the studies on a basis of six terms of four months each; October to January inclusive, and February to May inclusive, examinations being held in the last two weeks of each term. Since pupils are admitted to the school at all times of the year, men can enter upon their studies at the beginning of the term nearest to the time of their admission, and take the studies of that and the succeeding terms till they have completed their two years and a half. If they enter at a time nearer to the beginning of the second term (February to May), they will take the studies of the first term of the first year in addition to those of the second year, so far as it can be arranged for them so to do. For women pupils most of the studies of the preliminary course of four months are repeated during the second term, so that those entering during the winter receive their preliminary training before taking up the rest of the course. If they enter the school late in the term they attend the course of lectures on applied anatomy from the time of their entrance, and in the succeeding year attend the earlier lectures of that course. In other words, lectures, recitations, and other exercises are given as for a three years' course of two terms of four months each year and pupils entering the school at different times take what they can of these exercises during the two and a half years that they are in the school. Pupils entering late in October get nearly three years of continuous instruction, since they have but two summer vacation periods in their course. Those entering in the late spring get two years of school work and three summer vacation periods. It is inevitable that there should be this discrepancy in the amount of instruction given to different pupils unless a five term course were arranged and started at the beginning of each semester, and instruction given in the four months of June to September inclusive. This would put an impossible amount of teaching on the shoulders of the present force of instructors.

George T. Tuttle,
Medical Superintendent.

McLEAN HOSPITAL TRAINING SCHOOL FOR NURSES, WAVERLEY, MASS.

1882–1909.

The Trustees of the Massachusetts General Hospital Corporation established a school for the instruction of nurses at the McLean Hospital in 1882. It gives to men and women desirous of becoming professional nurses a two and a half years' course of training in general nursing, with special reference to the care of cases of nervous and mental disease. The school is conducted by the Superintendent of the Hospital under the authority of the Board of Trustees.

Those wishing to receive such a course of instruction should write to the Superintendent of the McLean Hospital, Waverley, Mass., giving a brief personal history and also the names and addresses of three responsible persons, not of their own kin, who know of their character and capabilities. If on receipt of this letter it is thought advisable for such prospective candidates to make a formal application, blank forms especially provided for this purpose will be sent to them.

Candidates must be in sound health, and must send with their application a certificate from a physician certifying to the fact. They should preferably have had a high school education or its equivalent, and should be not less than twenty, nor more than thirty-five years of age.

On furnishing satisfactory evidence of their probable fitness they will be received for two months on probation. If accepted at the expiration of this time they will sign an agreement to complete the prescribed course of two and a half years. At the end of the first six months the record of each pupil is again carefully scrutinized and the right is reserved to terminate then, or at any other time, the connection of any pupil or nurse with the School and Hospital for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

The pupils reside in the Hospital and are employed as assistant nurses in its wards. Men probationers while on duty will wear ordinary plain clothing. The women are expected to dress plainly and neatly in a cotton gown, and are permitted to wear the cap and apron of the regular uniform. After formally joining the School, at the end of the period of probation, both men and women are required to wear the Hospital uniform while on duty in the wards. Each woman nurse is required to have a gymnasium costume, the material for which, if desired, will be furnished at moderate cost by the Hospital.

As compensation for their services, both men and women receive board, lodging, and laundry, instruction in nursing, and a certain amount of money, which for the women is only sufficient to purchase books and uniforms and to defray other absolutely necessary incidental expenses. The men, who for the present do not receive the preliminary course of study given to the women, are paid twenty dollars ($20) per month during the first fifteen months, and twenty-four dollars ($24) per month during the remainder of the course. The women receive seven dollars ($7) per month during the first fifteen months, and ten dollars ($10) per month during the remainder of the course. Most graduates engage in private nursing, or accept positions of trust in other institutions. Some are invited to remain in the service of this Hospital. For the first six months after graduation men who remain in or return to the service of the Hospital receive twenty-seven dollars ($27) per month, women twenty-five dollars ($25) ; after that they both are paid thirty dollars ($30) per month. Graduates of this School, who are also graduates of the Massachusetts General Hospital Training School for Nurses in Boston, are paid thirty-five dollars ($35) per month.

All pupils and nurses are allowed one afternoon, a part of Sunday, and two or three evenings off duty each week. They are also given a two weeks' vacation in each year; and no deduction of time is made for sickness unless it exceeds two weeks in any given year.

On completion of the full term of two and a half years, nurses who have passed all the required examinations receive diplomas certifying to their period of training, their proficiency, and their good character.

Women graduates of this School who wish to have additional practical experience and instruction in general nursing have the privilege, under certain restrictions, of entering the Training School for Nurses at the Massachusetts General Hospital in Boston. Such graduates will, after thirteen months' satisfactory study, receive the diploma from that School, in addition to the diploma received from the McLean Hospital Training School.

COURSE OF INSTRUCTION.

Instruction is given for eight months of the year, from October 1 to June 1. It is no disadvantage to enter the School between May and October, since the pupil will get some practical knowledge of the care of patients before taking up the required study.

The course for men differs from that for women. The latter receive less money and are allowed more time for study.

A preliminary course of four months is given to the women, and during half of the first school year the pupil is given no more work on the wards than is necessary to put in practice the instruction received. This occupies about two hours daily. Most of the time is devoted to lectures, recitations, demonstrations, and laboratory work. Instruction to both men and women, chiefly by the officers of the Hospital, includes courses in anatomy, physiology, hygiene, bacteriology, drugs and materia medica, urinalysis, hydrotherapy, physical exercise (including massage, medical gymnastics, and Swedish movements), housekeeping, dietetics and cookery, general nursing, obstetrical nursing (to women), and especially nursing of cases of nervous and mental diseases. There are written examinations in the middle and at the end of each school year, and pupils must attain on critical marking at least 60 per cent.

Women graduates of this School have the privilege, under certain restrictions, of going to the Massachusetts General Hospital Training School for additional instruction. Such graduates will, after thirteen months' satisfactory study, receive a diploma from that school in addition to the diploma received from the McLean Hospital Training School.

Anatomy. Recitations from a text-book on anatomy and physiology are required, and a course of lectures is given on applied anatomy, in which the general plan is to describe the anatomy of the various physiological systems, to refer briefly to their origin and use, to explain the different injuries and diseases to which they are liable, and to describe the treatment and nursing care of these morbid conditions. There is an articulated and a disarticulated skeleton which the pupils can use for study. It is intended that each one shall see a post-mortem examination.

Physiology. In addition to recitations from a text-book, lectures are given on the blood, heart, circulation, vaso-motor system, digestion (mechanical and chemical), absorption, secretion, respiration, animal heat, movement, nervous system, and special senses. In the senior year another course of lectures is given on the nervous system — general anatomy and physiology, peripheral nerves, sympathetic system, spinal cord and medulla, cerebellum and cerebrum.

Hygiene. Recitations from a text-book are required, and a course of lectures is given which includes a consideration of water, food, air, ventilation, heating, lighting, sewerage, disinfectants and disinfection, and personal hygiene.

Bacteriology. A text-book is used for recitations, and a course of lectures is given on benign and pathogenic bacteria, methods of cultivation and examination, the relation of pathogenic germs to various medical and surgical diseases, with a consideration of some of the more common of these diseases.

Drugs and Materia Medica. Instruction is given in the dispensary by lectures, demonstrations, and practical work. The pupils are taught to use the prescription balance and the various measures, and are given practice in weighing and folding powders, the different methods of measuring drops, etc. They are taught to make weight-to-volume solutions of various strengths, also percentage solutions such as are used in the operating room or for purposes of disinfection.

Instruction is also given in elementary chemistry and botany, on the drugs in ordinary use, poisons and their antidotes. The course is made a laboratory exercise so far as is possible.

URINALYSIS. There are brief lectures on normal and abnormal urines and the diseases in which they occur. These are followed by demonstrations of methods of analysis, and the nurse is taught by actual practice to make different tests. It is principally a laboratory exercise.

PHYSICAL THERAPEUTICS. Lectures and demonstrations are given on the various hydrotherapeutic procedures and their effects. The pupils are also given instruction in general massage and free standing movements of the Swedish system, the use of apparatus in the gymnasium, and games. They are also taught the use of the Zander apparatus, of electricity, and later in the course a more extended system of medical gymnastics. During the two and a half years' course of instruction the nurse has frequent opportunity for the practical application of the knowledge gained in the treatment of patients.

HOUSEKEEPING. Instruction is given by the Assistant Superintendent of Nurses, the Supervisor, and the Head Nurses, and consists chiefly in actual demonstrations and practice on the wards of general household duties, and of such special duties as are required for the proper care of the patients.

DIETETICS AND COOKERY. Twenty-four exercises of three hours each are given the women each morning for one month, during which a lecture of one hour is followed by two hours of practical work. The men receive twelve exercises of two hours each. The instruction includes a consideration of the purchase of food, utensils, kitchen and dining room furnishings; dietetics and general cookery, with special reference to the preparation and serving of food for the sick and the convalescent.

During the course meals are prepared and served by the pupils, to illustrate the laying of trays and tables and the duties of the hostess and waitress.

After sufficient practice in the care of the kitchen and dining room, the pupils are taken to the wards to apply their knowledge, and throughout the remainder of their service in the Hospital they assist in serving food to the patients under the supervision of the instructor.

NURSING. The theory of general nursing is taught by text-books, lectures, and demonstrations, and a practical application of the instruction is made so far as the facilities of the Hospital will allow. Much of the ordinary routine work of a nurse is the same for patients treated here as for those in a general hospital, while in the matter of bathing, changing bed and personal clothing, serving food, giving enemata, etc., it is often much more difficult.

The lectures on nursing given during the second year include a description of various diseases, a consideration of methods of prevention, the various remedial measures employed in the treatment of these diseases, and their nursing care.

The teaching of obstetrical nursing is necessarily by the use of text-books and by lectures. Many nurses, after graduation, take a three months' course at some maternity hospital. The nursing of cases of nervous and mental diseases is taught by recitations, lectures, demonstrations in the wards by the superintendent of nurses, supervisors, and head nurses, and actual practice in the care of the patients of the Hospital. Besides this, written reports of individual cases are required, and nurses are taught to observe and make daily notes of cases under their care.

Previous to the consideration of insanity, a brief description of the normal mind is given in eight lectures. In order to make it as practical as possible, patients are assigned to each nurse to observe and to report verbally upon as to the condition of the various mental states or faculties while they are under discussion. Lectures are given on the causation, symptoms, treatment, and nursing care of the different forms of mental disease, with special attention to the duties of the nurses.

FIRST YEAR.

WOMEN: OCTOBER — JANUARY.

PREPARATORY COURSE.

Applied Anatomy: *Lecture*, Dr. Abbot, 15 hours.
Physiology: *Lecture*, 12 hours.
Physiology: *Recitation*, Miss McIntosh, 12 hours.
Physiology and Hygiene (Hutchison): *Recitation*, Mrs. Holmes, 15 hours.
Hygiene: *Lecture*, Dr. Bond, 8 hours.
Hygiene: *Recitation*, Miss Woodward, 8 hours.
Bacteriology: *Lecture*, Dr. Packard, 5 hours.
Bacteriology: *Recitation*, Miss Woodward, 8 hours.
Dietetics and Cookery: *Lecture*, *demonstration*, *and practice*, Miss Swanson, 72 hours.

Drugs and Materia Medica: *Lecture, demonstration, and practice,* Mr. Burdette, 15 hours.

Housekeeping: *Demonstration and practice,* Miss McIntosh, 10 hours.

Nursing: *Demonstration and practice,* Misses McIntosh, Leach, and Macdonald, 10 hours.

Massage: *Demonstration and practice,* Miss Taylor, 12 hours.

Gymnastics: *Demonstration and practice,* Miss Taylor, 12 hours.

FEBRUARY — MAY.

Applied Anatomy: *Lecture,* Dr. Abbot, 15 hours.

Personal Hygiene (Pyle): *Recitation,* Miss Luscombe, 8 hours.

Bacteriology and Surgical Technic (Stoney): *Recitation,* Miss McIntosh, 8 hours.

Technic of Asceptic Surgery: *Demonstration and practice,* Miss McIntosh, 10 hours.

MEN: OCTOBER — MAY.

Applied Anatomy: *Lecture,* Dr. Abbot, 30 hours.

Physiology and Hygiene (Hutchison): *Recitation,* Dr. Pease 15 hours.

Hygiene: *Lecture,* Dr. Bond, 8 hours.

Bacteriology: *Lecture,* Dr. Packard, 5 hours.

Hydrotherapy, Zander Apparatus and Electricity: *Demonstration and practice,* Mr. Holmes and Dr. Packard, 10 hours.

Massage: *Demonstration and practice,* Mr. Holmes, 12 hours.

Gymnastics: *Demonstration and practice,* Mr. Holmes, 12 hours.

Housekeeping: *Demonstration and practice,* Mr. Magoon and Head Nurses, 12 hours.

Nursing: *Demonstration and practice,* Mr. Magoon and Head Nurses, 12 hours.

SECOND YEAR.

WOMEN: OCTOBER — MAY.

Nursing: *Lecture,* Dr. Abbot, 30 hours.

Text-book of Nursing (Weeks-Shaw): *Recitation,* Miss McIntosh, 15 hours.

How to Care for the Insane (Granger): *Recitation,* Miss Woodward, 10 hours.

Materia Medica (Stoney): *Recitation*, Dr. Cady, 8 hours.

Medical Gymnastics: *Demonstration and practice*, Miss Taylor, 12 hours.

Hydrotherapy, Zander Apparatus and Electricity: *Demonstration and practice*, Miss Taylor and Dr. Packard, 18 hours.

MEN: OCTOBER — MAY.

Nursing: *Lecture*, Dr. Abbot, 30 hours.

Text-book of Nursing (Weeks-Shaw): *Recitation*, Mr. Magoon, 15 hours.

Drugs and Materia Medica: *Lecture*, *demonstration*, *and practice*, Mr. Burdette, 15 hours.

Technic of Aseptic Surgery: *Demonstration and practice*, Mr. Magoon, 10 hours.

Dietetics and Cookery: *Demonstration and practice*, Miss Swanson, 24 hours.

THIRD YEAR.

WOMEN: OCTOBER — MAY.

Physiology and Hygiene (Hutchison): *Recitation*, Miss Woodward, 8 hours.

Mental Diseases: *Lecture*, Dr. Tuttle, 24 hours.

Handbook for the Instruction of Attendants on the Insane: *Recitation*, Miss Woodward, 5 hours.

Manual of Nursing (Humphrey): *Recitation*, Miss Woodward, 10 hours.

Obstetric Nursing (Fullerton): *Recitation*, Miss Woodward, 10 hours.

Urinalysis: *Lecture*, *demonstration*, *and practice*, 6 hours.

Gynaecology: *Lecture and demonstration*, 10 hours.

MEN: OCTOBER — MAY.

Mental Diseases: *Lecture*, Dr. Tuttle, 24 hours.

How to Care for the Insane (Granger): *Recitation*, Mr. Magoon, 10 hours.

Manual of Nursing (Humphrey): *Recitation*, Mr. Magoon, 10 hours.

Genito-Urinary Diseases: *Lectures*, *demonstration*, *and practice*, 10 hours.

LIST OF HOUSE PUPILS.

Adams, Benjamin Faneuil Dunkin Died 1895.	Surg.	1863
Adams, Charles Goldthwaite Died 1852.	Surg.	1850
Albee, Fred Houdelett 125 West 58th St., New York City.	South Surg.	1904
Alden, Eliot 710 East Madison Ave., Cleveland, Ohio.	West Surg.	1902
Allen, Dudley Peter 1110 Euclid Ave., Cleveland, Ohio.	West Surg.	1880
Allen, Freeman 5 Mt. Vernon Place, Boston.	South Surg.	1900
Allen, Seabury Wells 4 East 41st St., New York City.	West Surg.	1898
Andrews, Thomas Died 1852.	Surg.	1847
Ayer, James Bourne 518 Beacon St., Boston.	Surg.	1872
Badger, George Sherwin Clark 48 Hereford St., Boston.	West Med.	1898
Bain, John Baxter 348 Haverhill St., Lawrence, Mass.	East Med.	1903
Balch, Franklin Greene 279 Clarendon St., Boston.	West Surg.	1893
Baldwin, Henry Cutler 126 Commonwealth Ave., Boston.	East Surg.	1885
Barker, Williston Wright 4 Lyndhurst St., Dorchester, Mass.	West Med.	1908
Barnes, Allen Foster 83 Brattle St., Cambridge.	South Surg.	1903
Barney, Charles Norton Care Surgeon General, United States Army.	West Med.	1896
Barney, George Lawrence Died 1898.	East Surg.	1895
Barney, James Dellinger 384 Commonwealth Ave., Boston.	East Surg.	1905
Barrett, Benjamin Died 1869.	Apothecary	1823
Barrett, Henry Augustus Died 1899.	Med.	1844
Bartlett, Lyman Died 1865.	Med.	1832

Bartol, Edward Francis Washburn	Milton, Mass.	East Surg.	1901
Bartol, John Washburn	1 Chestnut St., Boston.	East Surg.	1891
Bates, Everett Alanson	6 Chestnut St., Springfield, Mass.	East Med.	1891
Beach, Henry Harris Aubrey	28 Commonwealth Ave., Boston.	Surg.	1867
Beal, Howard Walter	55 Pearl St., Worcester, Mass.	South Surg.	1899
Beals, Lynn Staley	134 N. Norwood St., Buffalo, N. Y.	West Med.	1905
Beebe, Arthur Appleton	Died 1900.	East Surg.	1899
Belknap, James Lyman	Massachusetts General Hospital.	West Med.	1904
Bell, Charles	Chester, N. H. ?	Surg.	1854
Benner, Richard Standwood	2 Temple St., Springfield, Mass.	West Surg.	1903
Bertody, Charles	Died 1893.	Surg.	1846
Bigelow, Henry Jacob	Died 1890.	Med.	1838
Bigelow, Leslie Lawson	185 E. State St., Columbus, Ohio.	West Surg.	1908
Binney, Horace	1 Marlboro St., Boston.	South Surg.	1902
Blake, John George	212 Beacon St., Boston.	Surg.	1860
Blake, Samuel Coleman	Died 1897.	Med.	1852
Blanchard, Albert Henry	Sherborn, Mass.	Med.	1850
Blodget, Albert Novatus	51 Massachusetts Ave., Boston.	Surg.	1870
Boos, William Frederick	28 Newbury St., Boston.	West Med.	1902
Booth, Edward Chauncey	40 Boston St., Somerville, Mass.	West Med.	1877
Borland, John Nelson	Died 1890.	Med.	1850
Boutelle, James Thacher	Hampton, Va.	Surg.	1870
Boutwell, Henry Thatcher	164 Myrtle St., Manchester, N. H.	Surg.	1869
Boutwell, Horace Keith	483 Beacon St., Boston.	East Med.	1905

Bowditch, Henry Ingersoll Died 1892.	Med.	1830
Bowditch, Vincent Yardley 506 Beacon St., Boston.	East Med.	1879
Bowen, John Templeton 14 Marlboro St., Boston.	West Med.	1883
Bradford, Edward Hickling 133 Newbury St., Boston.	Surg.	1872
Brannan, John Winters 11 West 12th St., New York City.	East Surg.	1878
Brewster, George Washington Wales 277 Clarendon St., Boston.	East Surg.	1893
Bridge, Horatio Paoli, Ind.	Med.	1870
Briggs, Charles Edwin 118 Lenox Bldg., Cleveland, Ohio.	East Surg.	1898
Briggs, Frederick Melancthon 31 Massachusetts Ave., Boston.	East Surg.	1884
Bright, George Adams	Med.	1859
Brooks, William Allen 167 Beacon St., Boston.	East Surg.	1892
Broughton, Arthur Nicholson 10 Roanoke Ave., Jamaica Plain, Mass.	South Surg.	1898
Brown, Dillon 28 West 59th St., New York City.	West Surg.	1885
Brown, Francis Henry 28 State St., Boston.	Med.	1860
Brown, Lloyd Thornton 70 Elm St., Worcester, Mass.	South Surg.	1908
Buckingham, Edward Marshall 342 Marlboro St., Boston.	West Surg.	1874
Buffum, William Henry Benefit St., Providence, R. I.	East Med.	1903
Bullard, William Norton 89 Marlboro St., Boston.	East Med.	1880
Bumstead, Freeman Josiah Died 1879.	Surg.	1850
Burlingham, Louis Herbert Massachusetts General Hospital.	West Med.	1907
Burnett, Francis Lowell Elmwood, Cambridge, Mass.	South Surg.	1908
Burnett, Waldo Irving Died 1854	Med.	1849
Burnham, Elmond Arthur 154 Huntington Ave., Boston.	West Med.	1893
Burrage, Thomas Jayne 139 Park St., Portland, Maine.	East Med.	1904

Bush, John Standish Foster 651 Boylston St., Boston.	East Surg.	1874
Butler, Charles Shorey 257 Newbury St., Boston.	East Surg.	1899
Butler, Joel Ives 26 Maple St., Springfield, Mass.	South Surg.	1905
Cabot, Arthur Tracy 1 Marlboro St., Boston.	West Surg.	1876
Cabot, Hugh 87 Marlboro St., Boston.	South Surg.	1899
Cabot, Richard Clarke 190 Marlboro St., Boston.	East Med.	1894
Capps, Joseph Almarin 100 State St., Chicago, Ill.	East Med.	1896
Carney, Sidney Howard Sailors' Snug Harbor Hospital, New Brighton, Staten Island, N. Y.	Med.	1860
Caryl, Lucian Willard Died 1837.	Surg.	1829
Chadbourne, Arthur Patterson 193 Beacon St., Boston.	East Med.	1890
Chadwick, James Read Died 1905.	Surg.	1870
Chamberlain, Weston Percival Care Surgeon General, United States Army.	West Med.	1898
Chandler, Norman Fitch 27 High St., Medford, Mass.	West Med.	1888
Channing, Walter Channing Sanatorium, Brookline, Mass.	Surg.	1871
Chapin, Lawrence Dudley 20 Maple St., Springfield, Mass.	East Med.	1908
Chase, Henry Melville 409 Marlboro St., Boston.	West Surg.	1902
Chauncey, Charles William Died 1864.	Apothecary	1823
Churchill, Frank Spooner 439 N. State St., Chicago, Ill.	West Med.	1891
Chute, Arthur Lambert 350 Marlboro St., Boston.	South Surg.	1895
Clap, Edmund Wright 222 Marlboro St., Boston.	East Med.	1895
Clark, George Oliver 142 Beacon St., Boston.	East Surg.	1904
Clark, John Howe Amherst, N. H.	Med.	1861
Clark, Joseph Payson 71 Marlboro St., Boston.	East Surg.	1887
Clark, Nelson Henry 131 N. Highland Ave., Pittsburg, Pa.	West Med.	1905
Cobb, Farrar 317 Marlboro St., Boston.	East Surg.	1893

Codman, Ernest Amory 227 Beacon St., Boston.	East Surg.	1895
Cogswell, William 1069 Boylston St., Boston.	South Surg.	1896
Conant, William Merrit 486 Commonwealth Ave., Boston.	West Surg.	1884
Cooke, Henry Arnold 234 Benefit St., Providence, R. I.	East Med.	1897
Coolidge, Algernon, Jr. 613 Beacon St., Boston.	East Surg.	1886
Coolidge, Frederick Shurtleff 103 State St., Chicago, Ill.	West Surg.	1891
Cooper, Charles Wendell Died 1897.	West Surg.	1877
Cotton, Frederick Jay 425 Marlboro St., Boston	West Surg.	1894
Coues, William Pearce 261 Beacon St., Boston	West Surg.	1895
Crandell, Arthur Richmond 67 Spring St., Taunton, Mass.	South Surg.	1898
Crane, Phineas Miller Died 1882.	Apothecary	1826
Crosbie, Arthur Hallam 29 Commonwealth Ave., Boston.	East Surg.	1907
Cummin, John White 9 Massachusetts Ave., Boston.	South Surg.	1897
Curtis, Hall Died 1906.	Surg.	1856
Cushing, Edward Fitch 3849 Prospect Ave., Cleveland, Ohio.	East Surg.	1888
Cushing, Edward Fitch 3849 Prospect Ave., Cleveland, Ohio.	West Med.	1890
Cushing, Harvey Williams 107 East Chase St., Baltimore, Md.	South Surg.	1897
Cushing, Joseph Whitney Died 1897.	Surg.	1860
